Design and Access

The planning application has been checked over by Keith Pell.

Access to the treatment room is via one step from the road.

The room adjoins another residential property so the adjoining wall has been soundproofed. The treatments involve no use of loud machinery so there is minimal noise and the adjoining neighbours will not be affected.

The door leading to the rest of the property is a fire door and lockable – during opening hours this door will be locked. Fire escape will be via the front door that leads directly to the road.

The room contains a toilet and washbasin for use of clients. The toilet is a saniflo and is already linked to the main soil stack (building regulations approved).

Clients are only to be accepted by appointment so there will be no "passing trade". Each client will be allocated 45minutes - 1 hour so even if all available slots were booked this would only involve 7-9 people visiting the premises each day.

The room leads on to Dodworth High Street where there is available parking so no parking is being provided.
