Executive Summary

Appointment	<p>In October 2020 Curtins were instructed by Mace Group to undertake a Phase 1 Preliminary Risk Assessment for the Sci-Tech Centre at Barnsley College, Falcon Street, S70 2EY. The site is centred on NGR SE345067 and covers an area of approximately 0.26 Ha.</p> <p>The Phase 1 is intended to provide an overview of the geo-environmental and geotechnical setting of the site in support of an anticipated planning application. Development proposals comprise the conversion of an existing (exposed) undercroft beneath the existing Sci-Tech Centre into an internal space for office and teaching use, with the potential for a small extension also.</p>
Current Site Status	<p>The site is currently occupied by the existing Sci-Tech Centre, which is a 4-storey building with an exposed undercroft car park. The site gently slopes west to east and is covered by the existing building, hard standing car park and Falcon Street on the western side.</p>
Site History	<p>The earliest mapping (1852) shows the site is undeveloped farmland. By the 1880s, railway sidings are mapped along the eastern side, with tanks mapped directly northeast.</p> <p>The site is developed by the 1930s, named as Falcon (Gas Meter) Works, and the railway sidings and tanks are no longer mapped on the eastern boundary. Throughout the 1960s and 70s, the site undergoes the construction and demolition of smaller buildings; and is referred to as a Factory and then a Timber Yard.</p> <p>By the mid-1980s, the site is a part of what will become Barnsley College. The current building is constructed circa 2004; and refurbished in 2020.</p>
Geology	<p>Made Ground is indicated to be present along the eastern boundary on BGS mapping, associated with the historical railway lines. It is anticipated that made ground will be present across the site due to periods of industrial site use and phases of construction and demolition of buildings.</p> <p>Published mapping indicates the site is underlain by Kent's Rock sandstone bedrock, part of the Pennine Middle Coal Measures Formation. No superficial deposits are recorded, although weathered sandstone may be encountered. A local BGS borehole log 60m south records competent bedrock from 2.65m bgl (102.10m AOD).</p> <p>The site is situated in a coal mining reporting area; however, it is not within a development high risk area. There are BGS recorded mineral sites located 328m north west (Barnsley Colliery) and 496m north (Honey Well Colliery), both recorded as deep underground coal mines and have ceased operations. The nearest recorded mine entries are located approximately 175m northwest, and the nearest coal outcrop is approximately 80m southeast, dipping to the east. A Low risk is identified to the proposed development from coal mining legacy and no further action is required.</p>
Hydrogeology	<p>The Kent's Rock bedrock is designated as a Secondary A Aquifer. The site is not located within a Source Protection Zone (SPZ) and there are no groundwater extraction points located within 750m of the site.</p>
Hydrology	<p>The nearest surface water feature is a pond 249m north of the site at Barnsley College Construction Centre.</p> <p>There have been no pollution incidents to controlled waters and there are no discharge consents granted within 500m and 300m of the site respectively.</p> <p>The nearest surface water abstraction point is 625m east where surface water is used for cooling.</p>
UXO	<p>Risk mapping for UXOs has placed the site in a Low risk area and historic mapping records no ruins post WWII on site or locally.</p>
Initial Ground Contamination Assessment	<p>The health risk posed to site end users and construction workers by onsite sources of contamination via direct contact, ingestion, inhalation is assessed as Moderate / Low due to historical industrial land uses on site and periods of construction and demolition, but taking into account time since potentially contaminative incidents have taken place, that the building footprint will break the S-P-R linkage and accounting for suitable PPE during groundworks.</p> <p>The risk of pollution of groundwater and surface water receptors by onsite sources of contamination via vertical/horizontal migration through site soils is assessed as Low and Very Low respectively, owing to the absence of a Source Protection Zone, abstraction points within 750m and a sensitive surface water receptor.</p>

	<p>The chronic health risk posed to site end users by on and offsite soils with the potential to generate ground gases via vertical and horizontal migration through the underlying deposits is assessed as Moderate / Low, taking into account anticipated shallow bedrock and distance to closest landfill.</p>
Recommendations	<p>In summary the following recommendations are made:</p> <ul style="list-style-type: none">• Undertake an intrusive ground investigation;• Undertake a GQRA as part of the ground investigation; and• Undertake Ground Gas monitoring if observations from encountered ground conditions determine requirement. <p>It is further recommended that this work is completed in advance of any development works taking place and could be undertaken in conjunction with a geotechnical investigation</p>

1.0 Introduction

1.1 Project Background

In October 2020, Curtins were instructed by Mace Group to undertake a Phase 1 Preliminary Risk Assessment for the Sci-Tech Centre at Barnsley College, Falcon Street, Barnsley, S70 2EY.

The site is centred on NGR SE345067 and covers an area of approximately 0.26 Ha. A site location plan is contained within *Appendix A*.

1.2 Scope of Services

The Phase 1 is intended to provide an overview of the geo-environmental and geotechnical setting of the site in support of an anticipated planning application.

Development proposals comprise the conversion of an existing (exposed) undercroft beneath the existing Sci-Tech Centre into an internal space for office and teaching use, with the potential for a small extension also.

Current development plans are contained within *Appendix A*.

Through this overview the Phase 1 aims to develop both a working conceptual and ground model for the site, as well as present an initial assessment of any risks that could be presented to the development including its intended end users and the wider environment.

Specifically, the Phase 1 provides an initial assessment of the site with regard to:

- a) Potential contamination of the site strata by historical and or current use;
- b) The potential impact on the wider environment by historical and or current use of the site of interest;
- c) The potential impact from surrounding land uses and other environmental factors;
- d) Potential problems associated with geological features such as faulting, mineral extraction, mining and land instability;
- e) The location of apparent sub-surface structures and obstructions that may affect the proposed redevelopment; and
- f) The location of above-surface features that may affect the proposed redevelopment.

Consideration of detailed flood risk, ecology and archaeological issues are outside of the scope of this report

2.0 Current Site and Surrounding Area Details

2.1 Site Location and Current Details

A site description is in *Table 2.1* and a site location plan is shown in *Figure 2.1* below.

Table 2.1 – Site Details

Site Address	Sci-tech Centre, Falcon Street, Barnsley S70 2EY
NGR	SE345067
Area of Site	Approximately 0.26 Ha
Current Site Use and Description	<p>The site is currently occupied by the existing Barnsley College Sci-tech Centre, which is a 4-storey building with an exposed undercroft car park. A Bridge Link exists between the building's first storey and the Electric Theatre to the west which is at a higher elevation.</p> <p>The site gently slopes west to east and is covered by the existing building footprint and hard standing.</p>

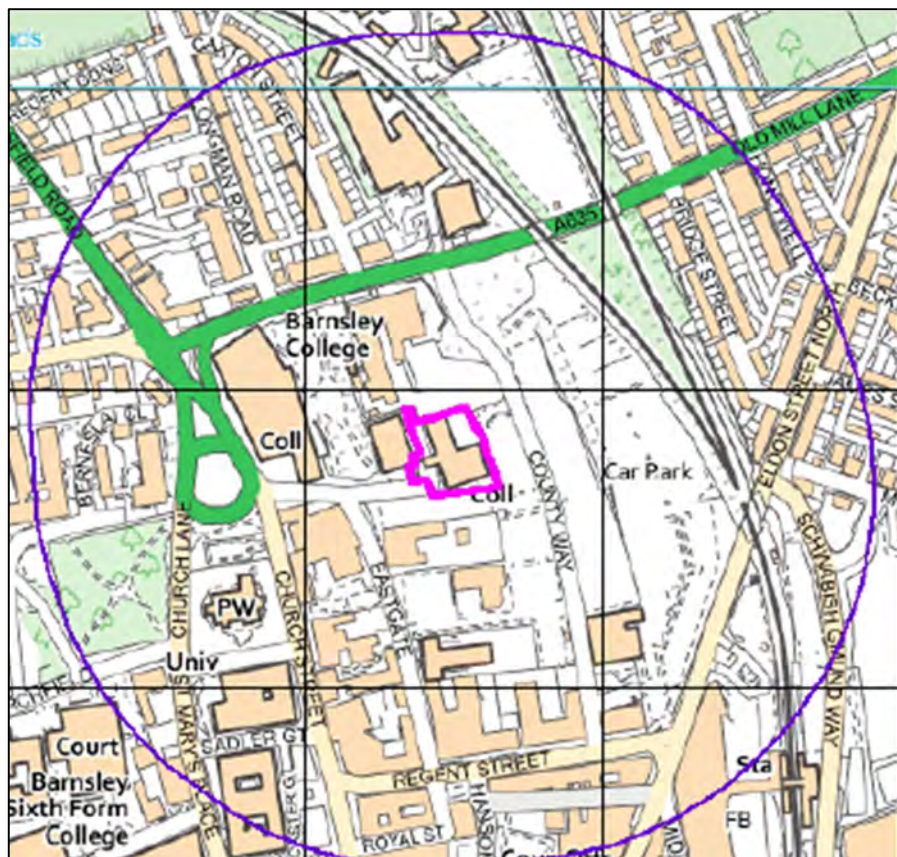

Figure 2.1 – Site Location Plan (site boundary shown in pink and 250m buffer in purple).

2.2 Surrounding Area Details

The following information was also established through undertaking an environmental database search (Ref.1) included in *Appendix B*.

Table 2.2 – Surrounding Area

Surrounding Area	N	Surface car parking and buildings associated with Barnsley College. Residential properties north of Old Mill Lane.
	E	Surface car parking associated with the college, two railway lines from 130m east with residential properties beyond
	S	Surface car parking and buildings associated with Barnsley College; with commercial properties related to Barnsley town centre beyond
	W	Buildings associated with Barnsley College, Church St., St Mary's Church and Peace Gardens from 100m west

3.0 Site History

A review of the available historical mapping and other information for the site, as presented within the Envirocheck report (Ref. 1), has been undertaken and is presented in *Table 3.1* below.

Table 3.1 – Previous Site and Surrounding Area Uses and Potential Sources of Contamination (onsite uses are indicated in **bold)**

Date	Description	Potential Sources of Contamination
1852 – 1855	<p>The site is occupied by agricultural land, with a hedgerow aligned generally east-west across the centre of the site.</p> <p>Railway lines, sidings, a goods shed, cranes and associated railway infrastructure are located from 60m east. Buildings and industries associated with Barnsley town are located from 60m west, including St Marys Church and Burial Ground. Industries from 100m west include timber yards and Barnsley Colliery 250m northwest.</p>	<ul style="list-style-type: none"> Limited potential for contamination from historical site activities.
1889 – 1907	<p>The site remains predominantly agricultural, with the east-west aligned hedgerow removed by this time. A new boundary line exists along the eastern side of the site, with the eastern area a part of the railway-associated land to the east. A small building is mapped in the centre of the eastern boundary and railway sidings in the south-eastern corner.</p> <p>The railway lines and sidings have extended westwards into the site, with additional goods sheds, cranes and cuttings constructed east and southeast. Court House Station is constructed 100m southeast. The burial ground 150m west is now mapped as disused. A Timber Yard is located 80m south. The area 250m northwest previously mapped as Barnsley Colliery has been redeveloped as housing.</p> <p>Mapping from 1906 and 1907 shows tanks located within 20m of the north-eastern corner of the site. Further residential development of the surrounding area continues into the early 20th Century.</p>	<ul style="list-style-type: none"> Deposition of made ground of unknown composition associated with the construction of railway lines and associated buildings and infrastructure along the eastern area of the site and to the east. Potential for leaked fluids from the tanks containing unknown material to the northeast, migrating southwards onto the site.
1931 – 1956	<p>The site has been developed, with Falcon Works (Gas Meter & co) constructed in the centre of the site. A small building is also mapped in the southeast corner. The railway sidings no longer extend into the site. A tank is shown to be 50m north of the boundary, with the tanks directly northwest of the site in 1906 no longer mapped.</p> <p>Development of the land directly north and south of the site has continued, with a Mines Rescue Station and Drill Hall constructed respectively. Builders Yards are located directly west and south.</p>	<ul style="list-style-type: none"> Deposition of made ground of unknown composition associated with the construction of a Gas Meter Works on site Deposition of made ground of unknown composition arising from the industrial land use of the site as a Gas Meter Works. Deposition of made ground of unknown composition associated with the removal of railway sidings from the eastern area of the site.

Date	Description	Potential Sources of Contamination
1960 – 1977	<p>1960s mapping names the site as a factory, with the two smaller buildings in the east and south-eastern areas of the site no longer shown. The main building looks to have been extended eastwards and southwards. Falcon Street is named and occupies the western area of the site. By the 1970s, the site is named as a Timber Yard and some small buildings have been added along the northern boundary.</p> <p>Some redevelopment of the local area has occurred to the west, with land cleared and a College of Technology constructed. The tanks are no longer shown north of the site by the 1960s.</p> <p>From the 1970s, the railway sidings, cranes and Court House Station have all been removed north east, east and south east of the site. The Goods Sheds remain as Corporation Depots. A scaled-back railway line is now located from 250m northeast. A Printing Works is located 50m west. Further buildings have been added to the College of Technology to the northwest.</p>	<ul style="list-style-type: none"> • Deposition of made ground associated with demolition of small buildings on site and the construction of extensions to the main building and new buildings on the northern boundary. • Deposition of made ground associated with the builder's yard to the west and Falcon Street constructed on the western side of the site.
1986 – 1999	<p>The site is named as a College of Technology, with the main building unchanged in footprint. The small buildings along the northern boundary have been demolished and others constructed.</p> <p>The former railway land to the east has been redeveloped as Council Offices and car parks. Some redevelopment of the surrounding area continues.</p>	<ul style="list-style-type: none"> • Deposition of made ground of unknown composition associated with demolition and construction works on site as the building is transformed from a timber yard to a college.
1999 – 2003	<p>The site is cleared of all structures and remains vacant.</p>	<ul style="list-style-type: none"> • Deposition of made ground of unknown composition associated with demolition of the buildings.
2003 – Present	<p>The site is redeveloped, with the Sci-tech Centre constructed and opened in 2004 as a part of Barnsley College; with a bridge linking the first floor to the college building to the west, over Falcon Street. The building undergoes refurbishment and reopens in September 2020, with an undercroft car park. An electrical substation is located in the south-eastern corner of the site.</p> <p>The builders yard directly west is redeveloped as a college building.</p>	<ul style="list-style-type: none"> • Deposition of made ground during construction of new college building on site. • Spillages/leakages of fuel oils from cars parked on site.

Potential sources of onsite contamination are further discussed in *Section 7.0*. Potential sources of contamination above not considered likely to impact the site have been discounted from the Preliminary Conceptual Site Model.

4.0 Geology, Hydrogeology and Hydrology

4.1 Geology and Hydrogeology

A study of the Envirocheck records (Ref. 1), BGS online borehole records (Ref. 2) and British Geological Survey (BGS) 1:50,000 mapping records (Solid and Drift Editions) for Barnsley (Sheet 087) (Ref. 3) indicates the following geological and hydrogeological succession underlying the site:

Table 4.1a – Geological/Hydrogeological Succession

Geology	Associated Hydrogeological Classification
Made Ground (Undivided) ¹	N/A
Kent's Rock ²	Secondary A Aquifer ³

1. BGS mapping indicates Made Ground is present along the eastern boundary, associated with the historical railway land. However, given the historical industrial land use and periods of construction and demolition across the site, it is considered likely that Made Ground deposits will be present across the remainder of the site.

2. Sandstone, circa 10m thick, forms a part of the Pennine Middle Coal Measures (PMCM) Formation. The PMCM contains interbedded grey mudstone, siltstone, pale grey sandstone and common coal seams.

3. Permeable layers capable of supporting water supplies at a local rather than strategic scale, and in some cases forming an important source of base flow to rivers. These are generally aquifers formerly classified as minor aquifers;

BGS mapping does not record any superficial deposits on or local to the site. However weathered bedrock recovered as sand may be encountered.

The site is not located within a Source Protection Zone and there are no groundwater abstraction points located within 750m of the site boundary.

There are no BGS recorded boreholes on site. One available borehole log is available, located approximately 60m south and undertaken for the Court House Station Site in 1977. The details of which are summarised in Table 4.1b.

Table 4.1b – Historical Borehole Records from the Surrounding Area

Borehole Ref.	Location (Easting, Northing)	Details (depth to top of strata/lithology/thickness)
SE30NW41/A	60m south (434508, 406662)	0.00m bgl (104.75m AOD) MADE GROUND: Dense bituminous macadam (0.08m) 0.08m bgl MADE GROUND: Red shale (0.42m) 0.50m bgl MADE GROUND: Black ash (0.50m) 1.00m bgl Light brown iron-stained fine grained highly weather SANDSTONE (0.80m) 1.80m bgl Light brown iron-stained fine grained weathered SANDSTONE (0.85m) 2.65m bgl Hard light brown heavily iron-stained fine grained fractured SANDSTONE with heavily iron-stained vertical and horizontal joints (1.95m)

Borehole Ref.	Location (Easting, Northing)	Details (depth to top of strata/lithology/thickness)
		4.60m bgl Hard light brown-grey iron-stained very fine grained silty flaggy thinly bedded SANDSTONE with iron-stained joints (1.20m)
		5.80m bgl Hard medium brown iron-stained fine to medium grained well bedded SANDSTONE with vertical and inclined iron-stained joints (2.00m)
		7.80m bgl Hard medium brown iron-stained medium grained well bedded SANDSTONE with vertical fracturing (1.00m)
		8.80m bgl Very hard dark brown heavily iron-stained fine grained fractured SANDSTONE (0.10m)
		8.90m bgl Hard light brown iron-stained fine grained well bedded SANDSTONE (2.75m)
		11.65m bgl Hard medium brown iron-stained fine to medium grained well bedded fractured SANDSTONE with vertical and horizontal iron-stained joints (2.15m)
		13.80m bgl Hard medium brown-grey iron-stained medium grained well bedded fractured SANDSTONE (0.70m)
		14.50m bgl Hard medium grey medium grained fractured SANDSTONE (1.00m)
		15.50m bgl Hard dark grey silty medium bedded fractured MUDSTONE with traces of plant fossils (1.00m)
		16.50m bgl Hard light grey SILTSTONE (0.30m)
		16.80m bgl Hard medium grey MUDSTONE (0.20m)
		17.00m bgl Hard light grey thickly bedded SILTSTONE with iron-stained bedding planes (2.20m)
		19.20m bgl Hard medium grey silty fractured MUDSTONE (0.40m)
		19.60m bgl Hard medium grey medium bedded SILTSTONE with iron-stained vertical fractures (0.40m)
		20.00m bgl borehole termination

4.1.1 Mining

The Coal Authority's online interactive mapping (Ref. 4) confirm the site is in a coal mining reporting area, however it is not within a development high risk area. The closest recorded mine entries are approximately 175m northwest of the site, related to Barnsley Colliery. The nearest coal outcrop is noted to be approximately 80m southeast, dipping to the east.

The Envirocheck Report (Ref. 1) confirms BGS recorded mineral sites located 328m north west (Barnsley Colliery) and 496m north (Honey Well Colliery) as the closest deep underground coal mines within 500m of the site boundary. Both have ceased operations.

Considering no historic coal mining features (mine entries, outcrops) are located within 100m of the site, and that the nearest outcrop to the southeast is dipping eastwards, it is unlikely that the development will be impacted by relic coal mining hazards. As such, a Low risk is identified to the proposed development and no further action is required.

4.1.2 Ground Gas

The nearest historical landfill site is located 195m north of the site off Old Mill Lane, with inert and commercial waste deposited from 1984 to 1989.

No active licenced waste management facilities are located within 1km.

One area of infilled land (water) is located within 250m, located 132m northeast and recorded in 1855 mapping.

The Envirocheck report (Ref. 1) confirms the site is situated in a lower probability radon area where <1% of homes are above the radon action level. On this basis radon protection measures are not considered necessary in the construction of new dwellings or extensions.

Where the new development incorporates a basement the advice of a specialist Radon assessor must be obtained.

4.1.3 Other Ground Stability Issues

The Envirocheck report (Ref. 1) confirms that there is no hazard to low hazard potential from the following ground stability hazards on and around the site; running sands, collapsible and compressible ground, shrinking or swelling clay, landslides and ground dissolution.

4.2 Hydrology

The nearest surface water feature is a small pond at Barnsley College Construction Centre, recorded 249m north of the site.

There have been no pollution incidents to controlled waters and there are no discharge consents granted within 500m and 300m of the site respectively.

The nearest surface water abstraction point is 625m east where surface water is used for cooling.

5.0 Unexploded Ordnance (UXO) Risk Assessment

Military activities including those conducted as part of both the First and Second World Wars have resulted in a legacy of unexploded ordnance (UXO) being present within the shallow soils of the UK.

UXO result from various sources including both allied (military training) and German (bombing raids) with a guide figure of approximately 10% of all munitions failing to function as designed.

The likelihood of UXO being encountered on a development site is influenced by a number of factors including; the proximity to strategic targets, the nature of the development works being undertaken and evidence of local damage in the post-war periods amongst others. In order to determine the likelihood of UXO being present on a site, a step-wise risk assessment process is followed. This process is outlined within CIRIA C681 Unexploded Ordnance: A Guide for the Construction Industry (Ref. 5).

Risk Mapping for UXO's (Ref. 6) has placed the site in a Low Risk area. Low risk areas are those that show a bomb density of 15 or less bombs per 1000 acres.

A review of historical maps from the Envirocheck report (Ref.1), indicates there is no evidence of bomb damage on site and no significant bombing targets noted within 250m of the site boundary.

Considering the above and that the site was occupied throughout the war period and redeveloped after the war, the risk of encountering potential UXO as part of future intrusive works is considered **Low**. As such no Detailed UXO Risk Assessment report is required.

If unexploded ordnance is discovered during any works, stop immediately, prevent access to the area, and inform the police. If the site boundary or location changes then the UXO risk should be reassessed.

6.0 Conceptual Site Model & Qualitative Risk Assessment

The conceptual site model (CSM) and Qualitative Risk Assessment (QRA) are presented in the table presented in this section. A diagrammatic CSM is contained within *Appendix A*.

The CSM details the source-pathway-receptor linkages or potential pollutant linkages (PPL) that have been identified for the site. The QRA details the associated level of risk relating to these potential pollutant linkages.

The CSM and QRA concern risk to human health and water environment with additional, more specific risk assessment protocols contained within the main body of this reporting, as detailed in *Section 6.1* below.

The QRA follows the framework outlined within CIRIA C552 (Ref. 7) which is summarised within *Appendix C*.

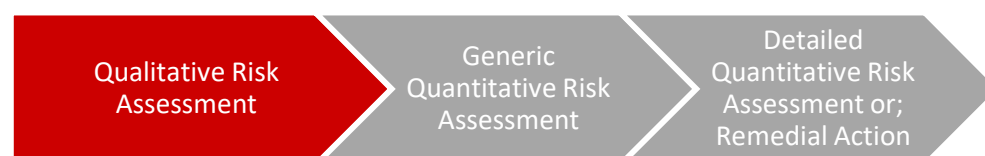

The 'risk rating' within the QRA refers to the risk that the source, pathway, receptor linkage or PPL is complete. Unless specifically stated it does not necessarily refer to an immediate risk and is intended to be used as a tool to assess the necessity for further assessment/investigation.

6.1 Additional Risk Assessments

The following risk assessments, listed below, are not included within the main CSM and QRA but none-the-less can be of critical importance to the onward development of the site.

- The risk posed by Mining is discussed and assessed in *Section 4.1.1*.
- The risk posed by Radon is discussed and assessed in *Section 4.1.2*.
- The risk posed by Unexploded Ordnance is discussed and assessed in *Section 5.0*.

Under current health and safety legislation, employers are required to carry out their own appropriate risk assessments and mitigation to protect themselves and their employees, other human receptors and the environment from potential contamination. Such risks must be adequately mitigated by law, specifically the Construction Design Management (CDM) Regulations (2015) (Ref. 8) which require that potential risks to human health and the environment from construction activities are appropriately identified and all necessary steps taken to eliminate / manage that risk. It has been assumed that any future construction works onsite will be undertaken in compliance with these requirements.

- The table below represents the first stage in the land quality risk assessment process: The Qualitative Risk Assessment.
- In order for a development site to be deemed 'suitable for use', the level of risk needs to be brought down to acceptable levels, i.e. low to negligible risk. The purpose of each stage of risk assessment is ultimately to establish, if there is a requirement for additional levels of assessment to be made in order to have sufficient confidence to support a risk characterisation or management decision, e.g. remedial action.
- In the absence of specific site data a Generic Quantitative Risk Assessment is invariably recommended.

Conceptual Site Model			Qualitative Risk Assessment			Recommended Actions
Source	Pathway(s)	Receptor(s)	Consequence	Likelihood of Occurrence	Risk Rating	
Significant on-site sources of contamination: <ul style="list-style-type: none"> • Deposition of made ground of unknown composition associated with the construction and demolition of former on-site structures including gas meter works, timber yard and former college buildings • Deposition of made ground of unknown composition associated with the railway sidings on the eastern boundary of the site. • Spillages/leakages of fuel oils from cars parked within the under-croft car parking currently on site. Significant off-site sources of contamination: <ul style="list-style-type: none"> • Uncontrolled deposition of made ground associated with the construction and decommissioning of the former railway sidings and tanks to the east. 	Direct contact, ingestion, inhalation (dust and vapours)	Site end users (College Students and Staff)	Medium Chronic health risk	Low Likelihood Given the historical site uses including gas meter works and timber yard, railway sidings on the eastern boundary and phases of construction and demolition, it is considered likely that contamination is present within site soils, that could pose a risk to end users. However, the proposed development will result in the building footprint breaking the source-pathway-receptor linkage between any Made Ground soils and the site end user, therefore lowering the risk.	Moderate / Low	Ground Investigation Including soil sampling GQRA as part of Ground Investigation
		Construction Works	Medium Chronic health risk	Low Likelihood Accounting for suitable PPE provided for all groundwork activities for construction workers.	Moderate / Low	
	Vertical migration through the superficial soils May occur due to existing service corridors and physical processes including; capillary action and downwards into the natural deposits through infiltration.	Controlled Waters (Groundwater) Bedrock deposits host Secondary A Aquifer.	Medium Pollution of sensitive water resources	Unlikely Possible sources of contamination from historical site activities However, the site is not within a Source Protection Zone and there are no potable groundwater abstractions within 750m of the site.	Low	No further works
	Horizontal migration over and through the superficial deposits (soils)	Controlled Waters (Surface water) The nearest surface water feature is a pond located 249m north of the site.	Mild Pollution of non-sensitive water resources	Unlikely Migration of contaminants to the nearest surface water feature is considered unlikely given the distance between the site and the nearest surface water receptor.	Very Low	No further works
Significant sources of ground gas: <ul style="list-style-type: none"> • Ground gas generation associated with made ground soils across the site. • Potential volatile contamination associated with fuel oil spillages and leakages in car park. • Historical landfill located 195m north 	Vertical and horizontal migration through existing service corridors and the underlying Made Ground and weathered bedrock deposits	Site end users (College Students and Staff)	Medium Human health risk	Low Taking into consideration the anticipated shallow depth of bedrock and distance to nearest historical landfill, there is low likelihood that ground gas generation will affect the site. While the site is located in a coal mining area, there are no indications of shallow workings and/or entries within the vicinity of the site that could increase gassing potential risk. No records of peat superficial deposits, or infilled land (water or non-water) on or within 100m of the site	Moderate / Low	Proposed Ground Investigation observations of Made Ground materials to determine requirements for gas monitoring programme.

7.0 Conclusion and Recommendations

The qualitative risk assessment (QRA) determined a varied level of risk associated with the proposed development from Low to Moderate.

The QRA concluded by recommending that generic quantitative risk assessments (GQRA) were conducted in order to confirm the assessment of risk ascribed to each of the respective potential pollutant linkages (PPLs). It is recommended that the GQRA is conducted as part of a ground investigation in support of the engineering design of the proposed development an outline scope for which is detailed in the section hereafter.

In summary, the following recommendations are made:

- Undertake an intrusive ground investigation;
- Undertake a GQRA as part of the ground investigation; and
- Undertake Ground Gas Monitoring if observations from encountered ground conditions determine requirement.

It is further recommended that this work is completed in advance of any development works taking place and could be undertaken in conjunction with a geotechnical investigation.

7.1 Contaminants of Concern

Potential contaminants of concern associated with the sources identified within the Conceptual Site Model in *Section 7.0* of this report include but are not limited to: broad range aliphatic and aromatic hydrocarbons present within any fuel oils; polycyclic aromatic hydrocarbons (PAHs); inorganic compounds including heavy metals; and asbestos present in discarded building materials.

Potential contaminants associated with the air-born dust/particulates include but are not limited to: polycyclic aromatic hydrocarbons and inorganic compounds including toxic metals that are also accounted for by potential onsite contaminants of concern.

While an electrical sub-station is located in the south-eastern corner of the site, its recent construction indicates that Poly-chlorinated Biphenols (PCBs) are unlikely to be encountered in shallow site soils / groundwater.

7.2 Other Considerations

The requirement for additional surveys, e.g. arboricultural and ecological surveys, should be confirmed through advice from a suitably qualified and experienced professional.

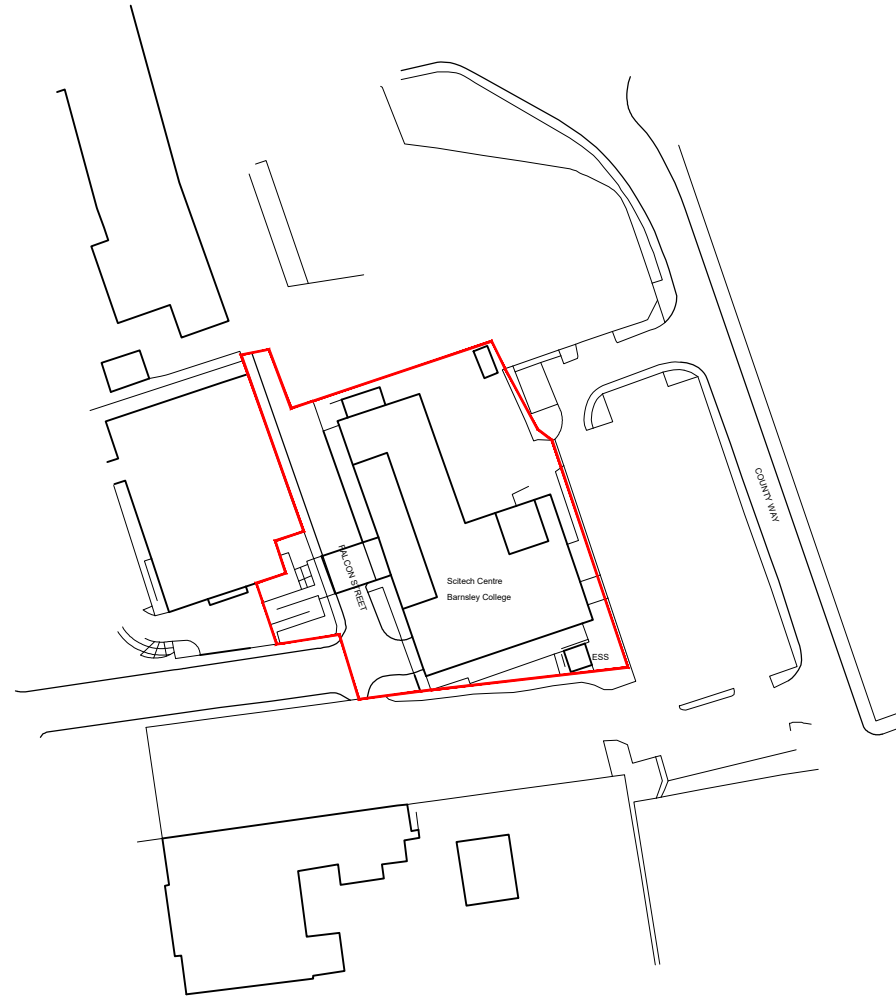

Relic foundations associated with historic buildings and other structures may remain beneath the site.

Introduction

The Environment Act 1995 has made site sensitivity a key issue, as the legislation pays as much attention to the pathways by which contamination could spread, and to the vulnerable targets of contamination, as it does the potential sources of contamination. For this reason, Landmark's Site Sensitivity maps and Datasheet(s) place great emphasis on statutory data provided by the Environment Agency/Natural Resources Wales and the Scottish Environment Protection Agency; it also incorporates data from Natural England (and the Scottish and Welsh equivalents) and Local Authorities; and highlights hydrogeological features required by environmental and geotechnical consultants. It does not include any information concerning past uses of land. The datasheet is produced by querying the Landmark database to a distance defined by the client from a site boundary provided by the client. In this datasheet the National Grid References (NGRs) are rounded to the nearest 10m in accordance with Landmark's agreements with a number of Data Suppliers.

Geology 1:50,000 Maps

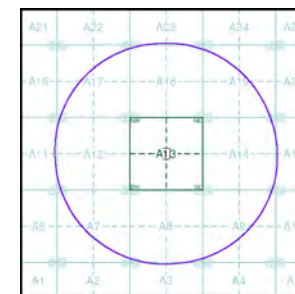

This report contains geological map extracts taken from the BGS Digital Geological map of Great Britain at 1:50,000 scale and is designed for users carrying out preliminary site assessments who require geological maps for the area around the site. This mapping may be more up to date than previously published paper maps.

The various geological layers - artificial and landslip deposits, superficial geology and solid (bedrock) geology are displayed in separate maps, but superimposed on the final 'Combined Surface Geology' map. All map legends feature on this page. Not all layers have complete nationwide coverage, so availability of data for relevant map sheets is indicated below.

Artificial Ground and Landslip

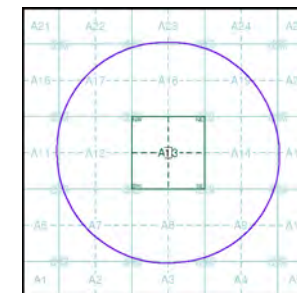

Artificial ground is a term used by BGS for those areas where the ground surface has been significantly modified by human activity. Information about previously developed ground is especially important, as it is often associated with potentially contaminated material, unpredictable engineering conditions and unstable ground.

Artificial ground includes:

- Made ground - man-made deposits such as embankments and spoil heaps on the natural ground surface.
- Worked ground - areas where the ground has been cut away such as quarries and road cuttings.
- Infilled ground - areas where the ground has been cut away then wholly or partially backfilled.
- Landscaped ground - areas where the surface has been reshaped.
- Disturbed ground - areas of ill-defined shallow or near surface mineral workings where it is impracticable to map made and worked ground separately.

Mass movement (landslip) deposits on BGS geological maps are primarily superficial deposits that have moved down slope under gravity to form landslips. These affect bedrock, other superficial deposits and artificial ground. The dataset also includes foundered strata, where the ground has collapsed due to subsidence.

Superficial Geology

Superficial Deposits are the youngest geological deposits formed during the most recent period of geological time, the Quaternary, which extends back about 1.8 million years from the present.

They rest on older deposits or rocks referred to as Bedrock. This dataset contains Superficial deposits that are of natural origin and 'in place'. Other superficial strata may be held in the Mass Movement dataset where they have been moved, or in the Artificial Ground dataset where they are of man-made origin.

Most of these Superficial deposits are unconsolidated sediments such as gravel, sand, silt and clay, and onshore they form relatively thin, often discontinuous patches or larger spreads.

Bedrock and Faults

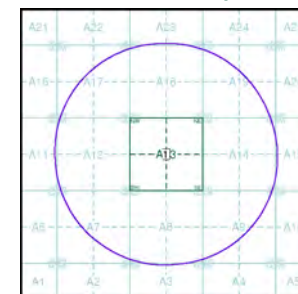

Bedrock geology is a term used for the main mass of rocks forming the Earth and are present everywhere, whether exposed at the surface in outcrops or concealed beneath superficial deposits or water.

The bedrock has formed over vast lengths of geological time ranging from ancient and highly altered rocks of the Proterozoic, some 2500 million years ago, or older, up to the relatively young Pliocene, 1.8 million years ago.

The bedrock geology includes many lithologies, often classified into three types based on origin: igneous, metamorphic and sedimentary.

The BGS Faults and Rock Segments dataset includes geological faults (e.g. normal, thrust), and thin beds mapped as lines (e.g. coal seam, gypsum bed). Some of these are linked to other particular 1:50,000 Geology datasets, for example, coal seams are part of the bedrock sequence, most faults and mineral veins primarily affect the bedrock but cut across the strata and post date its deposition.

Combined Surface Geology

The Combined Surface Geology map combines all the previous maps into one combined geological overview of your site.

Please consult the legends to the previous maps to interpret the Combined "Surface Geology" map.

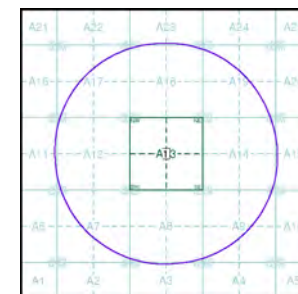

Additional Information

More information on 1:50,000 Geological mapping and explanations of rock classifications can be found on the BGS website. Using the LEX Codes in this report, further descriptions of rock types can be obtained by interrogating the 'BGS Lexicon of Named Rock Units'. This database can be accessed by following the 'Information and Data' link on the BGS website.
