This document has been prepared by Geol Consultants Limited (GEOL) for the titled project and should not be relied upon by any other third party or used for any other project without written authorisation being obtained from GEOL. This report was prepared for the sole use of the Client named above, and shall not be relied upon or transferred to any other party without the express written authorisation from GEOL. The findings and opinions provided in this document are given in good faith and are subject to the limitations and constraints imposed by the methods and information sources described in this report. Factual information, including, where stated, a visual inspection of the site, has been obtained from a variety of sources. GEOL assumes the third-party information to be reliable, but has not independently confirmed this, therefore, GEOL cannot and does not guarantee the authenticity or reliability of third-party information it has relied upon. The findings and opinions presented in this report are also relevant to the dates when the assessment was undertaken but should not necessarily be relied upon to represent conditions at a substantially later date. Further information, ground investigation, construction activities, change of site use, or the passage of time may reveal conditions that were not indicated in the data presented and therefore could not have been considered in the preparation of the report. Where such information might impact upon stated opinions, GEOL reserves the right to modify the opinions expressed in this report. Where opinions expressed in this report are based on current available guidelines and legislations, no liability can be accepted by GEOL for the effects of any future changes to such guidelines and legislation.

APPENDIX II	LANDMARK INFORMATION GROUP, ENVIROCHECK REPORT
APPENDIX III	BRITISH GEOLOGICAL SURVEY, RADON REPORT

1.0 Introduction

Geol Consultants Limited (GEOL) were instructed by DART Engineers Limited on behalf of MBooth Design Limited to produce a Phase I Preliminary Contamination Risk Assessment (PCRA) to facilitate a new commercial development on land adjacent to Church Street in Mapplewell near Barnsley in South Yorkshire. The site currently comprises tarmac and gravel hardstanding and is used for vehicle parking. The site is centred on National Grid Reference (NGR) 433090, 410110, and a site location plan and an aerial photograph showing the site can be seen attached in Appendix I.

A Coal Mining Risk Assessment (CMRA) was completed for the site, and considers the new development proposals, by GEOL Consultants, reference GEOL25-6165, dated October 2025. This PCRA should be read in conjunction with the CMRA Report.

Proposals have been made to construct 1 no. commercial unit on the site with associated vehicle parking. The purpose of this PCRA is to provide information relating to the following.

- ▼ Identify the environmental setting and likely ground conditions for the site, including details relating to the deeper geology, hydrogeology, hydrology and mining
- ▼ Identify the sites previous development history, usage, and activities with a view to determining any potential contaminants associated with the recorded site history and to assess the impacts from those contaminants towards the future site end-users (Human Health) and nearby sensitive receptors (Controlled Waters)
- ▼ Assess all potential sources of hazardous ground gas generation including radon gas
- ▼ Establish a preliminary Conceptual Site Model (CSM) and to identify all potential source, pathway, and receptor linkages
- ▼ Determine the scope of any further investigation works required for the site prior to commencing with the proposed commercial development

As part of this PCRA, a reconnaissance (walkover) survey was undertaken which involved an inspection of the site and immediate surrounding area. Site photographs taken during this survey can be seen in Appendix I and all relevant observations are noted in the Site Details section on the following page.

A review of currently available information from the following data sources has been undertaken to assist in the completion of this PCRA.

- ▼ British Geological Survey (BGS); geological maps, historical borehole records, where applicable

1.0 Introduction (Cont'd)

- ▼ Landmark Information Group, Envirocheck Report (ref. 386753791_1_1) including Ordnance Survey (OS) maps, attached in Appendix II
- ▼ Mining Remediation Authority; Online Interactive Map Viewer
- ▼ Environment Agency / GOV.UK
- ▼ Relevant guidance documents, these are listed within the report text, where applicable

2.0 Site Details

All relevant details and descriptions relating to the proposed development area (site) have been summarised in the Table below.

Detail	Description
Site address	Land at Church Street, Mapplewell, Barnsley, South Yorkshire, S75 6BU
NGR	433090, 410110
Shape and approximate size	Rectangular shaped parcel of land, occupying an area of 0.04Ha
Current site use	The site currently comprises tarmac and gravel hardstanding and is used for vehicle parking
Proposed site use	Proposals have been made to construct 1 no. commercial unit with associated vehicle parking
Surrounding land uses	The immediate surrounding area comprises residential dwellings to the north and east, White Rose Funeral Director to the south, and The Wentworth Arms pub to the west
Site topography	The site is relatively flat and lies at an approximate Above Ordnance Datum (AOD) of 105m
Additional features	Services were noted running below the site during the reconnaissance (walkover) survey; therefore, prior to undertaking any future investigation or construction works it would be prudent to obtain all existing utility / service plans, to avoid any unnecessary damage to any live services which may pass below the site

The site can be accessed via Blacker Road (B6131) to the south, on to Church Street. The site lies within a mixed commercial and residential setting.

3.0 Site Geology

In accordance with available BGS data and published maps, reference; Sheet SE31SW, 1:10,000 scale, dated 2005, the site lies within an area where superficial (drift) deposits are absent and bedrock deposits are present at or close to the surface, i.e. area of solid outcrop. A nearby archive BGS borehole (reference SE31SW227), sunk c.150m northwest of the site, recorded clay deposits to a depth of 1.20m before encountering weathered mudstone deposits. The bedrock deposits beneath the site are shown to comprise the Pennine Middle Coal Measures Formation (alternations of mudstone, siltstone, sandstone and coal seams) deposited between 309.5 and 318 million years ago during the Carboniferous Period. No geological faults are mapped below the site within the bedrock geology.

No artificial (made ground) deposits are recorded over the site area in accordance with available BGS mapping; however, given the historic and current development of the site, made ground deposits are expected.

Ground stability hazards on the site are listed in the Landmark Envirocheck Datasheet as no hazard and very low.

4.0 Coal Mining

The site is located within a Coal Consultation Area. The coalfield is divided into two areas, referred to as development high risk areas (DHRA's), and development low risk areas (DLRA's). The DHRA forms 15% of the coalfield area, where coal mining risks are present at shallow depth which are likely to affect new development. The DLRA forms 85% of the coalfield where past coal mining activity has taken place at enough depth that it poses low risk to new development. The Mining Remediation Authority places the site within a DHRA, where probable shallow coal workings may be present associated with the Stanley Main, Lower Coal. In terms of coal mining risk assessments, the basic principle which underpins the process is that within the defined Coal Authority development high risk areas there are existing recorded risks to the ground stability from coal mining legacy hazards and that new development proposals need to assess and mitigate these risks in the interests of public safety.

Therefore, a Coal Mining Risk Assessment (CMRA) Report, was completed for the site, and considers the new development proposals, by GEOL, reference GEOL25-6165, dated October 2025. The CMRA Report has identified a risk to the site from potential shallow unrecorded coal workings below the site within the Stanley Main, Lower Coal.

5.0 Historical Map Review

Copies of OS maps covering the site and adjacent land are contained within the Landmark Information Group, Envirocheck Report attached in Appendix II. The information contained within the Table below has been based on available OS maps and the observations noted during the reconnaissance (walkover) survey completed.

OS map date	Site	Adjacent land
1854 to 1894	The site is mapped as undeveloped land	The Wentworth Arms Inn is mapped c.20m west of the site and a small building has been constructed adjacent to the site's southern boundary. Residential dwellings are present to the west, southwest and southeast of the site. An Old Coal Pit is mapped c.200m to the northwest. By 1894, Reservoirs have been constructed c.250m to the southeast
1906 to 1948	Walls have been constructed around the site edges of the site, and a small structure is now present in the western site area, associated with the Police Station now labelled directly south of the site	A Police Station is now labelled adjacent to the site's southern boundary. Two small buildings have been constructed c.10m east and southeast of the site. In 1918 OS mapping, residential dwellings have been constructed directly north and east of the site
1956 to 1994	A building has been constructed in the southern and eastern portions of the site	More residential dwellings are marked c.80m north of the site. Buildings and infrastructure associated with North Gawber Colliery are now present c.150m southeast. In 1973 OS mapping, a Tip (Disused) has been labelled c.225m to the south of the site. By 1991, the buildings associated with North Gawber Colliery have either been demolished or redeveloped into commercial units and the tip is no longer labelled
1999 to 2025	Aerial photography of the site shows the central and northern site areas to be covered by soft landscaping while buildings are still present in the eastern, western and southern portions of the site with associated hard landscaping. In April 2021 Google Maps, the buildings on site have been demolished and the site is in use as a car park	Aerial photography shows the area around the site to have been fully developed primarily with residential dwellings with commercial units further south

5.0 Historical Map Review (Cont'd)

The OS mapping indicates that the site was first developed at the beginning of the 20th century with buildings associated with the adjacent police station which was later converted into a funeral directors. The site is now in use as a car park.

The surrounding area predominantly comprises residential dwellings with some commercial units.

A reconnaissance (walkover) survey was undertaken during October 2025. The survey involved walking over the site and the surrounding area, recording any information which may be relevant to the project. Photographs taken during the reconnaissance (walkover) survey can be seen attached in Appendix I.

6.0 Environmental Setting

6.1 Surface Mineral Extraction / Quarrying

Based on OS maps dating from 1854 to 2025, there is evidence of historical surface mineral extraction or quarrying features recorded within a plausible, lateral migration distance (<250m) consisting of an Old Coal Pit c.200m northwest of the site which was later infilled by 1978.

6.2 Hydrogeology

The bedrock deposits underlying the site are designated as a Secondary A Aquifer recorded to be at high vulnerability. Secondary A Aquifers comprise permeable layers that can support local water supplies and may form an important source of base flow to rivers.

When considering the anticipated ground conditions below the site, the groundwater table is expected to be at depth within the bedrock geology. However, water strikes may occur at shallow depths within the completely weathered deposits, originating from perched / trapped water within granular layers. During the reconnaissance (walkover) survey there were no significant areas of surface standing water noted.

The Landmark Information Group, Envirocheck Report records no Water Abstractions or Source Protection Zones (SPZ's) within 500m of the site.

When considering the recorded site history, the site is not considered to represent a significant risk to groundwater or drinking water supplies / abstractions.

6.0 Environmental Setting (Cont'd)

6.3 Hydrology

The nearest surface water feature is recorded 189m west of the site associated with a drain.

The site lies within a Flood Zone 1, an area with a low probability of flooding with <1 in 1000 chance of fluvial flooding occurring (<0.1%), and therefore this site is unlikely to be at significant risk from future flooding.

According to the GOV.UK Long Term Flood Risk Information Interactive Map, the site is shown to lie within an area at very low risk (<0.1%) of surface water (pluvial) flooding occurring. Appropriate surface water management will need to be adopted to deal with the future management of positively drained surface water, when considering the future development of this site.

6.4 Landfill & Waste

The Landmark Information Group, Envirocheck Report identifies no Landfill / Waste records within a plausible migration distance (<250m) from the site's boundaries.

The Landmark Information Group, Envirocheck Report identifies 3 no. records of potentially infilled land (non-water) situated 118m and 137m southeast, and 215m northwest as well as 1 no. record of potentially infilled land (water) located 193m northeast. No other records are noted within 250m of the site's boundaries.

6.5 Radon Assessment

The BRE Digest, BR211 (2015 & 2023) Radon: Guidance on protective measures for new buildings, indicates the site to lie within a lightly shaded grid square (1km) where basic radon protective measures will be required for new structures.

Reference to the UKRadon.org mapping indicated the site is located in a band of radon potential where 5% to 10% of homes at or above the Action Level.

6.0 Environmental Setting (Cont'd)

6.5 Radon Assessment (Cont'd)

The Landmark Information Group, Envirocheck Report records the site to lie in an intermediate probability radon area, where 1% to 3% of homes are estimated to be at or above the Action Level in accordance with data held by the BGS, and their assessment indicates that no radon protection measures are necessary in the construction of new dwellings or extensions.

Given the conflicting information stated above regarding the assessment of radon risk at the site, a site-specific Radon Report (reference BGS_345039/63293), was procured directly from the BGS, which can be seen in Appendix III. The BGS Radon Report states the site lies within an area where 1% to 3% of homes are estimated to be at the Action Level, and therefore no protective measures are required for new buildings constructed at the site.

6.6 Site Ecology

The Landmark Information Group, Envirocheck Report records the site to lie within a Nitrate Vulnerable Zone along with one located 351m to the north of the site. Nitrate Vulnerable Zones are areas recorded as being at risk from agricultural nitrate pollution. No other areas of sensitive land-use are recorded within a 500m radius of the site.

During the reconnaissance (walkover) survey completed, there was no obvious evidence to suggest the site is affected by the presence of invasive weed species (i.e. Japanese Knotweed), although a detailed ecological survey has not been completed as part of this PCRA.

7.0 Regulatory Database

The information given in the Table on the following page has been obtained from a commercially available database and is contained within the Landmark Information Group, Envirocheck Report attached in Appendix II. The information presented in the Table only includes records not otherwise detailed in the report.

7.0 Regulatory Database (Cont'd)

Data type	0 – 250m	251 – 500m	Details
Local Authority Pollution Prevention and Controls	0	1	The record is located 490m southeast of the site, described as 'PG1/1Waste oil burners, less than 0.4MW net rated thermal input'
Pollution Incidents to Controlled Waters	0	2	The nearest record is situated 273m southwest of the site, occurring in September 1992. The incident involved an unknown pollutant entering a freshwater stream / river and was categorised as a Category 3 – Minor Incident
Substantiated Pollution Incident Register	0	1	The record is situated 275m south of the site, occurring in June 2001. The incident involved smoke and contaminated water from firefighting run-off and had an Air Impact of Category 2 – Significant Incident, and a Land Impact of Category 3 – Minor Incident
Contemporary Trade Directory Entries (CTDE)	36	17	The closest record is situated 18m northwest of the site, named 'Peter Prest' and has a status of 'Inactive'

8.0 Contamination and Ground Gas Risk Assessment

The risks posed towards Human Health or environmental receptors (i.e. Controlled Waters) is based on an assessment of one or more source-pathway-receptor linkages. The source is any substance which has the potential to cause significant harm to a relevant receptor and the pathway is any route by which contamination may travel to impact on a receptor. The preliminary Conceptual Site Model (CSM) summarises the principal contaminant sources, pathways and receptors for this site and the likelihood of the existence of a pollutant linkage. The significance of the potential source-pathway-receptor linkages identified within the preliminary CSM can be assessed using the following criteria.

- ▼ LOW risk – not likely to cause significant harm to Human Health or Controlled Waters. Remedial measures are not likely to be required
- ▼ MEDIUM risk – it is possible that significant harm to Human Health or Controlled Waters could occur depending on site specific circumstances. Remedial measures may be required to mitigate potential risks
- ▼ HIGH risk – it is likely that significant harm to Human Health or Controlled Waters will occur unless appropriate remedial measures are incorporated into the development

8.0 Contamination and Ground Gas Risk Assessment (Cont'd)

The potential pollutant linkages pertaining to the site and the assessed significance are summarised in the preliminary CSM Table on the following page.

The OS mapping indicates that the site was first developed at the beginning of the 20th century with buildings associated with the adjacent police station which was later converted into a funeral directors. The site is now in use as a car park.

Given the historical site use, the risk of significant contamination being present on this site is LOW when also considering the proposed end-use of Commercial.

At this stage, made ground deposits are expected on the site given the historical and current site use. Although no soft landscaping is planned, it would be prudent to assess the levels of contamination present within the made ground deposits present over the site to determine the suitability for their intended end-use (Commercial), and to assist with the disposal of surplus soil deposits which are likely to be generated as part of the proposed development / construction work.

Representative samples of soil can be screened for standard metals and semi-metals including As, Cd, Cr (III & VI), Cu, Hg, Ni, Pb, Se, Zn, CN, as well as Polycyclic Aromatic Hydrocarbons (PAH's – 16 USEPA Specification), Petroleum Hydrocarbons (Aliphatic / Aromatic split) and Asbestos screening. Laboratory testing should also be undertaken on samples of natural and any made ground soils for naturally aggressive chemicals (pH value and soluble sulphate) which could have a potential effect on buried concrete.

The risk of hazardous ground gases from on-site and off-site sources is considered MEDIUM, due to probable shallow unrecorded coal workings being present beneath the site within the Stanley Main, Lower Coal.

Therefore, a detailed ground gas risk assessment along with the completion of insitu ground gas monitoring will be required to confirm the ground gas regime more accurately and with more confidence.

Consideration may need to be given to the protection of new service pipes which are to be incorporated into the new development, and therefore a supplementary suite of contamination testing (UKWIR suite) may be required to meet the requirements of the Utility service providers to satisfy their own pipe selection risk assessment (PSRA) once the location and depth of future services have been determined.

8.0 Contamination and Ground Gas Risk Assessment (Cont'd)

Potential source	Pathway	Receptor	Pollutant linkage / assessed risk
Made Ground Deposits	Dermal contact and ingestion / inhalation of contaminated soil and dust	Human site users - Construction workers and end-users	LOW risk
	Air – Inhalation of vapours (indoor & outdoor)		LOW risk
	Plant uptake, consumption of homegrown vegetables	End-users	No pathways present
	Migration through services	End-users	LOW risk
	Direct contact with building materials	Building materials (concrete)	LOW risk
	Surface run-off, vertical and lateral infiltration / leaching, and migration of mobile contaminants	Localised shallow perched water. Deep groundwater within the solid geology	LOW risk
	Contaminated soils	Flora and Fauna in gardens on completion of building works	No pathways present
Ground gas	Lateral & vertical migration	End-users (Asphyxiation, fire & explosion)	MEDIUM risk
Radon gas	Lateral & vertical migration	End-users (Carcinogenic)	LOW risk

9.0 Geotechnical Risk Assessment

The ground conditions below the site are expected to comprise made ground deposits, overlying natural bedrock deposits of the Pennine Middle Coal Measures Formation. The anticipated ground profile for this site has been summarised in the Table below and on the following page.

Strata type	Anticipated thickness	Groundwater	Comments
Made Ground	<1m	Perched / trapped water is expected within granular deposits	Nominal thicknesses of made ground deposits are expected in the eastern site area

9.0 Geotechnical Risk Assessment (Cont'd)

Strata type	Anticipated thickness	Groundwater	Comments
Pennine Middle Coal Measures Formation	>50m	Deep groundwater is expected within the bedrock. These deposits have been designated as a Secondary A Aquifer	These deposits are expected to comprise mudstone, siltstone, sandstone and coal seams

A summary of the anticipated potential risks associated with the geotechnical issues and hazards identified for this site can be seen in the Table below and on the following page. The definitions for the allocated level of risk(s) are as follows.

- ▼ LOW risk – unlikely to impact on the proposed development
- ▼ MEDIUM risk – may have a significant impact on the proposed development
- ▼ HIGH risk – likely to have a significant impact on the proposed development

Issue or hazard	Level of potential risk	Comments
Made Ground	LOW risk	Made ground deposits are expected over the eastern site area
Natural deposits	LOW risk	The natural deposits are expected to comprise bedrock deposits at shallow depth
Shallow groundwater	LOW risk	Groundwater is expected to be present at depth within the bedrock deposits, although perched / trapped water may be present within any shallow granular made ground deposits
Stability of excavations	LOW risk	Within future excavations, any made ground and initial natural deposits could be unstable below depths of c.1.20m and adequate lateral support will be required
Sub-surface structures	LOW to MEDIUM risk	Any sub-structures encountered during the site works should be grubbed up and removed off site
Shallow coal workings	HIGH risk	The site is in an area at risk from probable unrecorded shallow coal workings within the Stanley Main, Lower Coal
Mine entries (shafts / adits)	LOW risk	There is 1 no. mine entry c.60m west of the site, though not thought to pose a risk

9.0 Geotechnical Risk Assessment (Cont'd)

Issue or hazard	Level of potential risk	Comments
Control of surface drainage	MEDIUM risk	Conventional SuDS (i.e. soakaways) may be viable for this site, depending on the nature of the initial bedrock deposits
Flooding	LOW risk	The site lies within a Zone 1 Flood Risk Area

Based on the various data sources reviewed, the foundation options given in the Table below are likely to be available for the proposed development.

Foundation type	Anticipated depth to bearing stratum	Maximum allowable bearing pressure	Comments
Shallow conventional foundations	Between 1m and 2m	Between 75kN/m ² and 150kN/m ²	Where thin deposits of made ground are present over competent natural deposits, this foundation option would be the most feasible for the proposed development
Deep Trench Foundations	Between 2m and 3m	>100kN/m ²	Feasible where made ground deposits do not exceed beyond 3m in thickness, and competent natural deposits are present below
Raft	Up to 1m	40kN/m ² and 75kN/m ²	If the made ground and initial natural deposits are poor in nature, then a raft foundation may be considered

Prior to the commencement of the development, it is recommended that a programme of appropriate geotechnical intrusive investigation work is carried out across the site to determine the ground conditions with more certainty. This will allow for accurate foundation designs to be made.

10.0 Further Recommendations

It is recommended that appropriate site-specific investigation works forming a detailed Phase II Ground Investigation be completed for this site, prior to commencing with the proposed commercial development. This investigation should include for the items listed below, on the following page or similar exploratory work.

- Undertake a series of shallow percussion boreholes, including appropriate insitu geotechnical testing to help aid with future foundation designs

10.0 Further Recommendations (Cont'd)

- ▼ Undertake a series of rotary open boreholes to confirm the depth and condition of the Stanley Main, Lower Coal
- ▼ Undertake appropriate geotechnical laboratory classification testing, dependant on the soils / deposits encountered below the site area, and pH and soluble sulphate testing
- ▼ Undertake appropriate confirmatory contamination screening on selected samples of made ground recovered from site to confirm the suitability of these deposits to remain onsite within a proposed end-use of Commercial. The samples of soil collected should also be forwarded to a UKAS and MCERTS accredited laboratory
- ▼ Production of a Phase II Ground Investigation Report, to include Ground Contamination and Ground Gas Risk Assessments

Furthermore, prior to site investigation works commencing, all existing utilities / services should be identified and recorded, such that any potential damage to services crossing the site can be prevented, as well as ensuring the Health and Safety of all future site workers.

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840's. In 1854 the 1:2,500 scale was adopted for mapping urban areas, these maps were used to produce the 1:10,560 scale maps. The publication of these maps is based on the Cassini Projection, which is independent of scale of any county or ground contours, giving rise to significant inaccuracies in outlying areas. In the late 1940's a Provisional Edition was produced, which updated the 1:10,560 mapping from a number of sources. The maps appear unfinished - with all military camps and other strategic sites removed. These maps were initially overlaid with the National Grid. In 1970, the first 1:10,000 maps were produced using the Transverse Mercator Projection. The revision process continued until recently, with new editions appearing every 10 years or so for urban areas.

Ordnance Survey Plan Published 1991 - 1993 Source map scale - 1:10,000

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840's. In 1854 the 1:2,500 scale was adopted for mapping urban areas, these maps were used to update the plan for urban areas. The publication date 1991-1993 refers to the date the maps were published. The maps were based on the Cassini Projection, which is independent of any county or county boundaries, giving rise to significant inaccuracies in outlying areas. In the late 1940's a Provisional Edition was produced, which updated the 1:10,560 mapping from a number of sources. The maps appear unfinished - with all military camps and other strategic sites removed. These maps were initially overlaid with the National Grid. In 1970, the first 1:10,000 maps were produced using the Transverse Mercator Projection. The revision process continued until recently, with new editions appearing every 10 years or so for urban areas.

10k Raster Mapping

Published 2000

Source map scale - 1:10,000

The historical maps shown were produced from the Ordnance Survey's 1:10,000 colour raster mapping. These maps are derived from Lanplan which replaced the old 1:10,000 maps originally published in 1970. The data is highly detailed showing buildings, trees and boundaries as well as all features and boundaries. The maps are produced as a single map as the relevant road number and classification. Boundary information is derived from county, unitary authority, district, civil parish and constituency.

VectorMap Local Published 2025

Source map scale - 1:10,000

VectorMap Local (Raster) is Ordnance Survey's highest detailed 'backdrop' mapping product. These maps are produced from OS's VectorMap Local, a simple raster dataset at a nominal scale of 1:10,000, covering the whole of Great Britain. It has been designed for creating graphical mapping. VectorMap Local is a raster map product at a nominal scale of 1:10,000, covering major towns and cities at a smaller scale (smaller villages and developed rural areas), and 1:10,000 scale (mountain, moorland and river estuary areas).

Large-Scale National Grid Data Published 1993

Source map scale - 1:1,250

Large-Scale National Grid Data superseded SIM cards (Ordinance Survey's Survey of Information Microfilm) in 1992, and continued to be produced until 1999. These maps were the forerunners of digital mapping and so provide detailed information on houses and roads, but tend to show less detail on trees and other site data's vegetation. These maps were produced at both 1:2,500 and 1:12,500 scales.

Introduction

The Environment Act 1995 has made site sensitivity a key issue, as the legislation pays as much attention to the pathways by which contamination could spread, and to the vulnerable targets of contamination, as it does the potential sources of contamination. For this reason, Landmark's Site Sensitivity maps and Datasheet(s) place great emphasis on statutory data provided by the Environment Agency/Natural Resources Wales and the Scottish Environment Protection Agency; it also incorporates data from Natural England (and the Scottish and Welsh equivalents) and Local Authorities; and highlights hydrogeological features required by environmental and geotechnical consultants. It does not include any information concerning past uses of land. The datasheet is produced by querying the Landmark database to a distance defined by the client from a site boundary provided by the client. In this datasheet the National Grid References (NGRs) are rounded to the nearest 10m in accordance with Landmark's agreements with a number of Data Suppliers.

Radon Report

Advisory report on the requirement for radon protective measures in new buildings, conversions and extensions to existing buildings. The report also indicates whether a site is located within a radon Affected Area

Report Id: *BGS_345039/63293*

Client reference: GEOL25-6165

Search location

Contains OS data © Crown Copyright and database right 2025. OS OpenMap Local: Scale: 1:5 000 (1 cm = 50 m)

Search location indicated in red

Point centred at: 433090,410110

Radon Report: UK

When extensions are made to existing buildings in high radon areas, or new buildings are constructed in these areas, the Building Regulations for England, Wales, Scotland and Northern Ireland require that protective measures are taken against radon entering the building.

This report provides information on whether radon protective measures are required. Depending on the probability of buildings having high radon levels, the Regulations may require either:

1. No protective measures
2. Basic protective measures
3. Full protective measures

This is an advisory report on the requirement for radon protective measures in new buildings, conversions and extensions. The report also indicates whether a site is located within a radon Affected Area

Requirement for radon protective measures

The determination below follows advice in *BR211 Radon: Guidance on protective measures for new buildings (2023 edition)*, which also provides guidance on what to do if the result indicates that protective measures are required.

Is the property in an area where radon protective measures are required for new buildings or extensions to existing ones as described in publication BR211 (2023 edition) Radon: Guidance on protective measures for new buildings?

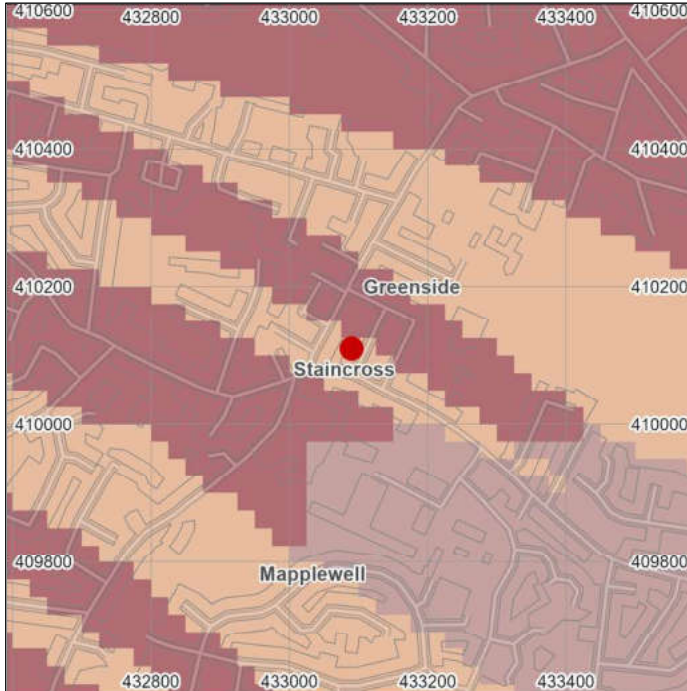

NO RADON PROTECTIVE MEASURES ARE REQUIRED FOR THE REPORT AREA.

More details of the protective measures required are available in *BR211 Radon: Guidance on protective measures for new buildings (2023 Edition)*.

Whether or not the radon level in a building is above or below the radon Action Level can only be established by having the building tested. The UKHSA provides a radon testing service which can be accessed at www.ukradon.org or by telephone (01235 822622).

If you require further information or guidance, you should contact your local authority building control officer or approved inspector.

Radon Affected Area

% Homes estimated to be at or above the action level

Scale: 1:10 000 (1cm = 100 m)

Search area indicated in red

Is the property in a radon Affected Area as defined by the UK Health Security Agency (UKHSA) and if so what percentage of homes are estimated to be at or above the Action Level? **YES**

Additional Information

THE PROPERTY IS IN A RADON AFFECTED AREAS WHERE 1 TO 3% OF HOMES ARE ESTIMATED TO BE AT OR ABOVE THE ACTION LEVEL.

The UKHSA recommends a radon 'Action Level' of 200 Becquerels per cubic metre of air ($Bq\ m^{-3}$) for the annual average of the radon gas concentration in a home. Where 1% or more of homes are estimated to be at or above the Action Level the area should be regarded as a radon Affected Area.

This report informs you whether the property is in a radon Affected Area and the percentage of homes that are estimated to be at or above the radon Action Level at this location. Being in an Affected Area does not necessarily mean there is a high radon level within the property; the only way to determine the radon level is to carry out a radon measurement.

The UKHSA advises that radon gas should be measured in all properties within radon Affected Areas and that homes with radon levels at or above the Action Level (200 Bq m⁻³) should be remediated. Householders with levels between the Target Level (100 Bq m⁻³) and Action Level should seriously consider reducing their radon level, especially if they are at greater risk, such as if they are current or ex smokers. Whether or not a home is in fact above or below the Action Level or Target Level can only be established by having the building tested. The UKHSA provides a validated radon testing service which can be accessed at www.ukradon.org.

The information in this report provides an answer to one of the standard legal enquiries on house purchase in England and Wales, known as Law Society CON29 Enquiries of the Local Authority (2016); 3.14 Radon Gas: Do records indicate that the property is in a “Radon Affected Area” as identified by the UKHSA. The data can also be used to advise house buyers and sellers in Scotland and Northern Ireland.

If you are buying a new build property in a Radon Affected Area, you should ask the builder whether radon protective measures were incorporated in the construction of the property.

If you are buying a currently occupied property in a radon Affected Area, you should ask the present owner whether radon levels have been measured in the property. If they have, ask whether the results were at or above the radon Action Level and if so, whether remedial measures were installed, radon levels were re-tested, and if the results of re-testing confirmed the effectiveness of the measures.

Further information on radon is available from the UKHSA at www.ukradon.org.

What is radon?

Radon is a naturally occurring radioactive gas, which is produced by the radioactive decay of radium which, in turn, is derived from the radioactive decay of uranium. Uranium is found in small quantities in all soils and rocks, although the amount varies from place to place. Radon released from rocks and soils is quickly diluted in the atmosphere. Concentrations in the open air are normally very low and do not present a hazard. Radon that enters enclosed spaces such as some buildings (particularly basements), caves, mines, and tunnels may reach high concentrations in some circumstances. The construction method and degree of ventilation will influence radon levels in individual buildings. A person's exposure to radon will also vary according to how particular buildings and spaces are used.

Inhalation of the radioactive decay products of radon gas increases the chance of developing lung cancer. If individuals are exposed to high concentrations for significant periods of time, there may be cause for concern. In order to limit the risk to individuals, the Government has adopted an Action Level for radon in homes of 200 becquerels per cubic metre (Bq m⁻³). The Government advises householders that, where the radon level is at or above the Action Level, measures should be taken to reduce the concentration.

Radon in workplaces

The Ionising Radiation Regulations 2017 require employers to take action when radon is present above a defined level in the workplace. Advice may be obtained from your local Health and Safety Executive Area Office or the Environmental Health Department of your local authority. The BRE publishes a guide (BR293): **Radon in the workplace**. BRE publications may be obtained from the BRE Bookshop, Tel: 01923 664262, email: bookshop@bre.co.uk website: www.brebookshop.com

Terms and Conditions

General Terms & Conditions

This Report is supplied in accordance with the GeoReports Terms & Conditions available on the BGS website at <https://shop.bgs.ac.uk/georeports> and also available from the BGS Enquiry Service at the above address.

Important notes about this Report

- The data, information and related records supplied in this Report by BGS can only be indicative and should not be taken as a substitute for specialist interpretations, professional advice and/or detailed site investigations. You must seek professional advice before making technical interpretations on the basis of the materials provided.
- Geological observations and interpretations are made according to the prevailing understanding of the subject at the time. The quality of such observations and interpretations may be affected by the availability of new data, by subsequent advances in knowledge, improved methods of interpretation, and better access to sampling locations.
- Raw data may have been transcribed from analogue to digital format, or may have been acquired by means of automated measuring techniques. Although such processes are subjected to quality control to ensure reliability where possible, some raw data may have been processed without human intervention and may in consequence contain undetected errors.
- Detail, which is clearly defined and accurately depicted on large-scale maps, may be lost when small-scale maps are derived from them.
- Although samples and records are maintained with all reasonable care, there may be some deterioration in the long term.
- The most appropriate techniques for copying original records are used, but there may be some loss of detail and dimensional distortion when such records are copied.
- Data may be compiled from the disparate sources of information at BGS's disposal, including material donated to BGS by third parties, and may not originally have been subject to any verification or other quality control process.
- Data, information and related records, which have been donated to BGS, have been produced for a specific purpose, and that may affect the type and completeness of the data recorded and any interpretation. The nature and purpose of data collection, and the age of the resultant material may render it unsuitable for certain applications/uses. You must verify the suitability of the material for your intended usage.
- If a report or other output is produced for you on the basis of data you have provided to BGS, or your own data input into a BGS system, please do not rely on it as a source of information about other areas or geological features, as the report may omit important details.
- The topography shown on any map extracts is based on the latest OS mapping and is not necessarily the same as that used in the original compilation of the BGS geological map, and to which the geological linework available at that time was fitted.
- Note that for some sites, the latest available records may be historical in nature, and while every effort is made to place the analysis in a modern geological context, it is possible in some cases that the detailed geology at a site may differ from that described.
