

SIGNAGE

SignFlex

A robust single sided flexible faced sign box system with a 200mm depth suitable for flexface signage of all shapes and sizes.

The system is front tensioning giving ease of access thus enabling the installer to use cordless power tools simply fitted with a 10mm size socket giving a rapid tensioning facility.

Full perimeter tensioning ensures wrinkle free skins every time and removable access panels on all sides of the box can allow for simple maintenance to tubes and gear trays.

The perimeter cover on SignFlex has a unique integral gutter designed to minimise unsightly water marks travelling down the decorated skin.
