

FAO Mr Graham northern-planning services
re agricultural building at overill gate lane
revisions, -

a) external appearance / facing materials
have been changed in accordance
with your request (ie fairfaced block
work & bearding in lieu of natural
stone & standard roof sheets in lieu of
traditional tiles).

b) the building has been turned thro' 90° to
present a reduced bulk as seen from
nos 61+63 overill gate lane.

c) the sighting of the building has been
chosen to provide economic services
to the "top field" & the livestock. Also
the area being at the highest level has
a dry subsoil base, whereas areas
closer to the pond encounter natural
water courses.
