

Barnsley Temporary Markets

Waste Management Strategy

The scheme makes provision for a dedicated waste storage area within the secure part of the site. Space is provided for 3 no. compactor skips, allowing for the management of all types of waste.

It is conveniently located adjacent to the service entrance and drop off area.

The waste will be collected in line with existing arrangements, by a private waste collection company. This is in line with the Council's waste and environmental policies.

The waste storage area will be accessed via the existing servicing road from Kendray Street.

Given the proposal is for a temporary replacement market facility, there will be no net increase in the creation of waste.

The demolition of the existing building is being dealt with under a separate prior notification application, in line with the wider redevelopment proposals.

The design seeks to minimise waste during the construction process and also avoid significant works which would need to be removed / disposed of after the temporary three year period.

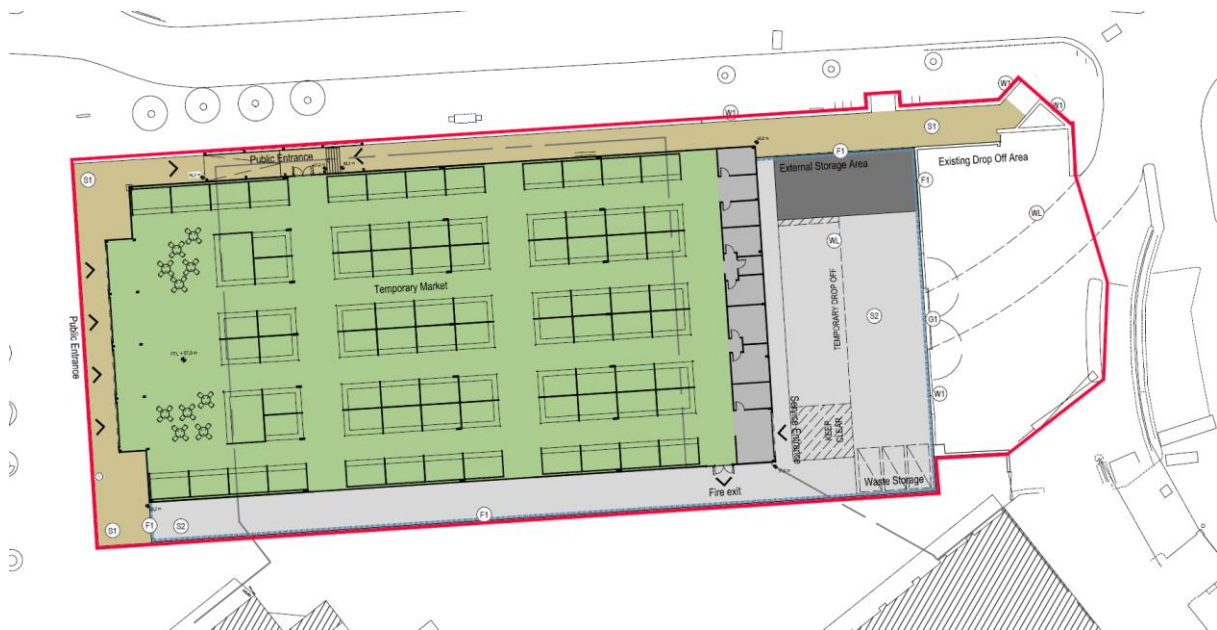

Figure 1: Shows the location of the waste storage area, behind a secure servicing area. It also shows the existing servicing / drop off access which will be retained as part of the temporary market.
