

On 3 sides of the school, we have green metal palisade fencing of 2.3m in height. (Shown in green on the plan below).

The old wooden fencing is falling down and needs replacing. The height of the old fencing is 2m (shown in red on the plan).

We wish to replace this strip of fencing to match the other existing fencing (currently on the other 3 sides) it would need to be 2.3m (increasing it by 0.3m).

The old fence is no longer fit for purpose and the school site is not secured on the southern side leaving the building susceptible to intruders.

By replacing the existing old wooden fencing with new 2.3m high green palisade fencing this would ensure that the fencing around the whole perimeter was consistent at 2.3m and secure the school site and the BMBC capital asset.
