STATEMENT IN SUPPORT OF PLANNING APPLICATION

Site	33 Barnsley Road, Penistone, Sheffield S36 8AE
Applicant	Mrs. K. Wood UK Hygiene
Proposal	Change of use to a mixed use Washroom Hygiene and Sanitary Waste Transfer

---

The contract cleaning business was discontinued in 2006 after the grant of permission on appeal for the use of a building for the storage of cleaning consumable associated with service contracts (January 1998 ref B/97/0544/PU) and washroom hygiene services was concentrated and became the main stay of this organisation.

To recap briefly, that the business involves the storage on site of hygiene products and ancilliary equipment, non mechanical, which are transported for use on clients premises elsewhere. We transport and collect on our own vehicles, involving vehicles Being on site, one per day, to move waste and the others once per week.

Waste Transfer Station
After moving totally into washroom hygiene services, part of this service involves the provision of sanitary disposal systems to the customers base. Movement of waste from the storage area, is on a daily basis, moved by our own vehicle.

Hours of Operation

The waste transfer station operates from 8.00am to 17.00 hours Mondays to Fridays. Bank Holidays not included.

Waste Types and Origin

Only two types of waste are collected and then disposed of viz:-

Group B waste consisting of discarded syringe needles and disposable sharp instruments, which are contained within a sealed sharps box, and stored separately from the sanitary waste.

Group E waste consisting of items used to dispose of urine, faeces and other bodily secretions, also including incontinence pads, and sanitary disposal pads etc. Again storage is totally separate and sealed off.

Waste Storage and Throughput

The predominant waste passing through the transfer station is Group E, largely consisting of femaile sanitary ware, incontinence and nappy waste. These items come from such places as Ladies Toilets, Schools, Old Peoples Registered Homes, and Mother and Baby Rooms.

Treated Sanitary waste Group E, is contained in a separate storage facility within the store-place which is also used in connection with washroom hygiene supplies.

Waste is removed from the site for disposal on a daily basis, ensuring that the available storeage capacity is not exceeded. Also the sharps which are also housed separately within the store-place are taken away for incineration on a weekly basis.

Drainage
The drainage from the activities within the transfer station is to foul sewer and is the subject of a trade effluent discharge consent.

Vehicles
The vehicles used in connection with this business are solely used for the purposes of washroom hygiene and sanitary disposal systems.
Refuelling of vehicles is off-site, no fuel is stored on site and the site operates on a one way system, with entry being taken from Wellhouse Lane and exit onto Barnsley Road.

We have five vehicle parking spaces allocated to us, located opposite the office.

Licence.

The waste management licence was awarded by E.A. and the number is EAWML/65253.P1 dated January 2003
Also I was awarded COTC, via WAMITAB, after qualifying with NVQ Level 4 Waste Management. Dated 14th April 2004

General
This business operation does not give rise to nuisances, of noise, dust, litter or vibrations and there are no detectable odours.
Apart from the office accommodation, the operations are conducted within the confines of the storage building where a high standard of cleanliness is always maintained.
