

Landscaping Details

We won't need to alter the landscaping much at all, as the wooden buildings are being set on wooden bases. The only piece of alteration will be the 4m x 4m concrete base for the cremator machine.

Any work to the hedges is carried out by the site owner and this is for the health and wellbeing of the hedges and trees that are already established. We will add more flowers that are bee friendly as both my wife and me are concerned with the bee population decline and are willing to do our bit to help. We will also be installing bird feeders to encourage different types of bird onto the site.

Anything we do in this new venture will be sympathetic to the surrounding area and also to improve things if we can, regarding the flora and fauna of the area and the environment as a whole.
