Dear Sirs,

Further to the concerns voiced by neighbouring parties regarding the possibility of unpleasant smells and flies connected with the proposed slurry store at Stone Farm, I write to assure the council that I am currently investigating methods to prevent this potential problem.

One such course of action would be to install an aeromixer which reduces odour and methane emissions during storage and is energy-efficient to run. I am awaiting more information on this option and actively looking for alternative solutions as well.

Yours faithfully

J Hall
