## Executive Summary

---

- i. A Preliminary Ecological Appraisal of the site was conducted in February 2014
- ii. The site habitat appears to have low intrinsic ecological value but may be valuable for lower plants (to be verified).
- iii. The site is expected to contain some protected species and Phase II surveys are recommended for the 2014 season to determine these.
- iv. There is potential to offer habitat connectivity/biodiversity gains on the peripheries of the site in conjunction with local biodiversity initiatives.

## 1.0 Introduction

---

### 1.1. Commission

- 1.1.1. Enzygo Ltd was commissioned to conduct a preliminary ecological appraisal (PEA) for the proposed Houghton Main Renewable Energy Park (REP) including the erection of an Anaerobic Digestion Facility (AD) and a Timber Resource Recovery Centre (TRRC) on land off Houghton Main Colliery Roundabout on the A6195, Park Spring Road. A previous Phase I Habitat Surveys have been conducted by SLR consulting Ltd, on behalf of Peel Environmental Management Ltd in March 2012.
- 1.1.2. The site was surveyed by Enzygo in February 2014. This was outside the normal timing window of May to September but was commissioned to refresh the 2012 SLR report whose shelf-life would otherwise expire and to check for any pronounced change in ecological base condition since March 2012.

### 1.2. Site Details

- 1.2.1. The approximate site centre is located on National Grid Reference SE 41693 06444, near Little Houghton, South Yorkshire, and at the far south-eastern point of the former Houghton Main Colliery site. The nearest postcode centre to the site is S72 0HN. The site was previously used for open cast mining up to 2001. Since the cessation of works a valid re-use of the site has been sought.

**Photograph 1: View of the site, towards the north-east.**

- 1.2.2. The northern boundary of the site is comprised of a dismantled colliery railway, boarded by a sparse, specie-poor, immature hedgerow. The eastern edge of the site is comprised of wire

fence and immature blackthorn hedge which separates the site from the A4195 (Park Spring Road). The south of the site is boarded partly by a new electricity generating compound, which utilises the same access point as the proposed site. Finally the western border of the site is made up of fencing and an intact hedgerow.

- 1.2.3. Beyond the site runs the River Dearne, at the north western corner of the site.
- 1.2.4. Beyond the immediate peripheries, the site is boarded by arable grassland (to the west) and a Dearne Valley RSPB reserve to the north, separated from the site by a small semi improved grassland field, with sparse scrub and plantation woodland. Towards the east is a large, and well used warehouse/distribution centre.
- 1.2.5. The sites proposed red-line boundary of the site is shown on **Figure 1.1**.

**Figure 1.1 Red-line boundary of the proposed development site.**

- 1.2.6. A 1:7176 scale habitat map based upon the conventions of the JNCC Phase 1 Habitat Survey<sub>1</sub> is attached in *Appendix 1* of this report.
- 1.2.7. The site was assessed outside the normal timing window that would be considered optimal for the conduct of this type of evaluation (April to September) so the survey is constrained as some vegetation would not be visible at the time of survey.

***Photograph 2: View of the site and neighbouring electricity generating compound, towards the south.***

**Photograph 3: View of the dismantled railway, forming the northern boundary.**

Peterborough. ISBN 0-86139-636-7*

## 2.0 METHODOLOGY

---

### 2.1 Survey Details

- 2.1.1 The site was surveyed on 4<sup>th</sup> February 2013 The site was visited and the vegetation was mapped onto an Ordnance Survey Mastermap (scale 1:7176) using standard colour codes for the ninety plus specified habitat types as defined in the JNCC guidelines. The surrounding land was similarly mapped but third-party land was only accessed where open and is assessed on the basis of what could be viewed from publically accessible areas.
- 2.1.2 Target notes were made for particular areas of interest and annotated.
- 2.1.3 An ecological walkover survey of the site was also conducted. The survey looks for direct and indirect evidenced (through sightings or field signs) of protected species and speculates on likely presence based upon habitat type and quality.
- 2.1.4 In addition to the ecological walkover survey, the presence of flora included within Schedule 9 of the Wildlife and Countryside Act 1981) (as amended) was investigated on site.

### 2.2 Enzygo Ltd Ecology Experience

- 2.2.1 This study and the site survey were conducted by Kirsty Rogers MZoo GradCIEEM under the management of Christopher Formaggia BSc (Joint Hons) CBiol CEnv MBS MIEEM MBPR (aquatic) – Director of Ecology. The Director of Ecology has been a professional ecologist for 22 years both as a regulator and consultant. He has held senior positions in environmental protection and management and is an experienced field ecologist. A CV describing his experience is provided in *Appendix 2*.

### 2.3 Survey Objectives

- 2.3.1 On the basis of the brief provided by the client Enzygo Ltd has conducted an ecological study:
- To determine the baseline ecological value of the site.
  - To determine the baseline ecological constraints that might require further evaluation with respect to any site development.
  - Advice on further ecological evaluation that might be necessary.

### 2.4 Survey Area

- 2.4.1 The appraisal has considered the whole of the site and its immediate peripheries where visible/accessible.

## 3.0 RESULTS

---

### 3.1 Phase 1 Habitat Mapping

- 3.1.1 The completed Phase 1 Habitat map is presented in *Appendix 1*.
- 3.1.2 The overall area of the site is approximately 4.14 Hectares.
- 3.1.3 There is an approximate 45% covering of scattered scrub (**A2**) on site. The dominant species is immature silver birch (*Betula pendula*), with occasional examples of goat willow (*Salix caprea*) and oak species (*Quercus*) scattered throughout.
- 3.1.4 The second prominent habitat on site is restored poor semi-improved grassland (**B6**) across around 40% of the site.
- 3.1.5 There is approximately 0.12 hectares of broadleaved woodland (**A1**) in the far north-western corner of the site comprised of crack willow (*Salix fragilis*), hawthorn (*Crataegus monogyna*), blackthorn (*Prunus spinosa*) and small quantities of elder (*Sambucus nigra*). The understory was comprised predominantly of bramble (*Rubus fruticosus*) and common nettle (*Urtica dioica*).
- 3.1.6 Towards the centre of the site there is a small area (approximately 5%) of acid flush (**E2.1**) comprised of species of sphagnum moss (*Sphagnum sp.*) and bulrush species (*Typha sp.*)

**Photograph 4: View of the acid flush.**

- 3.1.7 Immediately alongside the northern boundary is an area (~0.71 hectare) of mature semi natural broadleaved woodland, situated between the proposed site and the River Dearne. The woodland was comprised of similar species as the area of woodland on site, with occasional mature silver birch and ash (*Fraxinus excelsior*).

- 3.1.8 The western border of the site is comprised of hedgerow with trees (**J3.2**) emerging from woodland at its northern most point and becoming increasingly defunct towards the south of the site. The hedgerow is comprised both mature and immature specimens of silver birch, goat willow, oak, elder, hawthorn, blackthorn and hazel (*Corylus avellana*).
- 3.1.9 The eastern border of the site is made up of defunct immature hedge (**J2.2**) comprised of chiefly of blackthorn (*Prunus spinosa*).
- 3.1.10A small section to the south of the site, surrounding the electricity generating compound, is made up of introduced shrub (**J1.4**).
- 3.1.11The wider habitat includes areas of plantation woodland (**A1**) at the sites north eastern corner, standing water (**G1**), running water (**G2**) (River Dearne) and semi-improved grassland.

### **3.2 Habitat Quality Assessment**

- 3.2.1 The majority of the site comprises of land of relatively low ecological value (restored poor semi-improved grassland, and encroaching scrub).
- 3.2.2 The woodland that borders areas of the site is generally uniform in age structure.
- 3.2.3 A number of small ponds are within a 500m boundary of the site, one of which is considered in a good condition and has the potential to support great crested newts (*Triturus cristatus*), (see *Appendix 4* for HIS scores).
- 3.2.4 The hedgerow along the west of the site is generally intact although patchy in places. In places the hedgerow is more species rich but lacks management. It is considered a few sections of hedge would likely qualify as “important” under the biological element of the Hedgerow Regulations (1997).
- 3.2.5 The patch of acid rush in the centre of the site is not ecologically important.

### **3.3 Desk Study**

- 3.3.1 A 2km interrogation of the DEFRA Magic database and Barnsley Biological Records Centre (see *Appendix 3*) revealed the following nationally important designated sites:
- West Haigh Wood at ~1.6km from the proposed site boundary, designated as a Local Nature Reserve (**LNR**).
  - Carlton Main Brickworks, located approximately 1.3 km from the proposed site boundary, designated as a geological Site of Special Scientific Interest (**SSSI**).

**Note:** There are also 4 further Natural Heritage Sites (Barnsley) which are of county importance, with the 2km search area. These are; Edderthorpe Ings (~0.2km from the site boundary), Sunny Bank, Horse Carr and Storrs wood (~1.1km to the west of the site boundary), a section of West Haigh Wood (~0.9 km from the site boundary) and Houghton Marsh (located ~ 0.9km south of the proposed site boundary).

### 3.4 Protected Species Audit

#### Bats

3.4.1 There is limited roosting potential within the site itself due to the immaturity of the trees located throughout; however there is some potential within the wider environment and immediate habitats. The mature woodland at the northern boundary of the site and beyond the site boundary has potential for bat roosts in the form of old woodpecker holes, cracks and crevices. There is also roost potential for bats within the bridge over the River Dearne and limited potential for bats within the electricity compound to the south of the site.

**Photograph 4: View of mature woodland with woodpecker holes (highlighted).**

There are 15 records of bat species within the 2km search buffer from the sites peripheries, 7 of the records are made up of pipistrelle species (*Pipistrellus spp.*) sightings, the most recent in 2005. There is also one record of a noctule bat (*Nyctalus noctula*) and a record of a Daubenton's bat (*Myotis daubentoni*) within the buffer area; both were noted over a decade ago. The remaining records are comprised of bat records which could not be identified to species level.

#### 3.5.1. Birds

With the site boundaries a number of nests seen within the hedgerows, introduced shrub and scrub on site expected to contain nesting common farmland birds. A number of species were seen on site Eurasian magpie (*Pica pica*), European robin (*Erithacus rubecula*), great tit (*Parus*

*major*), blue tit (*Cyanistes caeruleus*), herring gull (*Larus argentatus*), wood pigeon (*Columba palumbus*) and jackdaw (*Corvus monedula*) on the site during the survey period.

The site offers a good range of habitats for nesting bird species, particularly the peripheries. The wider environment is considered of national and county importance for a large number of bird species. Within the 2km buffer zone, there are over 250 records of 28 bird species that are included on the “Birds of conservation concern 3”<sup>2</sup> red list and 700 records of 67 bird species noted on the amber list (see *Appendix 3, Table 3.2 and 3.3* for full summary).

### 3.5.3. Badgers

The site itself offers few resources to support a badger (*Meles meles*) population. No setts were located on site. Further there was limited secondary evidence to suggest a badger population is utilising the site, such as no obvious scratching posts, signs of foraging, dung and latrines or badger hairs in caught in any of the boundary fences. There was evidence of animal tracks and paths cutting from the south to east of the site (see *picture 5*) however this cannot be confidently identified to species level.

There are no records of badgers within the 2km buffer zone of the site area.

**Picture 5: View of animal track/ path cutting across the site from the south entrance towards the eastern border.**

<sup>2</sup> Eaton MA, Brown AF, Noble DG, Musgrove AJ, Hearn R, Aebischer NJ, Gibbons DW, Evans A and Gregory RD (2009) Birds of Conservation Concern 3: the population status of birds in the United Kingdom, Channel Islands and the Isle of Man. *British Birds* 102, pp296–341.

### 3.5.4. Riparian species

The site itself offers no suitable habitat for riparian species; however there are 32 records of water vole (*Arvicola terrestris*) along the river Dearne, within the 2km buffer of the site

boundary (the most recent in 2012) and a further 4 records of otters (*Lutra lutra*) within the same area.

#### 3.5.5. Reptiles

The site offers areas of good quality reptile habitat (rough grassland, hedgerows and scrub habitat), with good connections to further suitable habitat, through the dismantled rail corridor and the river Dearne riparian corridor.

The data search provide a single record of a reptile, viviparous lizard (*Lacerta vivipara*) within 2km of the site, this was approximately 1km away from the site boundary directly along the rail corridor.

#### 3.5.6. Amphibians

The site itself contains no waterbodies, or habitats which are suitable to support breeding amphibians. However, there are 5 waterbodies in 500m of the site boundary, one of which holds a high HIS score (see *SLR Phase 1 Habitat Survey, 2012*) which hold potential to support a number of amphibian species. The site does offer rough grassland, hedgerows and scrubland which may be attractive terrestrial habitat for some amphibians.

There are 12 records of amphibians within the 2km buffer area of the site, 5 records of common toad (*Bufo bufo*), 2 records of common frog (*Rana temporaria*) and 5 records of smooth newt (*Triturus vulgaris*)

### 3.6. Recommendations

#### 3.6.1. It is recommended on the basis of this survey that the following further works should follow:

- *Bat Activity Survey*

Although none of the trees with the site are mature enough to support bat species, a number of trees alongside the survey boundary hold potential to sustain a number of roost spaces for various bats species. It is recommended to conduct a bat activity survey over the site for 3 evenings over 3 months, between the months of April to September to assess the significance of the site for neighbouring bats.

- *Badger Survey*

Even though neither the site nor its boundaries hold any badger setts, the site holds potential for badger species with limited evidence to support the potential for badger activity within the site. It is recommended to conduct a full badger survey, which will comprise of a walkover of the sit to inspect for signs of badger use (such as; badger setts, bedding materials, scratching posts, badger hairs, signs of foraging, dung and latrines and/or badger tracks and paths) or the suitability of any entrance holes to support badger setts and/or locate any setts present or near to the construction footprint. The optimal survey period for a badger survey is between March to November, and should be conducted within 6 months of the start date of construction.

In the event of a badger sett being identified within the site, a licence application would be required and submitted prior to works to avoid committing an offence under the Protection of Badgers Act 1992.

- *Breeding bird Survey*

A number of bird's nests were located across the sites boundary hedgerows, with a number of birds seen over the during the survey period. A breeding bird survey is advised to be conducted in 2014 to inform the proposal.

- *Reptile Survey*

Due to the suitable habitat found throughout the site to support reptile species, it is recommended that a comprehensive reptile survey is conducted in order to assess the sites appeal for reptile species. Typically the optimum survey period to assess reptile activity would be between April to May and September. The survey would consist of a number of checks to artificial refugia placed throughout the site during the survey period to assess the presents of a population and the population density within the site.

In the event of the discovery of a reptile population of site, a licence application would be required and submitted prior to works to avoid committing and offence under the Wildlife and Countryside Act 1981, in order to conduct mitigation works.

- *Great Crested Newt Survey*

Although the site itself does not contain any waterbodies, 5 waterbodies were identified during SLR's 2012 survey of the site. Upon assessment, only one of the waterbodies was identified to hold potential for supporting great crested newts (*Triturus cristatus*). However, it is recommended that if third party access can be gained that eDNA tests of the ponds be conducted to determine presence/absence of the species.

- *Problematic Species Survey*

It is also recommended to conduct a complete Problematic Species Survey within the site. During SLR's 2012 Phase 1 Assessment, a quantity of Himalayan balsam (*Impatiens glandulifera*) was recorded along the peripheries of the site. A further survey is encouraged to assess the full quantity and the potential for its encroachment on to the site. Due to the free access to the site from the A6195 (Park Spring Road) at both the south east and north east corners of the site, the survey will also identify any other problematic species (e.g. Japanese knotweed, *Fallopia japonica*) which may have been introduced to the site through fly tipping or recreational activities.

## 4.0 CONCLUSIONS

---

- i. The proposal site is surrounded by land of agricultural value. The relative nature conservation value of the proposal site appears to be low and the site is considered to contain habitats and flora that are at most of local nature conservation significance, although this assessment will be revised after a full survey for lower plant species is undertaken in the summer of 2014.
- ii. There are important ecological areas on the immediate peripheries of the site including an RSPB nature reserve. Locally there are environmental initiatives underway to maximise the value of important habitat in the area. It may be possible to offer habitat linkage opportunities through planting on site.
