Barnsley Metropolitan Borough Council
Reference PP-04896622

The proposal is to replace existing underground 12000 Litre diesel tank with a 6000 Litre diesel storage tank.

The diesel tanks are needed to power the emergency generator to enable services to be maintained in an emergency.

The tanks will comply with PPG2 legislation.

The tank will be fully bunded. The brick outer wall is for cosmetic purposes and fire isolation.

The existing underground 12000 Litre will be removed once the new 6000 Litre tank is installed and operational.
