

Tree works at The Parsonage (Daley)

I am seeking permission to fell eight trees, due to a proposed development to extend the property 3 metres into the rear garden (see attached sketch of tree locations). These eight trees are within a few metres of the rear of the property, they provide no public visual amenity, take light from the rear of the property and are either close to, or within the area we are seeking to develop.

The trees are all beech and form part of a woodland area comprising over 100 trees in approximately one acre of land belonging to The Parsonage (see attached aerial picture). They were planted, or have self-seeded, extremely close to the house. The woodland itself is not overlooked or visible to a member of the public passing by, therefore the removal of these trees will cause no loss of visual amenity to the public and will greatly increase the light reaching the back of the property.

Removing these eight trees will not impact on the wood itself but will make a significant difference to the light at the rear of the property. In our on-going woodland management plan we intend to plant new trees where appropriate, however the woodland is currently overcrowded due to self-seeding.
