

Hoyland Town Centre Development

Waste Management Plan

- SITE A - Will have no refuse collection, be managed by BMBC with daily/weekly street cleaning in line with BMBC's general management & street cleaning program
- SITE B - Will have daily refuse collection & car park cleaning, the exact number of collections & cleaning will be determined by Netto and their current management strategies.
- SITE C - 3 waste management systems in place to service the separate elements of the site:
- i. There will be a daily CP management, cleaning & waste collection on the Southgate site. This will remove all waste created by the market & kiosks on a daily basis with CP cleaning & waste collection daily.
 - ii. The service yard off High Croft that services the 3 x new retail units will house the bins for these units & be collected daily from the secure yard.
 - iii. The service yard off High Croft will also house the bins for the first & second floors of the existing Town Hall & once a use for this space has been determined then a management strategy will be implemented for this element of the scheme.
