Dear Sirs

We are retained by the owners of Middle Cliff Farm, Mill House Green in respect of undertaking ecology surveys in relation to the installation of a single wind turbine on their farm.

The proposal is to install the turbine on the edge of the open cast workings indicated in the centre of the plan attached.

We have been asked by the council ecologist to consult with you as to any significant bird interest in the local area and potential impacts thereupon.

Our initial screening indicates the site may be suitable for upland breeding birds such as curlew as well as more open habitat species such as Lapwing.

We would appreciate hearing any comments or concerns you may have in respect of the local bird interest.

Yours Sincerely

Mr Andrew Gardner BSc (Hons), MSc, MIEEM, MRICS, CEnv, Dip NDEA
