

TOAD HALL FARM, THURGOLAND, SHEFFIELD, S35 7BB.

HOLDING NUMBER 47 735 0005

We are a medium family farm currently milking 200 dairy cows with 300 young stock covering 180 hectares.

To be able to store enough clamped silage for the winter feed we need to erect two new silage clamps to reduce on the round baled silage we currently make to minimise on the plastic wrap we use and also reduce our carbon footprint.

To future proof our business for the younger generation who are farming with us we need to erect a corn store to store home grown produce, trying to grow as much feed as possible ourselves therefore reducing the carbon footprint, to be as self sufficient as possible.

This is to improve efficiency and modernise our dairy unit to ensure the longevity of Toad Hall Farm for the next generation.

The proposed silage clamps and corn store will contribute to reducing waste feed as well as improving the silage fed to the dairy herd and youngstock, and also protecting the cereals from the adverse weather.
