

Design and Access Statement for Soar & Sons Ltd, Tank Row, Stairfoot, Barnsley

Background

Soar and Sons are the leading company for dismantling and recycling of electrical transformers to the major power suppliers and subsidiary companies.

Recently the company has expanded onto one site creating new offices and workshops.

Proposal

The existing workshop has already been extended (to create additional garaging workshop) to match the original workshop. The proposed garage/training room is additional garaging for vehicles with a training room above for staff (currently training is in a portakabin). The design is in keeping with the workshop.

Access

Access to and from the site will not be affected.
