APPENDIX B: Target Notes Report

DRAWINGS

Drawing G7484.001 - Phase 1 Habitat Survey

Drawing - Bond Bryan Architects Option H Site Plan - (Ref SYFRS/PO1)

Executive Summary

1. TEP was commissioned in February 2019 by South Yorkshire Fire and Rescue to provide an ecological assessment of the Barnsley Fire Station site in South Yorkshire, hereafter referred to as 'the site'.
2. The ecological assessment is required to support redevelopment of the site. Proposals for the site are yet to be finalised however, demolition of two existing buildings and redevelopment of the other buildings within the site is proposed in order to provide updated fire station facilities.
3. The site is located to the south-west of the urban area of Barnsley and is 0.81ha in area. The A6133 (Broadway) is directly adjacent to the site along the south-west boundary, with residential housing adjacent to the south-eastern site boundary.
4. The site consists predominantly of hardstanding and buildings, with associated landscaping features including amenity grassland, introduced shrub and scattered broad-leaved trees.

Habitats

5. Tree removal should be avoided. Where trees require removal replacement planting should be incorporated into the development design to compensate for any loss.

Invasive Non-native Species

6. It is recommended that the cotoneaster species along the north-western site boundary be removed to avoid spreading of this potential invasive species within the site and to other habitats within the wider landscape.

Bats

7. Buildings 3 and 4 were categorised as having low potential bat roost habitat suitability and will require a single nocturnal roost survey during the bat active season (May to August inclusive) to confirm presence/absence of roosting bats within the site prior to any demolition works.

Birds

8. Vegetation clearance should be undertaken outside the bird nesting season (March to August inclusive). If this is not possible, a suitably qualified ecologist should carry out a nesting bird check, a maximum of 24 hours in advance of clearance. If nests are recorded, works would need to be delayed within influencing distance of the nest until chicks have fledged.

Biodiversity Enhancement

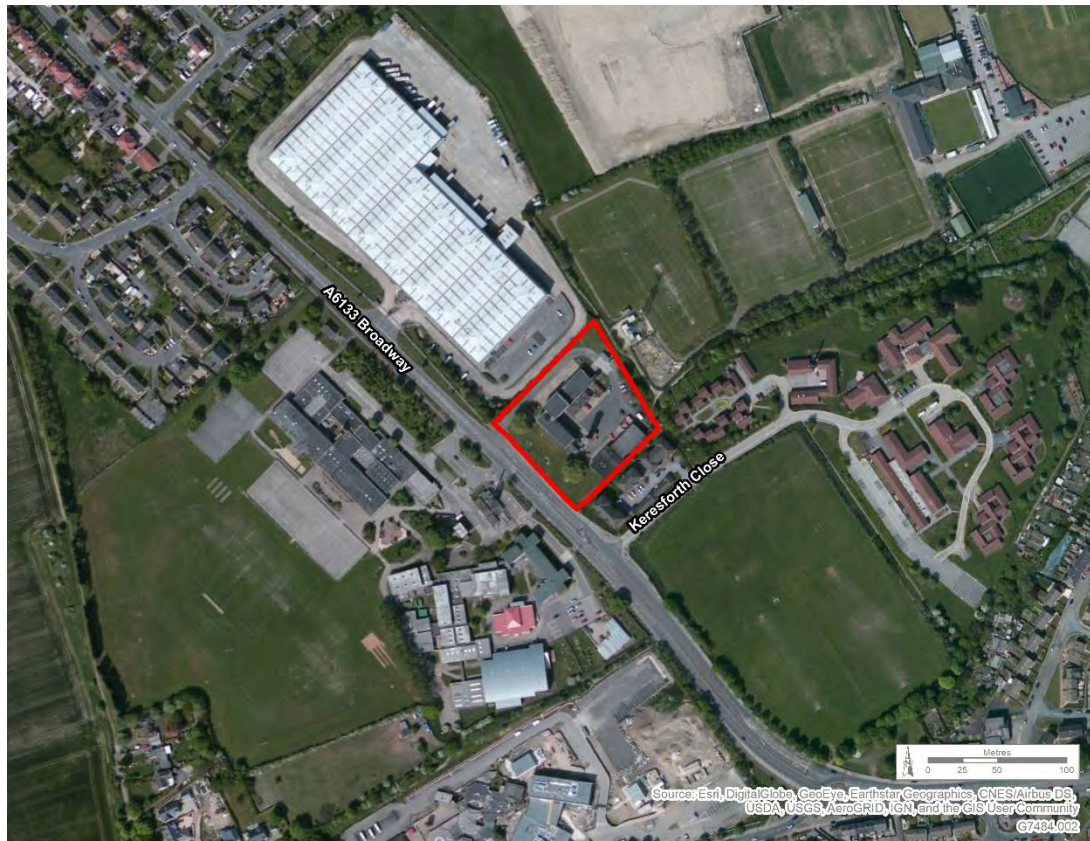

9. It is recommended that the landscape planting, as part of any future development, provides sufficient replacement refuge, commuting and foraging habitat for wildlife to compensate for any habitat loss. Landscape planting should include some berry and nectar bearing species to enhance foraging opportunities for birds and invertebrates within the area. Further enhancements should be achieved by installing bird and bat boxes on site to provide nesting and roosting opportunities.

1.0 Introduction

- 1.1 TEP was commissioned in February 2019 by South Yorkshire Fire and Rescue to provide an ecological assessment of the Barnsley Fire Station site in South Yorkshire, hereafter referred to as 'the site'.
- 1.2 The ecological assessment is required to support development of the site. Proposals for the site are yet to be finalised however, demolition of two existing buildings and redevelopment of the other buildings within the site is proposed in order to provide updated fire station facilities, as shown in the Bond Bryan Architects Drawing: Option H Site Plan - (Ref SYFRS/PO1).
- 1.3 Ecological surveys undertaken to inform the future planning application in association with development of the site included:
 - A desk based assessment;
 - A walkover habitat survey;
 - Preliminary ground-level roost assessments of trees; and
 - A preliminary ground-level roost assessments of structures within the site including internal and external inspection with regard to bat roost habitat suitability.
- 1.4 This report has the following objectives:
 - to describe the existing vegetation and give an overview of the habitats present on site;
 - to identify whether there are any features of conservation value such as legally protected species or habitats of biodiversity importance;
 - to identify any potential ecological constraints to the proposed development;
 - to provide recommendations for further surveys or mitigation requirements; and
 - to outline opportunities to provide biodiversity enhancement within site proposals.

2.0 Site Description

- 2.1 The site consists predominantly of hardstanding and buildings, with associated landscaping features including amenity grassland, introduced shrub and scattered broad-leaved trees.
- 2.2 The site is located to the south-west of the urban area of Barnsley and is 0.81ha in area. The A6133 (Broadway) is directly adjacent to the site along the south-west boundary, with residential housing adjacent to the south-eastern site boundary. Allotments, a radio pylon and residential development are present along the north-eastern site boundary. Industrial warehousing immediately bounds the site to the north-west. The central grid reference for the site is SE 33214 05617.
- 2.3 Residential development is dominant within the wider landscape, though arable farmland is present to the south and west of the site, with hedgerows, trees and small blocks of broad-leaved woodland associated with field boundaries also present. Figure 1 below illustrates the site within the context of the wider landscape.

KEY

- Site boundary

Figure 1. Site boundary outlined in red within the context of the wider landscape.

3.0 Methods

Desk Based Assessment

- 3.1 Sources used for collating information regarding historic species records and protected sites are listed in Table 1 below. Sites with international designation were searched for within 10km of the site, nationally designated sites within 2km of the site and local designations within 1km. A map showing the locations and names of sites is included within the desk based assessment report at Appendix A.
- 3.2 Records give a useful indication of the distribution of ecological receptors in the locality, although absence of records cannot be taken to represent actual absence in the field. Relevant planning policies were also collated.

Table 1. Ecological sources of information.

Source of Information	Nature of Information
Barnsley Biological Records Centre (BBRC) - Sheffield City Council Ecology Unit	Protected and/or notable species records and wildlife sites
Multi-Agency Geographic Information for the Countryside (MAGIC) Map	Statutory protected sites and habitat inventory
Barnsley Metropolitan Borough Council Local Plan (adopted 3rd January 2019)	Local planning policies
Google Maps and Google Earth (including the use of Street View) Map data ©2019 Google	Satellite imagery of local landscape
Natural England Local Nature Reserve website (www.lnr.naturalengland.org.uk).	Local Nature Reserve habitats and reasons for designation.

Walkover Habitat Survey

- 3.3 A walkover habitat survey of the site was undertaken by ecologist Lindsey Roberts (FISC Level 4) on 6th March 2019. The survey was carried out in accordance with the Phase 1 habitat assessment methods¹ and Guidelines for Preliminary Ecological Appraisal².
- 3.4 The Phase 1 habitat survey was undertaken outside the recommended survey season of mid-April to mid-October and is therefore referred to as a walkover habitat survey. However, undertaking the walkover habitat survey outside of the appropriate survey season is not considered a limitation as the habitats on site are of low ecological value and unlikely to support protected plant species.

¹ JNCC (2010). Handbook for Phase 1 Habitat Survey: A technique for environmental audit.

² CIEEM (2013). Guidelines for Preliminary Ecological Appraisal.

- 3.5 The walkover survey provides an overview of key habitats and identifies features of ecological value, as well as the presence, or potential presence, of protected or notable species. The weather during the survey was overcast and dry.

Preliminary Ground-Level Roost Assessment of Trees

- 3.6 A preliminary ground-level roost assessment of the trees within the site was undertaken during the walkover habitat survey to determine their suitability for providing roosting habitat for bats. The assessment was undertaken during suitable weather conditions.
- 3.7 Close focusing binoculars were used, where appropriate, to search for any field signs of bats or features with bat roosting potential. Most tree roosts are created by one or a combination of the following features:
- Old woodpecker holes;
 - Splits in trunk, bough or large branches;
 - Rot holes in trunk, bough or large branches;
 - Holes formed by two boughs or branches growing in contact;
 - Loose or lifting bark; and
 - Underneath a covering of dense latticed creeper, usually ivy *Hedera helix*.
- 3.8 Preliminary ground-level roost assessment of trees can be carried out at any time of the year but for deciduous trees the optimum time is in winter (after the leaves have fallen and before new ones replace them) around December to March inclusive. All trees within the site could be adequately assessed with no visual barriers.
- 3.9 Trees were categorised with reference to the Bat Conservation Trust Good Practice Guidelines (Collins, 2016)³ (see Table 2 below). Habitats within the site were also categorised in accordance with the BCT 2016 Guidelines as to the suitability of the site to support foraging and commuting bats.

Preliminary Roost Assessment of Structures

- 3.10 The Preliminary Roost Assessment (PRA) of the buildings within the site was undertaken by licensed bat ecologist Lindsey Roberts (Natural England Survey Class Licence Level 2: 2018-35038-CLS-CLS) on 6th March 2019.
- 3.11 The assessment was undertaken during suitable weather conditions as poor light conditions can cause Potential Roost Features (PRFs) to be missed, wind can blow away external signs of bat activity such as droppings and rain can make staining around roost entrances difficult to distinguish.
- 3.12 Close focusing binoculars were used, where appropriate, to search for any field signs of bats or features with bat roosting potential. An endoscope was also used to inspect PRF. Examples of field evidence of roosting bats includes live or dead specimens, droppings, fur-oil staining, feeding remains and odour.
- 3.13 Examples of structural features often providing roost habitat suitability or internal access for bats include:

³ Ref 23-10: Collins, J. (ed.), (2016), Bat Surveys for Professional Ecologists: Good Practise Guidelines (3rd edn). The Bat Conservation Trust, London.

- Slipped roof tiles;
- Splits in soffit boxes;
- Gaps under fascia boards;
- Loose or lifting lead flashing; and
- Missing mortar and cavities in brickwork.

3.14 Additional factors assessed included the structure, age and condition of the buildings within the site and the surrounding landscape value. Structures were categorised with reference to the BCT 2016 Guidelines as detailed in Table 2 below. Further nocturnal roost survey requirements, depending on categorisation of potential roost habitat suitability are also specified in Table 2.

Table 2. Evaluation of potential roost habitat suitability of trees and buildings for bats and required levels of further survey.

Suitability	Roosting Habitats	Further Survey
Negligible	Negligible potential roost features are present that are likely to be used by bats.	No further survey required.
Low	A tree of sufficient size and age to contain PRFs but with none seen from the ground or features seen with only very limited roosting potential. A structure with one or more potential roost sites that could be used by individual bats opportunistically. However, these potential roost sites do not provide enough space, shelter, protection, appropriate conditions and/or suitable surrounding habitat to be used on a regular basis or by larger numbers of bats (i.e. unlikely to be suitable for maternity or hibernation high conservation status roosts).	No further surveys required for trees. One survey visit required for structures. Including one dusk emergence or dawn re-entry survey undertaken between May to August.
Moderate	A tree or structure with one or more potential roost features that could be used by bats due to their size, shelter, protection, conditions and surrounding habitat, but which are unlikely to support a roost of high conservation status (maternity or hibernation).	Two separate survey visits. Including one dusk emergence survey and a separate dawn re-entry survey undertaken between May to September with at least one survey undertaken between May to August.
High	A tree or structure possessing one or more potential roost features that are suitable for use by larger numbers of bats on a regular basis and potentially for longer periods of time, due to their size, shelter, protection, conditions and surrounding habitat.	Three separate survey visits. Including at least one dusk emergence survey and a separate dawn re-entry survey (the third visits being either a dusk emergence or dawn re-entry survey) undertaken between May to September with at least two surveys undertaken between May to August.

Limitations to Surveys

3.15 Buildings 3 and 4 were condemned and therefore internal access was not permitted due to health and safety concerns. However, restriction of internal access to Buildings 3 and 4 was not a significant constraint to the PRA as the buildings did not have roof voids and PRFs noted externally were not likely to provide internal access.

4.0 Results

- 4.1 A summary of the findings of the desk based assessment is described below. Full results, including maps of designated sites and priority habitats, are found in Appendix A.

Designated Sites

- 4.2 The desk based assessment revealed no international or national sites designated for nature conservation interest within 1km of the site boundary.
- 4.3 There are no internationally designated sites within 10km of the site.
- 4.4 There are no nationally designated sites within 2km. The closest nationally designated site is Worsborough Country Park Local Nature Reserve (LNR) located approximately 2.15km to the south-east of the site.
- 4.5 Sites of Special Scientific Interest (SSSI) within 4-10km of the site include:
- Sedcar Wood
 - Carlton Main Brickworks
 - Stairfoot Brickworks
 - Pye Flatts Meadows; and
 - Wharncliffe Craggs.

- 4.6 The closest SSSI to the site is Stairfoot Brickworks located 4.94km east, designated for its 'Earth Heritage'. None of these designated sites have direct connectivity to the site and the site does not fall within any SSSI Impact Risk Zones (IRZ).

- 4.7 There are no locally designated sites within 1km of the site.

Priority Habitats

- 4.8 Natural England's MAGIC database identifies no areas with habitats of principal importance as listed in accordance with Section 41 (S41) of the Natural Environment and Rural Communities Act 2006 (NERC Act 2006) within 500m of the site or the site itself.
- 4.9 There are several small areas of deciduous woodland, young woodland and wood pasture and parkland to the south of the site within 1km. None of these habitats have direct connectivity to the site.
- 4.10 For mobile species such as birds and bats, the site is within commuting distance from designated sites and priority habitats. However, the site lacks any potential to support significant bird populations and has no potential to support Schedule 1 species, due to the poor habitat diversity present.

Local Policy

- 4.11 The Barnsley Metropolitan Borough Council Local Plan (adopted 3rd January 2019) does not highlight any issues for the site regarding biodiversity. The site is already developed and is identified within the local plan as being for mixed use. Further details about local policies relevant to biodiversity and landscape are summarised in Appendix A.

Protected and Notable Species Records

- 4.12 There are several records of protected species within 1km of the site recorded within the last 10 years, including species protected under the legislation below. Full details are given at Appendix A.
- The Conservation of Habitats and Species Regulations 2017 (including European protected Species (EPS));
 - Protected bird species under Schedule 1 of the Wildlife and Countryside Act 1981, as amended (WCA1);
 - Protected animal species under Schedule 5 of the Wildlife and Countryside Act 1981, as amended (WCA5);
 - Protected plant species under Schedule 8 of the Wildlife and Countryside Act 1981, as amended (WCA8);
 - Invasive non-native species under Schedule 9 of the Wildlife and Countryside Act 1981, as amended (WCA9);
 - Species of principal importance under Section 41 of the Natural Environment and Rural Communities Act 2006 (S41);
 - Protection of Badgers Act 1992 (PBA);
 - Birds of Conservation Concern Red and Amber status lists (BRd and BAm);
 - Species that are Nationally Rare, Nationally Scarce or listed on national or local Red Data Lists; and
 - Habitats and other notable species listed under the Local Biodiversity Action Plan (LBAP).

Great Crested Newt and Other Amphibians

- 4.13 There were no records of great crested newts *Triturus cristatus* (GCN) a European Protected Species (EPS, WCA5, S41) within 500m of the site returned from the desk based assessment provided by BBRC (Appendix A). Ordnance Survey (OS) maps and satellite imagery indicate that there are no ponds located within 500m of the site. The generally accepted maximum range of amphibians from a specific waterbody that is not cut off by barriers preventing amphibian migration is 500m.
- 4.14 Two records of GCN were recorded within 1km of the site. One record is located 0.99km south-east associated with ponds within a farm and separated from the site by the A6133. A second record was located 1.29km north-west of the site, associated with scrub around an industrial unit and with connectivity to a golf course and woodland, though separated from the site by the A6133 and the M1.

Badger

- 4.15 No records of badger *Meles meles* (PBA) have been recorded within 1km of the site.

Bats

- 4.16 Noctule *Nyctalus noctula* (EPS, WCA5, S41), common pipistrelle *Pipistrellus pipistrellus* (EPS, WCA5), pipistrelle species *Pipistrellus* sp. (EPS, WCA5) and general bat species records have been recorded within 1km of the site. Other species are likely to be present within the wider landscape. There are no EPS mitigation licences for bats shown on Magic Maps within 1km of the site.

Birds

- 4.17 There are numerous bird records within 1km of the site including for Schedule 1 (WCA1) species such as barn owl *Tyto alba*, merlin *Falco columbarius*, redwing *Turdus iliacus* and fieldfare *Turdus pilaris*. Examples of other species recorded within 1km of the site include house sparrow *Passer domesticus* (S41, LBAP, BRd), tree sparrow *Passer montanus* (S41, LBAP, BRd), reed bunting *Emberiza schoeniclus* (S41, BAm) hawfinch *Coccothraustes coccothraustes* (S41, BRd) and lapwing *Vanellus vanellus* (S41, BRd).

Brown Hare

- 4.18 There is a single brown hare *Lepus europaeus* (S41) record located within 1km of the site.

Hedgehog

- 4.19 There are several records of hedgehog *Erinaceus europaeus* (S41) within 1km of the site.

Invertebrates

- 4.20 Numerous invertebrate records were identified during the desk based assessment though none of these related to a protected or notable species.

Reptiles

- 4.21 No reptile records were returned from the desktop search within 1km of the site.

Water Vole and Otter

- 4.22 The desk based assessment returned no historic records of otter *Lutra lutra* (EPS) within 1km of the site and there are no watercourses suitable to support otter within 1km of the site.
- 4.23 Three records of water vole *Arvicola amphibius* (S41) have been recorded within 1km of the site, associated with a brook west of the M1 and more than 0.85km from the site. No habitat suitable to support water vole is present within or adjacent to the site.

Protected and Notable Flora

- 4.24 The desk based assessment returned three records for native bluebell *Hyacinthoides non-scripta*, a plant species listed under Schedule 8 of the Wildlife and Countryside Act 1981, as amended (WCA8) within 1km of the site.

Invasive, Non-native Species

- 4.25 The desk based assessment returned records of several invasive non-native plant species listed under Schedule 9 of the Wildlife and Countryside Act 1981, as amended (WCA9) within 1km of the site. The species included cotoneaster *Cotoneaster* sp., Japanese rose *Rosa rugosa*, Japanese knotweed *Fallopia japonica*, montbretia *Crocsmia x crocosmiiflora* and rhododendron *Rhododendron ponticum*.

Walkover Habitat Survey

- 4.26 The walkover habitat survey is illustrated at Drawing G7484.001 and photographs of the habitats are provided along with the Target Notes Report at Appendix B.
- 4.27 The south-western site boundary is open on to the A6133, whereas the north-western and north-eastern boundaries are formed from green PVC coated chain link fencing and the south-eastern by a brick wall.
- 4.28 The majority of the site has low habitat diversity being dominated by hardstanding and buildings. The introduced shrub along the north-western boundary provides the habitat with the most opportunity for biodiversity. Connectivity to the wider landscape and more diverse habitats is poor with the majority of the site being fenced and also being bounded by a main road. A small strip of scrub external to the site along the north-eastern boundary provides some connectivity to the arable fields to the north. The site has connectivity to the surrounding landscape for transient species such as birds and bats.
- 4.29 The habitats present on site or adjacent to the site are described in detail below and include:
- Hardstanding;
 - Buildings;
 - Amenity grassland;
 - Introduced shrub;
 - Scattered scrub; and
 - Scattered broad-leaved trees.
- 4.30 Hardstanding areas include car parking and the entrance road within the site, in addition to concrete slab paving around the main office building in the south-west of the site.
- 4.31 Four main buildings are present including the main fire engine garage and reception, the main office building and two derelict buildings along the eastern site boundary, which were formally offices and additional garage areas (Target Note 3). Other structures within the site include a small metal container, the fire tower and two electricity substation supply sheds.
- 4.32 Amenity grassland is present around the buildings within the site, the largest area being present along the southern boundary with the A6133. The sward is short and well maintained, with dominant perennial ryegrass *Lolium perenne* (Target Note 1). The main area of amenity grassland in the south-west of the site provides an embankment which slopes north-eastwards towards the centre of the site. The topography of the centre of the site is generally flat.

Figure 2. Fire station buildings with surrounding amenity grassland and introduced shrub, taken facing north from the A6133.

- 4.33 Introduced shrub is present within the site in areas of amenity grassland where landscape planting has been included (Target Note 2). The largest area of introduced shrub is along the north-west boundary with adjacent warehouses, where the shrubs have been managed as tall (approximately 2m high) specimens to form a hedgerow. Smaller areas of introduced shrubs are well maintained.
- 4.34 A couple of young grey willow *Salix cinerea* trees are present along the north-eastern site boundary in addition to elder *Sambuccus nigra*, providing the occasional scattered scrub within the site (Target Note 4).
- 4.35 Two semi-mature weeping willows *Salix × sepulcralis* are present within the south of the site (Target Note 5). These have been planted as part of the landscape design.

Figure 3. Introduced shrub along the north-western site boundary managed as a hedgerow.

Protected and Notable Species

Great Crested Newt and Other Amphibians

- 4.36 There is no suitable aquatic breeding habitat for amphibians within the site or adjacent. The introduced shrubs along the north-western site boundary provides limited foraging habitat for amphibians.

Badger

- 4.37 No signs of badger were identified during the walkover habitat survey. The site is not suitable to support badger as the dominant habitats are hardstanding and buildings.

Bats

Preliminary Ground-Level Roost Assessment of Trees

- 4.38 None of the trees within the site had features which could provide suitable roost habitat for bats. The two weeping willows had some recent, minor storm damage however, this included small broken branches and twigs only, and the resulting damage did not provide suitable PRFs such as branch cavities.
- 4.39 The trees within the site were therefore categorised as having negligible potential roost habitat suitability with regard to bats, in accordance with the BCT 2016 Guidelines.

Preliminary Roost Assessment of Structures

- 4.40 The fire station was built circa 1960 and includes four main buildings. Other structures present include a small metal container, the fire tower and two electricity substation supply sheds.

Building 1

- 4.41 Building 1 is the active garage used for storing fire engines and the main reception office. Half the building is single storey where engine garages are present, the other half includes offices and storage rooms and has two stories. The building is composed of brick and currently occupied by the fire service staff. All the windows and doors are intact and composed of double glazing with PVC frames.

Figure 4. Western aspect of Building 1 with fire engine garages.

Figure 5. Eastern aspect of Building 1 with intact brick walls and flat roof.

- 4.42 The building has a flat roof covered in bitumen lining with intact concrete beams along the eaves over garage entrances. No roof void is present within Building 1 and there were no PRFs noted during external inspection, an internal inspection was therefore not required. An overhang providing cover for vehicles is present on the eastern side of the building and is composed of steel girders with bitumen lining.
- 4.43 Building 1 was categorised as having negligible potential roost habitat suitability for bats in accordance with the BCT 2016 Guidelines, as it had no features with potential to be used by roosting bats.

Building 2

- 4.44 Building 2 has three stories and provides office space for the fire service. The building is composed of brick and is currently occupied by the fire service staff. All the windows and doors are intact and composed of double glazing with PVC frames.
- 4.45 The building has a flat roof covered in bitumen lining with intact wooden eaves boards covered over with bitumen lining and intact soffit boxes. The building aspect adjacent to the A6133 has plastic cladding on the wall, around the windows. There are no gaps between the plastic cladding and the wall. No roof void is present within Building 2 and there were no PRFs noted during external inspection, an internal inspection was therefore not required.

- 4.46 Building 2 was categorised as having negligible potential roost habitat suitability for bats in accordance with the BCT 2016 Guidelines, as it had no features with potential to be used by roosting bats.

Figure 6. Northern aspect of Building 2 including fire service offices.

Figure 7. Southern aspect of Building 2 with plastic cladding surrounding windows.

Building 3

- 4.47 Building 3 is single storied and previously provided office space for the fire service station, though it is now unoccupied and has been boarded up as it is no longer safe to access. The building is composed of brick, with wooden soffit boxes. The windows on the eastern aspect have been bricked or boarded up to prevent access, whilst the windows and doors facing within the site are intact and composed of single glazing with wooden frames.
- 4.48 The building has a flat roof covered in bitumen lining. A small hole approximately 4cm x 2cm was present underneath the soffit box on the southern aspect of the building. Along the eastern aspect of the building the guttering has broken and fallen away from the soffit box, exposing the wooden panels within. However, the feature is open and damp from the lack of guttering.
- 4.49 No roof void is present within Building 3 and the PRFs noted during external inspection, provided potential external roost features only with no access to the internal structure. Internal inspection was not possible due to health and safety constraints.
- 4.50 Building 3 was categorised as having low potential roost habitat suitability for bats in accordance with the BCT 2016 Guidelines, as it has a couple of features suitable for use by individual bats and surrounding habitats provide limited suitability for foraging and commuting bats within the wider landscape.

Figure 8. Southern aspect of Building 3 with intact windows and flat bitumen lined roof.

Figure 9. PRF on southern aspect of Building 3 within soffit box.

Building 4

- 4.51 Building 4 is single storied and previously provided garage space for the fire service station, though it is now unoccupied and has been boarded up as it is no longer safe to access. The building is composed of brick, with wooden soffit boxes. All the windows and doors have been bricked or boarded up.
- 4.52 The building has a flat roof covered in bitumen lining. A small hole is present on the north-western corner of the soffit box where the wood has rotted away and the soffit box is accessible. However, the feature is very damp with the drainpipe leaking adjacent to the PRF. The bottom panel of the soffit box is also loose on the north-western corner of the building, providing a small crack with potential for access into the soffit box by bats. On the northern aspect of the building there is a gap in the brickwork where a service pipe is present, which may provide a PRF suitable for use by roosting bats.
- 4.53 Along the southern aspect of the building the bitumen roof lining has broken away from the fascia board, however, this does not provide a PRF as a cavity has not been created.
- 4.54 No roof void is present within Building 4 and the PRFs noted during external inspection, provided potential external roost features only with no access to the internal structure. Internal inspection was not possible due to health and safety constraints.
- 4.55 Building 4 was categorised as having low potential roost habitat suitability for bats in accordance with the BCT 2016 Guidelines, as it has a couple of features suitable for use by individual bats and surrounding habitats provide limited suitability for foraging and commuting bats within the wider landscape.

Figure 10. Western aspect of Building 4 with bricked up windows and garage doors, showing wooden soffit box and flat bitumen roof.

Figure 11. Eastern aspect of Building 4 with bricked up windows and broken guttering and fascia board.

Figure 12. Northern aspect of Building 4 with gap in brick work providing PRF.

Figure 13. North-western corner of soffit box on Building 4 with gap in rotted fascia board and a dropped panel underneath the soffit box.

Other Structures

- 4.56 Other structures present within the site including a small metal container, the fire tower and two electricity substation supply sheds, were categorised as having negligible potential roost habitat suitability for bats in accordance with the BCT 2016 Guidelines. These structures had no features with potential to be used by roosting bats.

Foraging and Commuting Habitats

- 4.57 The habitats within the site have negligible suitability in regard to commuting and foraging bats in the area and are likely to be used occasionally as part of the wider landscape. The site has poor habitat diversity, consisting mainly of hardstanding, buildings and amenity grassland and linear features such as hedgerows and woodland edge habitat, which are of value to commuting bats, are absent within the site and the adjacent landscape.

Figure 14. Power supply/storage shed in the north of the site.

Figure 15. Overhang on Building 1 and fire tower within the centre of the site.

Birds

4.58 The following bird species were recorded during the habitat walkover survey:

- Blackbird *Turdus merula*
- Blue tit *Cyanistes caeruleus*
- Dunnock *Prunella modularis* (S41, BAm)
- Eurasian tree sparrow *Passer montanus* (S41, BRd)
- Magpie *Pica pica*
- Robin *Erithacus rubecula*
- Wood pigeon *Columba palumbus*

4.59 The introduced shrub habitat along the north-western site boundary and the scattered broad-leaved trees within the site, provide nesting habitat for common and widespread bird species. A couple of old nests were evident within the introduced shrub. The habitats within the site provide limited foraging habitat for widespread and common species usually found within more urban habitats. The introduced shrub along the north-western boundary included berry producing plants suitable to support birds and invertebrates such as hawthorn *Crataegus monogyna* and elder *Sambucus nigra*.

Hedgehog

4.60 The introduced shrub and amenity grassland margins within the site provide some habitat for hedgehog commuting and foraging. However, the site is surrounded by fencing and a wall other than along the south-western site boundary which limits connectivity to other suitable habitats in the wider area.

Invertebrates

4.61 The habitats within the site are considered likely to support widespread and common invertebrate species but are unlikely to support any important invertebrate species assemblages. Invertebrates are therefore not considered further in this assessment.

Other Protected and Notable Species

4.62 Habitats within and adjacent to the site have no suitability to support terrestrial mammals such as brown hare, otter or water vole. Brown hare, otter and water vole are therefore not considered further in this assessment.

- 4.63 The habitats within the site do not provide suitable habitat for reptiles. Reptiles are therefore not considered further in this assessment.
- 4.64 No evidence of other habitat suitable for or any signs of legally protected or notable species were observed during the habitat walkover survey of the site.

Invasive Non-native Plant Species

- 4.65 A single cotoneaster plant *Cotoneaster* sp. is present within the introduced shrub along the north-west site boundary. Due to the absence of the cotoneaster berries and flowers at the time of survey it was not possible to confirm that this plant was not an invasive species as listed on Schedule 9 of the Wildlife and Countryside Act 1981 (as amended).

5.0 Conclusions and Discussions

- 5.1 This section concludes the potential impacts of future development of the site on the ecological receptors described in Section 4.0. Both adverse and beneficial impacts are considered. Impacts are assessed in accordance with the mitigation hierarchy - preferentially to avoid impacts or, where this is not possible, mitigate and, as a last resort, compensate (off-set).

Designated Sites and Priority Habitats

- 5.2 Given there are no international designated sites within 10km of the site and the distance of surrounding national designated sites from the site (between 2-10km), any future development is unlikely to have implications for these sites. The proposed development will be within the footprint of the existing buildings within the site and the site does not provide habitats suitable to support species associated with designated sites in the wider landscape. There will be no likelihood of a significant effect on these sites or the species they support as a result of development.
- 5.3 The site is also not directly connected to any areas of S41 habitats of principal importance and therefore future proposals are unlikely to incur any impact on these habitats.

Local Policy

- 5.4 Providing the proposed development complies with the National Planning Policy Framework (NPPF) and the Barnsley Metropolitan Borough Council Local Plan (adopted 3rd January 2019) there will be no implications for local biodiversity.

Habitats and Flora

- 5.5 The site is dominated by hardstanding and buildings which provide poor habitat diversity. The amenity grassland within the site is mown and has little botanical interest. The habitat of highest ecological value within the site includes the introduced shrub along the north-western boundary, which will not be affected by proposals.
- 5.6 A small strip of amenity grassland may be lost to provide a new appliance exit, however this habitat is of low ecological value and is not likely to negatively impact the ecological value of the site. The habitats within the site are overall of low ecological value and similar to habitats within the wider urban area of Barnsley.
- 5.7 No protected or notable plant species were recorded within the site during the walkover habitat survey.

Invasive Non-Native Species

- 5.8 A potential Schedule 9 invasive, non-native cotoneaster species is present within the site. It is an offence to allow the growth or spreading in the wild of any plant listed on Schedule 9 Part II of Section 14(2) of the Wildlife and Countryside Act 1981 (as amended). Due to the seasonal constraint in determining if the cotoneaster within the site is an invasive variety clearance or construction works where this potential Schedule 9 species has been recorded, will need to undertake best practice precautions to prevent spreading the species within the site or the wider landscape.

Protected and Notable Species

GCN and Other Amphibians

- 5.9 There are no ponds within 500m of the site or the site itself. Habitats within the site are of low suitability to support amphibian foraging, refuge and commuting being mainly composed of hardstanding or well-maintained amenity grassland. Barriers to amphibian dispersal from the south of the site include the A6133 and extensive residential development within the surrounding landscape. Amphibians would therefore be unlikely to disperse to the site from surrounding ponds and more suitable habitats in the wider landscape.
- 5.10 Future development of the site will not have implications with regard to GCN and other amphibians.

Badger

- 5.11 No badger activity was identified during the walkover habitat survey within the site. The habitats within the site are unsuitable to support badger. Future development of the site will not have implications with regard to badgers.

Bats

- 5.12 The site contains no trees with bat roost habitat suitability and the loss of trees would not result in the significant loss of natural features supporting roosting bat populations within the site locality. Proposals for the site do not include any tree loss.
- 5.13 Buildings 3 and 4 have low potential bat roost habitat suitability and are going to be demolished as part of development proposals. Therefore there will be implications with regard to roosting bats and additional assessment will be required.
- 5.14 Bats are legally protected as a European Protected Species under the Conservation of Habitats and Species Regulations (2017). All bats and their roosts are also protected under the Wildlife and Countryside Act (1981) as amended. It is an offence to:
- Disturb a bat or groups of bats in their roost;
 - Damage or destroy a bat roosting place, even if there are no bats present at the time;
 - To obstruct access to a bat roost; and
 - To capture, injure or kill a bat or possess, advertise, sell or exchange a bat, or part of a bat dead or alive.
- 5.15 The habitats within the site have negligible suitability in regard to commuting and foraging bats in the area and are likely to be used occasionally as part of the wider landscape. The site has poor habitat diversity and linear features such as hedgerows and woodland edge habitat, which are of value to commuting bats, are absent within the site and the adjacent landscape. Development of the site will not have implications for foraging and commuting bats.

Birds

- 5.16 The poor habitat diversity within the site is not suitable to support any Schedule 1 protected species recorded within the surrounding landscape.
- 5.17 Habitats present within the site are suitable for use by widespread and common bird species for foraging, with some limited nesting and refuge habitat provided by the introduced shrub and derelict buildings, particularly during the nesting bird season (March to August inclusive). All nesting birds are protected under the Wildlife and Countryside Act 1981 (as amended) and it is an offence to intentionally or recklessly, damage or destroy nests. There will be implications with regard to foraging and nesting birds as a result of proposed development of the site, if vegetation clearance is scheduled during the nesting season. Measures will therefore need to be implemented to avoid the potential disturbance or destruction of nests.

Hedgehog

- 5.18 Development of the site may have limited implications with regard to hedgehogs (S41) if vegetation clearance is required and the site is fenced or walled off from adjacent habitats.

6.0 Recommendations

- 6.1 This section sets out the recommendations for appropriate further survey, mitigation and enhancement based on the potential impacts set out in Section 5.0.

Habitats and Flora

- 6.2 Standard protection measures must be implemented during site clearance and construction to ensure no damage or deterioration to retained trees within or immediately adjacent to the site boundary. Protection measures will guard against compaction of root zones or damage of the canopy during site clearance and construction, in accordance with BS5837:2012 Trees in relation to design, demolition and construction.
- 6.3 Tree removal should be avoided. Where trees require removal replacement planting should be incorporated into the development design to compensate for any loss.
- 6.4 Standard pollution prevention and dust control measures should be set out in a Construction Environmental Management Plan (CEMP) and implemented during site clearance and construction works. These measures will ensure the potential for indirect impacts such as pollution, run-off and dust deposition on retained habitats within the site are reduced to a reasonable minimum.

Invasive Non-native Plant Species

- 6.5 It is recommended that the cotoneaster species along the north-western site boundary be removed to avoid spreading of this potential invasive species within the site and to other habitats within the wider landscape. The plant should be dug out at its root base, with care taken to collect any berries. The plant should be disposed of at a waste site that accepts schedule 9 invasive plant species.

Bats

- 6.6 Buildings 3 and 4 were categorised as having low potential bat roost habitat suitability and will require a single nocturnal roost survey during the bat active season (May to August inclusive) to confirm absence of roosting bats within the site prior to any demolition works. The survey may include a dusk emergence survey or a dawn re-entry survey to confirm presence or absence of roosting bats.
- 6.7 Following the nocturnal roost survey, if bats are confirmed roosting within the buildings there will be a requirement to obtain a European Protected Species (EPS) Mitigation Licence from Natural England (NE) prior to demolition works. Two additional nocturnal roost surveys will also be required to undertake roost characterisation.
- 6.8 Following submission of a licence application, NE aim to return the outcome of the licence application within 6 weeks. This should be taken into consideration in line with the proposed programme of works.

Birds

- 6.9 All nesting birds are protected under the Wildlife and Countryside Act 1981 (as amended) and it is an offence to intentionally or recklessly, damage or destroy nests. Therefore any vegetation clearance should be undertaken outside the bird nesting season (March to August inclusive). If this is not possible, a suitably qualified ecologist should carry out a nesting bird check, a maximum of 24 hours in advance of vegetation clearance works. If nesting birds are found, an appropriate exclusion zone will need to be set up around any active nests until the young have fledged with regular monitoring checks by an ecologist to advise when it is possible for clearance works to proceed.

Biodiversity Enhancement

- 6.10 If vegetation clearance under future works proposals is required, it is recommended that landscape planting should be implemented to provide sufficient replacement nesting and foraging habitat for birds and foraging and commuting habitat for hedgehogs to compensate for any habitat loss.
- 6.11 Landscape planting within the site should prioritise native and wildlife friendly shrub and tree species, preferably of local provenance. These should include some berry and nectar bearing species to enhance foraging opportunities for birds and invertebrates.
- 6.12 Further enhancements could be achieved by installing bird boxes on site to provide nesting opportunities such as the Schwegler 1B Bird Box, suitable for a range of species. Bat boxes to enhance roosting opportunities within the site such as, Beaumaris Woodstone Bat Box could be attached to any new buildings. Access for hedgehogs could also be created via access holes in existing perimeter fencing.

 Site Boundary

Relevant Local Planning Policies

Barnsley Local Plan (adopted January 2019)

The following policies relate to biodiversity and nature conservation and are applicable to the site:

Policy GI1 Green Infrastructure

We will protect, maintain, enhance and create an integrated network of connected and multi functional Green Infrastructure assets that:

- Provides attractive environments where people want to live, work, learn, play, visit and invest;
- Meets the environmental, social and economic needs of communities across the borough and the wider City Regions;
- Enhances the quality of life for present and future residents and visitors;
- Helps to meet the challenge of climate change;
- Enhances biodiversity and landscape character;
- Improves opportunities for recreation and tourism;
- Respects local distinctiveness and historical and cultural heritage;
- Maximises potential economic and social benefits; and
- Secures and improves linkages between green and blue spaces;

At a strategic level Barnsley's Green Infrastructure network includes the following corridors which are shown on the Green Infrastructure Diagram:

- River Deame Valley Corridor.
- River Dove Valley Corridor.
- River Don Valley Corridor.
- Dearne Valley Green Heart Corridor.
- Historic Landscape Corridor.

The network of Green Infrastructure will be secured by protecting open space, creating new open spaces as part of new development, and by using developer contributions to create and improve Green Infrastructure.

We have produced a Green Infrastructure Strategy for Barnsley which is informed by the Leeds City Region and South Yorkshire Green Infrastructure Strategies.

Policy BIO1 Biodiversity and Geodiversity

Development will be expected to conserve and enhance the biodiversity and geological features of the borough by:

- Protecting and improving habitats, species, sites of ecological value and sites of geological value with particular regard to designated wildlife and geological sites of international, national and local significance, ancient woodland and species and habitats of principal importance identified via Section 41 of the Natural Environment & Rural Communities Act 2006 (for list of the species and habitats of principal importance) and in the Bamsley Biodiversity Action Plan.
- Maximising biodiversity and geodiversity opportunities in and around new developments.
- Conserving and enhancing the form, local character and distinctiveness of the boroughs natural assets such as the river corridors of the Don, the Dearne and Dove as natural floodplains and important strategic wildlife corridors.
- Proposals will be expected to have followed the national mitigation hierarchy (avoid, mitigate, compensate) which is used to evaluate the impacts of a development on biodiversity interest.
- Protecting ancient and veteran trees where identified.
- Encouraging provision of biodiversity enhancements.

Development which may harm a biodiversity or geological feature or habitat, including ancient woodland and aged or veteran trees found outside ancient woodland, will not be permitted unless effective mitigation and/or compensatory measures can be ensured.

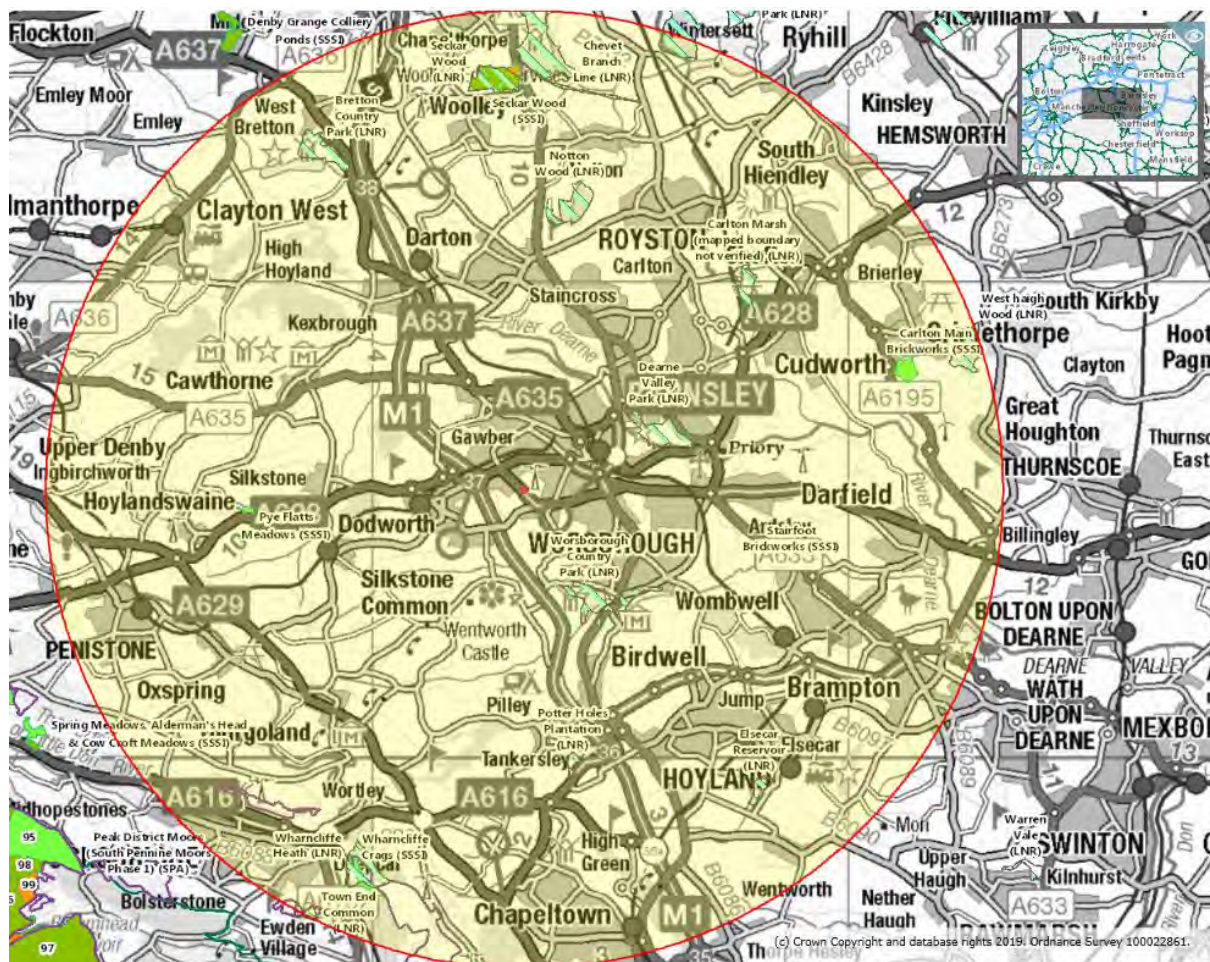

Development which adversely effects a European Site will not be permitted unless there is no alternative option and there are imperative reasons of overriding public interest (IROPI).

Site Designations

Internationally Designated Wildlife Sites within 10km of the Site

Source: MAGIC Maps

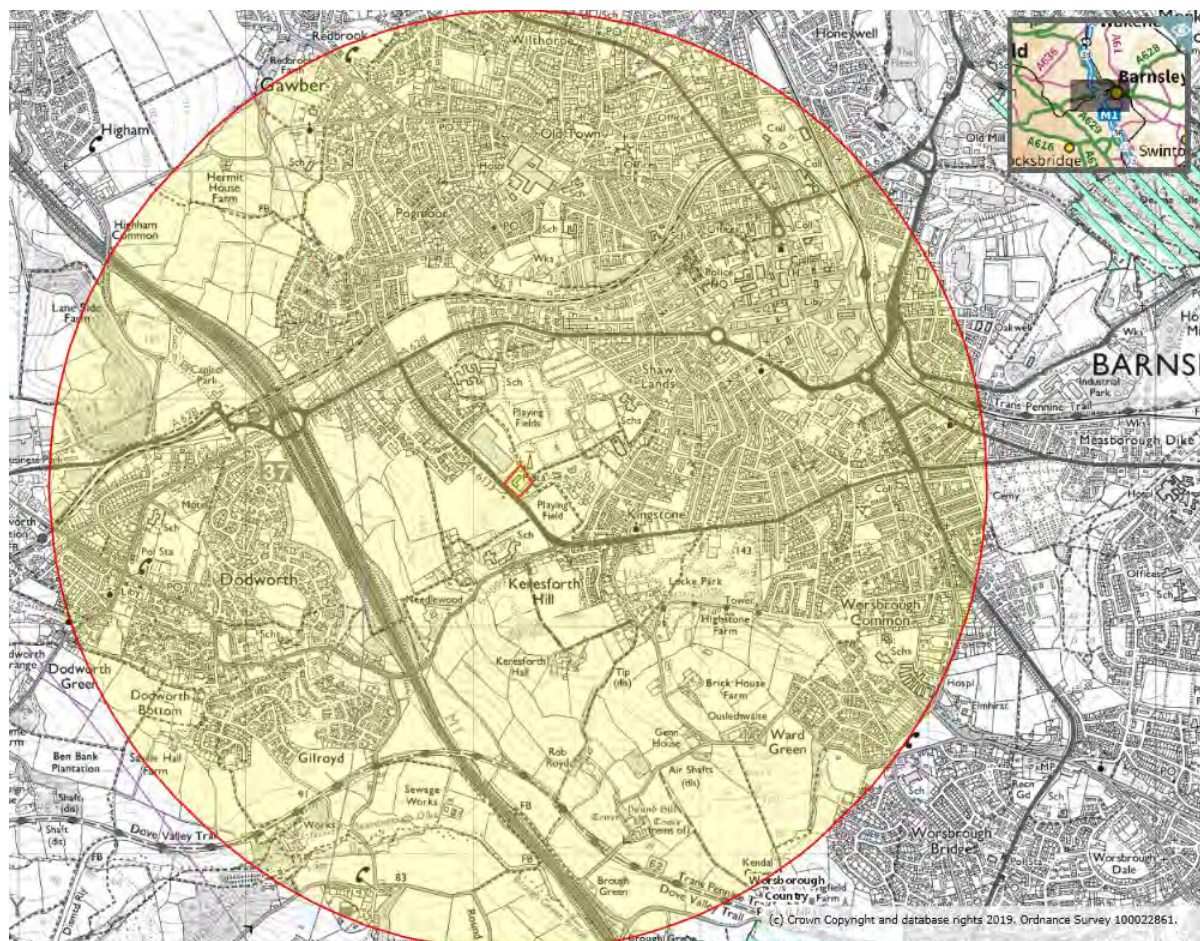

There are no internationally designated wildlife sites within 10km of the site.

Nationally Designated Wildlife Sites within 2km of the Site

Source: *MAGIC Maps*

There are no nationally designated wildlife sites within 2km of the site.

SSSI Impact Risk Zones for Site Only

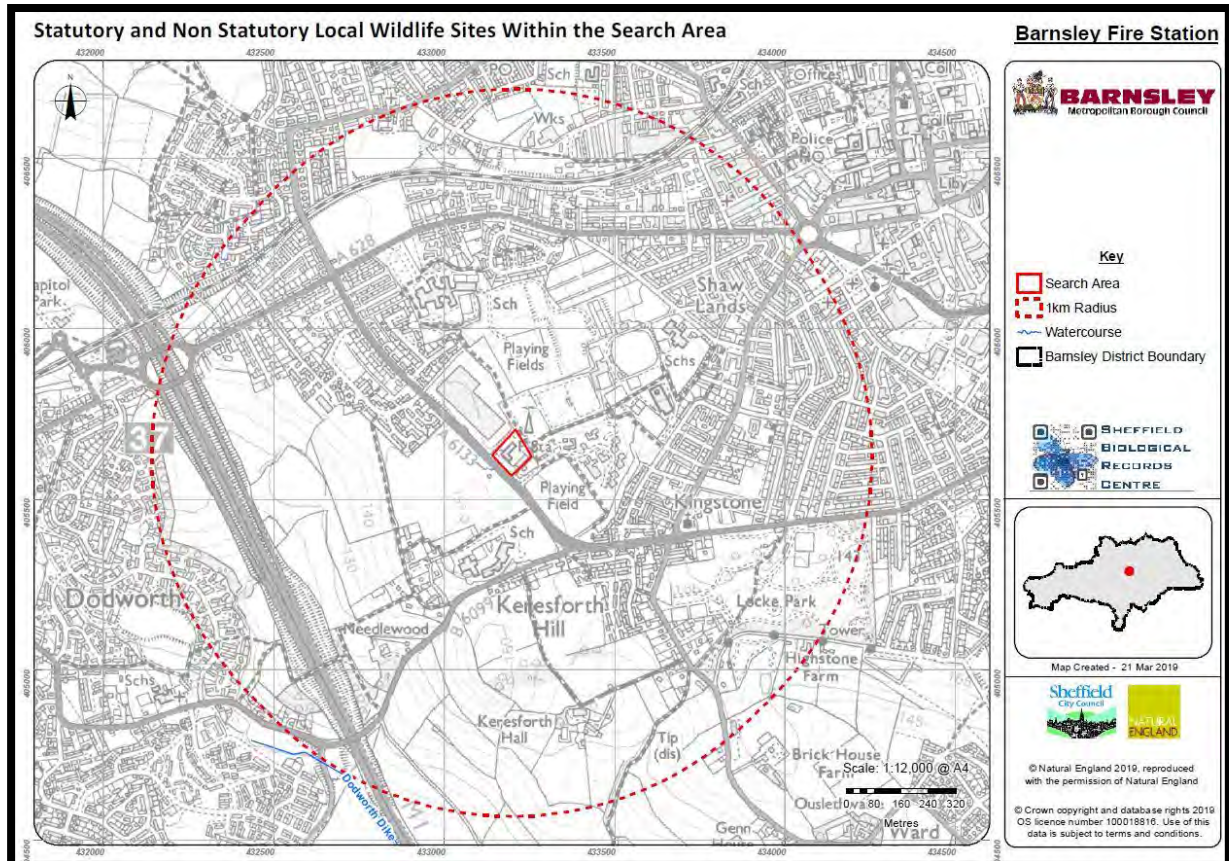

Source: *MAGIC Maps*

There are no SSSI impact risk zones which fall within the site.

Local Site Designations within 1km of the Site

Source: Magic Maps and Barnsley Biological Records Centre

There are no locally designated wildlife sites within 1km of the site.

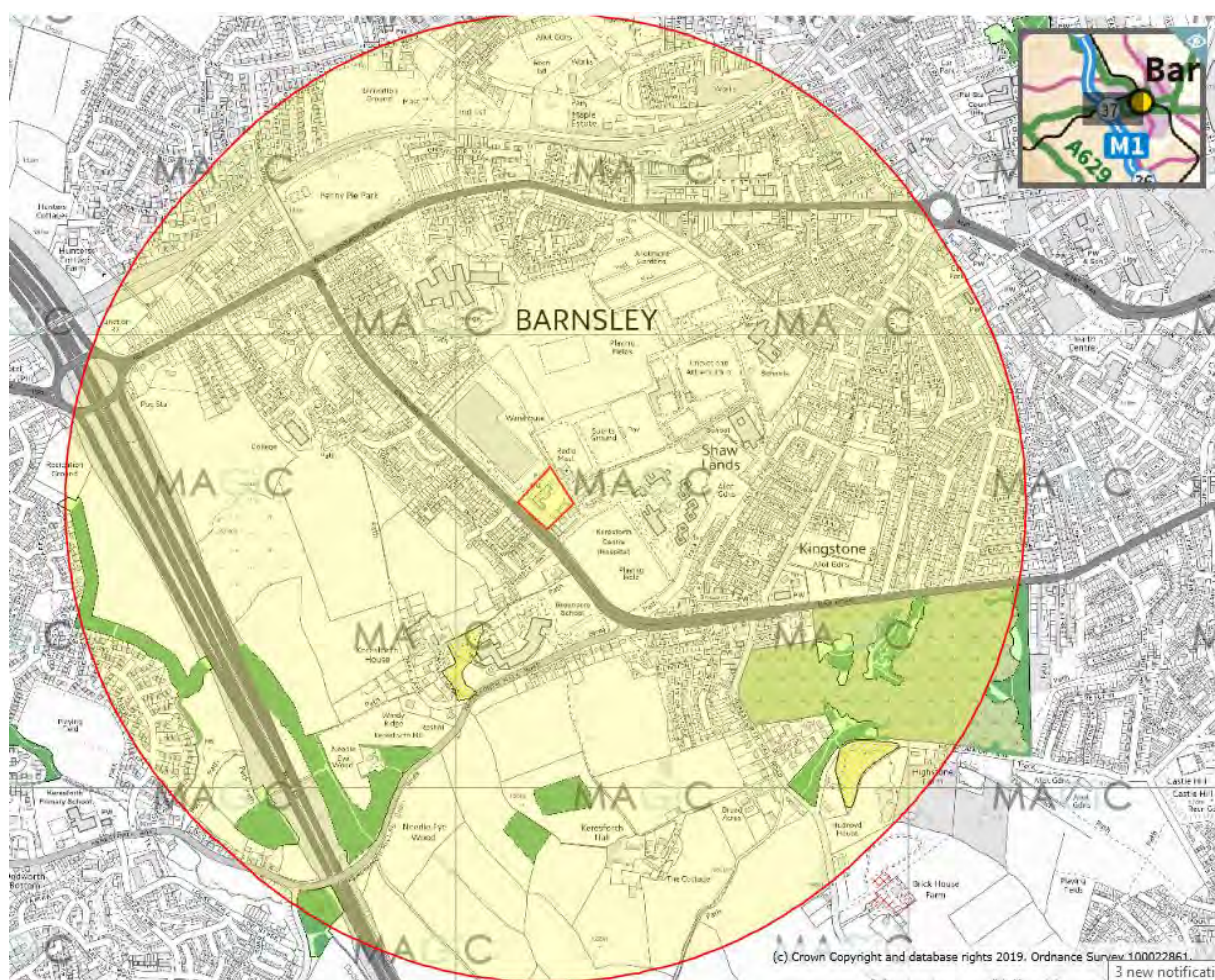

Note: The terms and conditions attached to the Barnsley Biological Records Centre search state that data is valid for one year, after which time a review of the data may be required.

Notable Habitats

Habitat Inventory Data within or Adjacent to the Site

Source: *MAGIC Maps*

There are no notable habitats within or adjacent to the site.

Notable Species

Extract of Species Data within 1km of the Site

Source: Barnsley Biological Records Centre

Note: The terms and conditions attached to the Barnsley Biological Records Centre search state that data is valid for one year, after which time the search may require updating.

Species records which are listed under the following have been included:

- European Protected Species (EPS);
- Protected bird species under Schedule 1 of the Wildlife and Countryside Act 1981, as amended (WCA1);
- Protected animal species under Schedule 5 of the Wildlife and Countryside Act 1981, as amended (WCA5);
- Protected plant species under Schedule 8 of the Wildlife and Countryside Act 1981, as amended (WCA8);
- Invasive non-native species under Schedule 9 of the Wildlife and Countryside Act 1981, as amended (WCA9);
- Species of principal importance under Section 41 of the Natural Environment and Rural Communities Act 2006 (S41); and
- Red and Amber listed Birds of Conservation Concern (BRd/BAm).

Local BAP Habitats and Species

Barnsley Biodiversity Action Plan

Habitats

- Lowland mixed deciduous woodland
- Upland oakwood (remnants in dark peak)
- Wet woodland
- Woodpasture and parkland (inc. veteran trees)
- Traditional orchards
- Lowland dry acid grassland
- Lowland meadow/neutral grassland
- Floodplain grazing marsh
- Purple moor grass and rush pasture
- Hedgerows
- Arable field margins
- Upland heath
- Lowland heath
- Blanket Bog
- Reedbeds
- Lowland fens
- Upland flushes, fens and swamps
- Rivers (running water)
- Ponds (standing water)
- Eutrophic standing water
- Open mosaic habitats on previously developed land

Species

- Brown Hare
- Mountain Hare
- Hedgehog
- Harvest Mouse
- Otter
- Water Vole
- Brown Long-eared Bat
- Noctule Bat
- Soprano Pipistrelle Bat
- Brandt's Bat
- Common Pipistrelle Bat
- Daubenton's Bat
- Leisler's Bat
- Natterer's Bat
- Whiskered Bat
- Cuckoo
- Curlew
- Grey Partridge
- Grasshopper Warbler
- House Sparrow
- Lapwing
- Lesser Spotted Woodpecker
- Lesser Redpoll
- Linnet
- Ring Ouzel
- Skylark
- Spotted Flycatcher
- Starling
- Song Thrush
- Tree Pipit
- Tree Sparrow
- Willow Tit
- Wood Warbler
- Yellowhammer
- Yellow Wagtail
- Grey wagtail
- Merlin
- Mistle thrush

Species Cont...

- Pied flycatcher
- Pochard
- Ringed Plover
- Whinchat
- Woodcock
- Bittern
- Bullfinch
- Dunnock
- Nightjar
- Red Grouse
- Reed Bunting
- Avocet
- Common tern
- Kingfisher
- House martin
- Redshank
- Short-eared owl
- Snipe
- Barn owl
- Little ringed plover
- Bullhead
- Brown trout
- Salmon
- Eel
- Grass snake
- Adder
- Slow worm
- Common lizard
- Great crested newt
- Common frog
- Common toad
- Smooth newt
- Palmate newt
- Various invertebrates (not yet specified on plan which species)
- Various plants (not yet specified on plan which species)

APPENDIX B: Target Notes Report

Target Notes Report – Barnsley Fire Station

Target Note 1

Amenity grassland is present around the buildings within the site, the largest area being present along the southern boundary with the A6133. The sward is short and well maintained.

Achillea millefolium
Agrostis stolonifera
Bellis perennis
Cardamine sp.
Cirsium vulgare
Dactylis glomerata
Epilobium montanum
Galium album
Galium aparine
Geranium dissectum
Holcus lanatus
Hypochaeris radicata
Lolium perenne
Moss sp.
Poa annua
Ranunculus repens
Rumex acetosa
Rumex obtusifolius
Senecio jacobaea
Senecio vulgaris
Stellaria media
Taraxacum officinale agg.
Trifolium repens
Urtica dioica

Yarrow
Creeping Bent
Daisy
Bitter-cress Species
Spear Thistle
Cock's-foot
Broad-leaved Willowherb
Hedge Bedstraw
Cleavers
Cut-leaved Cranesbill
Yorkshire-fog
Common Cat's-ear
Perennial Ryegrass
Moss species
Annual Meadow-grass
Creeping Buttercup
Common Sorrel
Broad-leaved Dock
Common Ragwort
Groundsel
Chickweed
Dandelion
White Clover
Nettle

Target Note 2

Ornamental shrubs are present with the site where landscape planting has been undertaken including several small areas within amenity grassland and along the western boundary. The ornamental shrub planting along the western boundary is managed as a hedgerow, growing at approximately 2.5m high. Passerines were noted within the ornamental shrub boundary feature including blackbird, robin and dunnoek.

Berberis sp.
Betula pendula
Buddleja davidii
Cornus sanguinea
Cotoneaster sp.
Crataegus monogyna
Euonymus sp.
Forsythia suspensa
Fraxinus excelsior
Hebe sp.
Hedera helix
Hedera sp.
Ilex aquifolium
Laburnum sp.
Narcissus sp.
Photinia × *fraseri*
Pittosporum sp.
Prunus laurocerasus
Rhododendron sp.
Rosa sp.
Rubus fruticosus agg.
Sambuccus nigra
Salix cinerea
Senecio jacobaea
Senecio vulgaris
Stellaria media
Symphoricarpos sp.
Taraxacum officinale agg.
Trifolium repens

Barberry
 Silver Birch
 Summer Lilac
 Dogwood
 Cotoneaster Species
 Hawthorn

 Weeping Forsythia
 Ash
 Hebe Species
 Ivy
 Ivy Species
 Holly
 Laburnum Species
 Daffodil
 Red Robin
 Cheesewood Species
 Cherry Laurel
 Azalea Species
 Rose Species
 Bramble
 Elder
 Grey Willow
 Common Ragwort
 Groundsel
 Chickweed
 Snowberry Species
 Dandelion
 White Clover

Target Note 3

Hardstanding and buildings are the dominant habitats within the site. Hardstanding areas include car parking and the entrance road within the site, in addition to concrete slab paving around the main office building.

Four main buildings are present within the site including the main fire engine garage and reception, the main office building and two derelict buildings along the eastern site boundary, which were formally offices and additional garage areas. Other structures within the site include a small metal container, the fire tower and two electricity substation supply sheds.

The buildings are all brick with flat, bitumen felt roofing and built circa 1960's.

Target Note 4

Infrequent scattered scrub is present along the northern site boundary, adjacent to the hardstanding.

Crataegus monogyna
Rubus fruticosus agg.
Sambuccus nigra

Hawthorn
Bramble
Elder

Salix cinerea

Grey Willow

Target Note 5

Two semi-mature weeping willows are present within the south-west of the site.

Salix babylonica

Weeping Willow

KEY - D = Dominant, A = Abundant, F = Frequent, O = Occasional, R = Rare
