RE: Export connection, Barnsley STOR project

Dear Alex,

HV Installation – Barnsley, Whaley Road Sub-Station

With regard to your proposed installation of a STOR facility at Whaley Road Substation, Barnsley, we have been negotiating a point of connection with the local distribution company who have confirmed that the only local point of connection for this type of development is their primary supply point at Whaley Road, Barnsley. This facility feeds the supply for several kilometres in each direction. The only other suitable substations are at their limits in terms of export capability.

This type of back up generation project requires a point of connection at or very close to a primary substation. We have explored other points of connection with the local network provider but the other substations in the district have technical issues that make further export connection unviable.

I trust the above is clear, and if you require any further information please do not hesitate in contacting me on the number below.

Regards

Steve Holmes *B Eng MIET*
