Design

The design of the building work we propose to carry out is to erect mesh fencing - green Torus 1.2 - 1.8 m high on top of the existing perimeter stone wall. Advice from Barnsley Planning department was taken when choosing the design of the fencing. The design chosen is the most common type of fencing to used in our area, for example Doctors Surgery and Children's Centres.

The main reason for the erection of the Torus fencing is due to the level of crime we receive. The building operates as a Private Day Care setting for children aged from birth up to 5 years. Since opening in 2003 we have regularly been hit by crime, most of which as cost the business a substantial amount of money – for repair work etc.

The setting works closely with the Local Education Authority, and comments on the current outdoor area have been quite negative due to the lack of equipment we have. This is primarily due to the fact that we cannot leave equipment out over night, and at weekends because of the high possibility of it becoming damaged or stolen. The fence will hopefully act as a deterrent to the criminals.
