Planning application for covered manure store.

The store is required to comply with DEFRA NVZ regulations and to maximise the crops nutrient intake when applied at key growing times during the year. This in turn will reduce the need for artificial fertiliser on the land.

To be designed and built to comply with environment agency SSAFO regulations using steel reinforced concrete floor and walls. Natural grey fibre cement roof to avoid water dilution and nutrient loss of the manure.

The store will be of similar appearance to the existing farm buildings ie. General design, roof colour, Yorkshire board side cladding etc.
