Proposed tree pruning to mature Sycamore tree, 16 Templing Close, Barnsley, S70 4NZ

February 2020

Proposal

It is proposed that minor crown reduction works are undertaken in order to prevent damage to both 16 and 18 Templing Close, who are situated under the tree crown.

The residential development was completed in 2011, prior to which tree works were udertaken, with a number of surrounding trees were removed as part of the Planning Consent (Persimmon Homes).

No works to the tree have been undertaken since that time, and annual growth now results in branches hitting the the roof structures of both 16 and 18 Templing Close during stormy conditions.

To avoid potental future damage, minor pruning / crown reduction is proposed to be underaken by a suitably qualified person.

Quantity

The amount of work required is considered minimal, with maximum 1.5m pruned from selected branches that overhang and risk contact with properties. The photograph above indicates a typical branch requiring pruning, limiting work to branches with max 35mm diameter.

Implications:

- No detrimental effects are anticipated on the health of the tree
- Likely damage to residential properties if works are not carried out
