EXTERNAL BLINDS AND AWNINGS

Hunter Douglas; Luxaflex® Projects Div

Luxaflex®

Awnings and canopies not only enhance the appearance of a building, but are the most efficient method of solar control. The company is the sole distributor in the UK for Luxaflex® awning systems and UK distributor for Dickson Constant fabrics, one of the largest manufacturers of acrylic canvas in the world.

Awning systems: the company provides a range of systems suitable for both commercial and domestic applications, from simple sunshades to awnings capable of projecting 4m. Automatic wind speed and solar-cell control are optional. The systems are all made from powder-coated aluminium and conform to exacting TÜV German testing standards.

Composition and manufacture

The arms of systems have a unique, patented design tested to 80,000 operations.

Canopies and walkways are available in a standard range of shapes but the company specialises in custom-made effects. Frames are manufactured from aluminium with a wide variety of covering fabrics available.

Size and weight

Custom made to order.

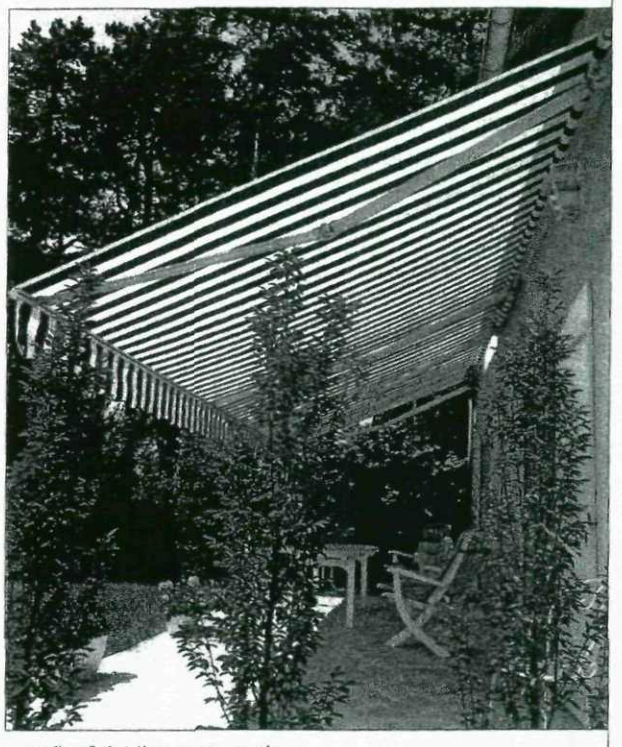

Appearance

Dickson Constant acrylic canvas is available in over 140 patterns and colourways and is guaranteed shrink-proof, colourfast and rot-proof. The fabric is available to Class 1 flame retardant. PVC fabrics are also available.

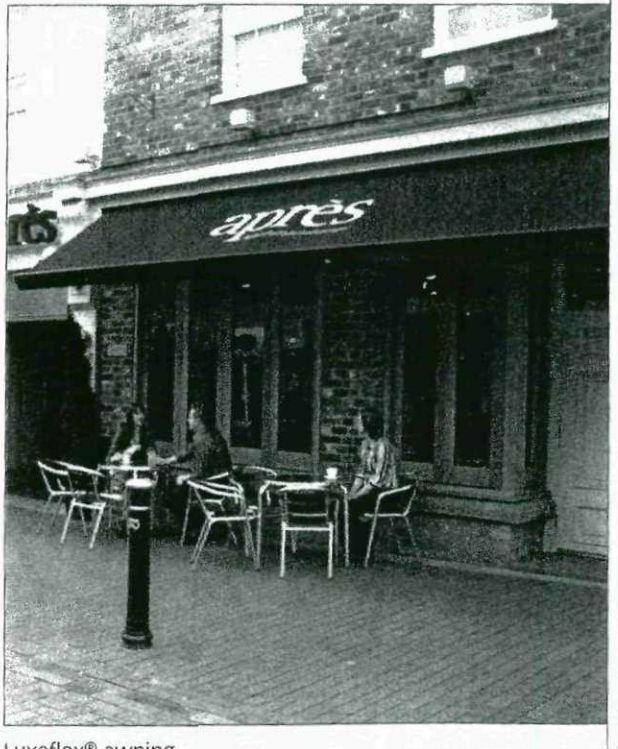

An in-house artwork department can screenprint or signwrite logos and graphics.

Sitework

The company offers a nationwide survey and installation service.

FENCING AND RAILINGS

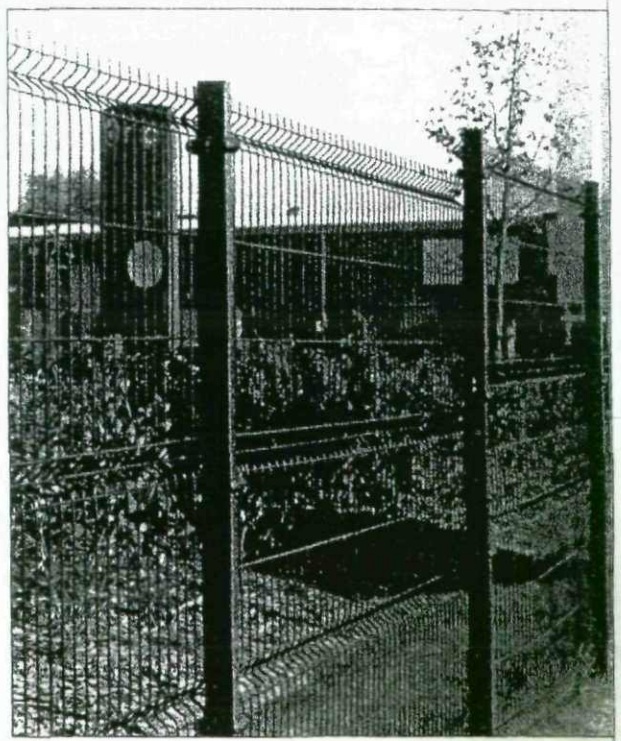

H S Jackson & Son (Fencing)

EuroGuard®

The EuroGuard® range consists of three styles of wire panels and posts, and can be adapted to suit most end users' individual needs.

All EuroGuard® panels are clamped to posts, and secured with tamper-proof fixings. Posts are inserted 700 to 800mm in the ground, depending on the fence height, and set in concrete. For uneven sites, the panels can be stepped.

The tubular chain-link fencing system is ideal for commercial and industrial use, tennis courts, corporate buildings and general purpose use. The system features an extra-security top rail, and can be supplied with cast-aluminium brackets, either vertical, single or double angled, to support rows of barbed wire. In addition, the fence can be clad with welded mesh to provide greater security, or with sports netting.
