# Executive Summary

Mott MacDonald Ltd was appointed by Barnsley Metropolitan Council to undertake a Preliminary Ecological Appraisal (PEA) of a redevelopment site in the centre of Barnsley. The proposed development, is to comprise the demolition and redevelopment of a number of buildings within the city centre including multi-storey car parks, the TEC Centre, the old Council offices and the Market Hall.

A desk study and an Extended Phase 1 Habitat Survey were undertaken. There is one non-statutory designated site within 2km of the development, Dearne Valley Park, which consists of oak woodland and wetland habitat.

The majority of habitats within the site extents include buildings and hard standing with a small patch of amenity grassland and a few scattered ornamental trees. Protected species that may use the site include breeding birds, most likely feral pigeons *Columba livia*, within the buildings.

Before demolition of the buildings a breeding bird survey should be carried out to ensure no nesting birds are present. Should any nesting birds be present the demolition will have to be postponed until any chicks have fledged. Breeding bird season is typically March to August so if the demolition occurs outside of this period no mitigation will be required.

Following discussions with the Barnsley Council Ecologist bat activity surveys are recommended in the vicinity of the buildings to be demolished to understand how the area is used by bats for foraging and/or commuting.

Possible opportunities for ecological enhancements could include buildings with bat bricks incorporated into their design or additional planting of trees and/or wildflower mix around the redevelopment.

# 1 Introduction

## 1.1 Background

Mott MacDonald Ltd was appointed by Barnsley Metropolitan Council to undertake a Preliminary Ecological Appraisal (PEA) of the site, which is located in Barnsley, at National Grid Reference SE 3465 0633 (see Figure 1.1). The PEA encompasses both Phase 1 and Phase 2 of the Better Barnsley Scheme, which comprises of the demolition of several buildings within the city centre, including multi-storey car parks, the TEC Centre, the old Council offices and the Market Hall, followed by the development of new buildings. Phase 1 of the scheme includes construction of a new market hall, library, shopping units and a new public square. Phase 2 includes a new cinema, offices, and a multi-storey car park.

## 1.2 Aims and Objectives

The aim of this report is to provide a PEA of the site, highlighting any protected and/or notable habitats and species which occur or have the potential to occur on or near the site and which may be impacted by the proposed works. The report follows the 'Guidelines for Preliminary Ecological Appraisal' (CIEEM, 2013).

The objectives are to:

- Identify any designated sites for natural conservation and habitats on, near and adjacent to the site;
- Identify any notable and/or protected plant or animal species of conservation value, which may occur on or near the site;
- Identify the presence of any invasive plant species on or adjacent to the site;
- Provide a habitat map with target notes of ecological features as identified above;
- Undertake a preliminary assessment of the potential impacts on any ecological receptors of conservation value identified on, near or adjacent to the site; and,
- Recommend further surveys, mitigation and enhancement measures as appropriate.

## 1.3 Zone of Influence

The current guidance on ecological assessments (IEEM, 2006) recommends that all ecological features that occur within a 'zone of influence' (Zol) for a proposed development are investigated. The Zol includes:

- Areas directly within the land take for the proposed development and access;
- Areas which will be temporarily affected during construction;
- Areas likely to be impacted by hydrological disruption; and
- Areas where there is a risk of pollution and noise disturbance during construction and/or operation.

The Zol is variable depending on the ecological receptors affected.

## 1.4 Assessment of Ecological Value

An assessment of the ecological value for habitats and species within the Zol was made, where possible, in accordance with current guidance (IEEM, 2006). These are as follows: international, national, regional, county, district, local and Zol only.

## **1.5 Legislative and Policy Framework**

The construction and operational activities for the proposed works must comply with the International, European and UK nature conservation legislation, and with national and local biodiversity policies. The main pieces of legislation in the UK are the Wildlife and Countryside Act 1981 (as amended) and the Conservation of Habitats and Species Regulations 2010 (as amended). The biodiversity policies which are most relevant are the National Planning Policy Framework (NPPF, 2012), Biodiversity 2020, and the Barnsley Biodiversity Action Plan (BAP).

Under the Natural Environment and Rural Communities (NERC) Act 2006, all public bodies are required to have regard to biodiversity conservation when carrying out their function. Under this act a list of habitats and species that are of principal importance for the conservation of biodiversity in England are published under Section 41.

## 2 Methods

### 2.1 Desk Study

A desk study was undertaken of the designated sites for nature conservation, habitats of conservation importance and protected and notable species which occur within 1.5km of the proposed development. Data has been received from Sheffield City Ecology Unit of protected species and non-statutory designated sites within 1.5km of the development. In addition data was collected from online databases including the Multi-Agency Geographic Information for the Countryside (MAGIC), Joint Nature Conservation Committee (JNCC) and the Barnsley BAP.

### 2.2 Extended Phase 1 Habitat Survey

A field survey, in the form of an extended Phase 1 Habitat Survey was undertaken by an Ecologist on 20 January 2015. All habitats within the site were identified and mapped in compliance with the 'Handbook for Phase 1 habitat survey: a technique for environmental audit' (Joint Nature Conservation Committee, 2010). Dominant plant species were noted, as were any protected or invasive species listed on Schedule 9 of the Wildlife and Countryside Act 1981 (as amended).

An assessment was also undertaken of the likely presence or absence of protected and notable animal species within the Zol of the proposed development. This was based on the known distribution of species, habitat suitability and/or direct evidence such as field signs or observations. The methodologies and assessment criteria used were based on current published guidance where available. Specific assessment criteria for bats used in this report are given in Appendix A.

# 3 Results

## 3.1 Desk Study

### 3.1.1 Designated Sites for Nature Conservation

#### 3.1.1.1 Statutory designated sites for nature conservation

There is one statutory designated site within 2km of the development. This is Dearne Valley Park Local Nature Reserve (LNR) which is approximately 1.2km North East of the development (Figure 3.1).

Figure 3.1 Location of Dearne Valley LNR

Source Magic.gov.uk, OS mapping licence: 100026791

#### 3.1.1.2 Non-statutory designated sites for nature conservation

There are two non-statutory designated sites within 1.5km of the development which consists of oak woodland and wetland habitat (see Table 3.1 and Appendix D).

Table 3.1: Summary of non-statutory sites for nature conservation

Site name	Designation	Minimum distance from site
Cliffe Wood	Local Wildlife Site	1.2km North East

Site name	Designation	Minimum distance from site
Old Mill Lane	Local Wildlife Sites	1.5km North East

### 3.2 Extended Phase 1 Habitat Survey

The locations of all habitats are shown on the Phase 1 habitat map in Appendix B, with associated Target Notes and photographs in Appendices C and D respectively. Target Notes are referred to as TN1, TN2 etc. in the following section.

#### 3.2.1 Scattered Trees

There are a few scattered trees around the development which are small and immature. These would have been planted as part of the previous development as ornamental trees.

#### 3.2.2 Building and Hardstanding

The majority of the development is comprised of buildings and hardstanding.

#### 3.2.3 Amenity Grassland

There is a small area of amenity grassland between the markets and the railway line which is not to be affected.

### 3.3 Protected and Notable Plant Species

#### 3.3.1 Breeding Birds

There are records of a number of birds within 1.5km of the development (Appendix D). Located nearest to the development are magpie *Pica pica* and feral pigeon *Columba palumbus*. Local Biodiversity Action Plan species are within the vicinity of the development including starling *Sturnus vulgaris*.

There is potential for breeding birds, most likely feral pigeons *Columba livia*, to be within the buildings and car parks to be demolished. There is a large amount of bird faeces underneath some of the trees (most likely from starlings). Due to the disturbance level within the trees with constant human presence and the immaturity it is unlikely that breeding birds will be nesting within the scattered trees.

All wild birds, their nests and eggs are protected under the Wildlife and Countryside Act 1981 (as amended). It is an offence to take, damage or destroy the nest of any wild bird while it is in use or being built. In addition species listed on Schedule 1 of the same act are afforded additional protection from disturbance whilst breeding.

### **3.3.2 Bats**

There are many records of bats within 1.5km of the development. A common pipistrelle *Pipistrellus pipistrellus* is noted within 1km<sup>2</sup> of the development but the exact grid reference is inaccurate and the record is from 1992.

None of the buildings had any potential for roosting bats due to intact brick work, lack of roof and loft space and the use of lighting.

There is little foraging habitat in the vicinity of the proposed works due to lighting and lack of suitable habitats being present. Following discussions with the Barnsley Council Ecologist if bats are using the area then the demolition could cause impacts or disturbance on bats foraging and/or commuting in the vicinity.

Bats are protected by Schedule 5 of the WCA 1981 (as amended) and The Conservation of Habitats and Species Regulations 2010 (as amended). This legislation makes it an offence to kill or injure a bat, disturb it while it is roosting or destroy a roosting site.

### **3.3.3 Amphibians and reptiles**

No records of reptiles were found within 1.5km of the development and no habitats such as scrub or grassland were found within / adjacent to the proposed works footprint. Common Toad *Bufo bufo* records were found in 2003 and 2007 within 1.5km but there are no waterbodies on or adjacent to the site so there is no potential for their presence.

### **3.3.4 White clawed crayfish**

There are records for both white clawed crayfish *Austropotamobius pallipes* and signal crayfish *Pacifastacus leniusculus* within 1.5km of the development. As the only watercourse within the Zol to the works is a culverted drain therefore there is no potential habitat for white clawed crayfish to be present.

## 4 Interpretation and Recommendations

### 4.1 Further surveys

Bat activity surveys will be undertaken following the 'Bat Conservation Trust Bat Surveys Good Practice Guidelines' (Hundt, 2012). These will consist of one transect on two visits between March to September, the optimum period being June to August. For a valid survey the night time temperature should be above 10° centigrade. Bats will forage at temperatures below this but insect levels drop and so levels of activity also drop.

### 4.2 Mitigation

The following mitigation measures must be implemented in order to comply with planning and legislative requirements.

Before demolition of the buildings a breeding bird check should be carried out to ensure no nesting birds are present. Should any nesting birds be present the demolition will have to be postponed until any chicks have fledged unless there is an overriding health and safety issue. Breeding bird season is typically March to August so if the demolition occurs outside of this period no mitigation will be required.

The building could possibly be sealed and pigeon deterrents installed but this would likely be costly and should be only be considered if a delay to the demolition, if planned between March and August, would not be feasible due to nesting birds.

### 4.3 Possible Enhancements

The following optional enhancement measures are recommended. The implementation of these measures will contribute to providing net gains to biodiversity as required under the NPPF 2012 and Section 40 of the NERC Act (2006).

Buildings with bat bricks incorporated into their design or additional planting of trees and/or wildflower mix around the redevelopment.

# Appendix A. Summary of Assessment Methods

## A.1 Bats

All buildings within the site with the potential to support roosting and foraging bats were assessed using the 'Bat Surveys Good Practice Guidelines' (Hundt, 2012). Buildings and other structures were assessed using the criteria outlined in Table A.1.

Table A.1 Criteria for bat roost potential assessment of a structure.

Bat Roost Potential	Description
Negligible/No potential	The structure lacks any features suitable for roosting bats.
Low	The structure may have some interest to roosting bats, e.g. external roosting features such as fascia or soffit boards, but is considered to be sub-optimal to the extent that bats would not be anticipated to use it.
Moderate	The structure exhibits features suitable for use by roosting bats, such as internal and external cavities well insulated from external weather conditions, but is less than ideal in some way. It may be situated in less than ideal habitat, lacking suitable commuting corridors.
High	The structure exhibits a number of features suitable for use by roosting bats e.g. numerous roosting opportunities such as dark, enclosed roof voids; the structure has a high degree of connectivity with likely navigation routes; and the building is located within suitable foraging habitat, likely to be noticed by commuting bats.
Confirmed	Positive signs of bats are recorded within the structure (internally or externally), such as individual bats or bat droppings.

<b>Site Name:</b>	Cliff Wood
<b>Site Area:</b>	32.27ha
<b>Survey Date:</b>	August 2010
<b>Nearest Settlement:</b>	Cundy Cross, Monk Bretton
<b>Grid Reference at Centre:</b>	SE36220, 06805
<b>Surveyor(s)</b>	VG, LAC

### **Site Description:**

Cliff Wood is located within Dearne Valley Park. It lies to the north of the River Dearne between Old Mill Lane, in the west, and Cundy Cross, to the east. The River Dearne flows in a generally easterly direction forming the southern boundary of Cliff Wood in places (TN8, TN11). Dearne Valley Park was established in 1980 and was designated as a Local Nature Reserve in 1996. This designation includes Cliff Wood, as it lies within the park. The site lies on a south-facing valley slope, ranging between approximately 35 and 75 metres above sea level.

Cliff Wood is underlain by coal measures sandstones, sedimentary rocks dating from the Carboniferous period, with outcrops in various spots throughout the site. The majority of the broadleaved woodland is dominated by oak and birch, with smaller amounts of other native species such as ash (*Fraxinus excelsior*), hawthorn (*Crataegus monogyna*), holly (*Ilex aquifolium*), hazel (*Corylus avellana*) and field maple (*Acer campestre*). Many of the specimens are stunted and multi-stemmed, both as a result of the thin acidic soils but also partly due to local collection of wood for fuel during various miners' strikes. The habitats are a mixture of semi-natural oak/birch woodland (TN2), diverse mixed plantations of native species (TN4, TN6) developed in the 1980's and an area of wet willow-dominated woodland.

There are also areas of open neutral grassland (TN1, TN3) and scrub, bodies of standing water with associated swamp habitat (TN5) and areas of parkland along the base of River Dearne valley.

The whole broad area is well-served by footpaths and provides a wild open space in close proximity to a large urban population.

### **Important Species:**

Sessile oak (*Quercus petraea*), wood speedwell (*Veronica montana*), bluebell (*Hyacinthoides non-scripta*), broadleaved helleborine (*Epipactis helleborine*), yellow archangel (*Lamiastrum galeobdolon*), small-leaved lime (*Tilia cordata*) and wood horsetail (*Equisetum sylvaticum*) are all present on the site. These species are considered as ancient woodland indicator species within South Yorkshire.

The Schedule 9 invasive alien species Japanese knotweed (*Fallopia japonica*) is present on the site, in addition to giant hogweed (*Heracleum mantegazzianum*) and Himalayan balsam (*Impatiens glandulifera*).

The site contains UKBAP breeding birds such as: willow tit (*Poecile montanus*), dunnock (*Prunella modularis*), bullfinch (*Pyrrhula pyrrhula*) and song thrush (*Turdus philomelos*).

### **Management Issues:**

Under the past 'Fuelling a Revolution' programme, a plan for woodland restoration and access improvement was completed which restored woodland habitats and maximised educational and recreational potential. Areas of closed tree canopy are being opened up by selective felling, allowing light to reach the woodland floor to encourage growth of woodland wildflowers and young trees, particularly of native species typical of ancient semi-natural broad-leaved woodlands.

Barnsley Council is also maintaining and improving the footpath network and wheelchair access, as part of a plan to raise awareness of the history and natural history, recreational potential, interpretation and management of the site.

Invasive species are present in the site including Japanese knotweed, giant hogweed and Himalayan balsam.

### **Diversity:**

The old established woodlands on this acidic slope hold a wide range of locally native species. Newer plantations have added a wider range of native trees and shrubs to the site. Both species and structural diversity are enhanced by the mix of open grassy areas, developing scrub, stands of tall ruderal herbs, swampy areas and both still and running water habitats.

Parts of the woodlands appear to have considerable age as well as a complex history of past use, all adding to the levels of diversity within the site.

### **Naturalness:**

The sloping woodlands are generally quite natural in character. Most of the plantation areas are in the flatter valley bottom. Human intervention is much more evident here, with waterbodies created and the river course managed as well as areas maintained as grassland.

The river banks in particular support a range of non-native species, including the invasive alien Japanese knotweed (*Fallopia japonica*), giant hogweed (*Heracleum mantegazzianum*) and Himalayan balsam (*Impatiens glandulifera*).

### **Rare or Exceptional Features:**

The range of semi-natural broadleaved woodlands and the species that they support form a major asset of this site. The topography and location of this site also makes it ideal for gaining an overview of the Dearne Valley and the nearby centre of Barnsley beyond. The rock outcrops allow a view of the underlying geology.

### **Fragility:**

Woodland has survived on this site for many centuries and is a robust habitat in this location. Management plans should help prevent typical species being lost through the canopy becoming too dense and shading.

In the event of economic down turn, it is quite possible that the woodland may once again be called on to provide domestic fuel for local people, although the proportion of houses with open fires is now much reduced.

The proximity of large residential areas also enhances the possibility of fly-tipping and other damage, but good management locally appears to control much of this.

The river course is always open to potential contamination from activities along its banks

### **Typicalness:**

The semi-natural woodlands on the site's slopes appear to be typical of local acidic conditions, mainly being a mix of W16 oak species-birch species-wavy hairgrass (*Deschampsia flexuosa*) community and W10 oak (*Quercus robur*) – bracken (*Pteridium aquilinum*) - bramble (*Rubus fruticosus*) community.

The range of habitats here, both semi-natural and man-made, are typical for developed parts of the Dearne valley.

### **Recorded History & Cultural Associations:**

The history of Cliff Wood can be linked back to the Cluniac and Benedictine monks who inhabited Monk Bretton priory, just over 1km downstream from this site, from the 12th century up to the dissolution.

Timber from the wood has long been used in local coal mining and iron ore production. Numerous collieries developed along this stretch of the River Dearne and they were associated with large numbers of railway lines running from all points of the compass, curving and crossing one another to reach each colliery. One of the largest collieries locally was the Barnsley Oaks Colliery, whose disused site can be seen just south of the River Dearne.

The collieries have left their impact on the landscape in the form of linear earthworks that have often become the route for new footpaths throughout the area. In the case of this site, this is also true for the course of the Dearne and Barnsley Canal; the route of the in-filled canal forms a grassy glade now used as a footpath curving through the site's woodlands.

### **Connectivity within the Landscape:**

Dense residential development dominates the whole of the long northern boundary of the site, with the southern edge being bounded by the course of the River Dearne. There are close links to the urban and suburban habitats to the north of the site and the Dearne Valley provides links to wider areas east and west of the site, with the valley comprising a major wildlife corridor.

There are also many links within the site, up and down the slopes and along the valley bottom, interlinking the range of habitat types present here. South of the river, there are wide swathes of post-industrial land forming developing areas of open space.

### **Value for appreciation of Nature and Learning:**

This site is very close to centres of population and is very accessible with various options for parking and good internal access. One major path (accessible to people in wheelchairs) leads north from the Pontefract Road car park across the River Dearne and past the lakes of Dearne Valley Park to the southern edge of Cliff Wood. For access to the northern part of the site, there is parking in various side streets off Rotherham Road.

A network of paths gives good access to the great majority of the site. Access in the southern, flatter half of the site is generally straightforward but some paths towards the northern edge of the site can be steep in places. The flat, wide, grassy route of the old canal route provides easy access from west to east through the centre of the site.

Educational use of the site is facilitated by a range of available information packs covering a wide range of subject areas and Key Stages. The Dearne Way follows the river course from east to west, linking into a local network of public footpaths, giving good pedestrian access into and throughout the site.

### **Recommendations:**

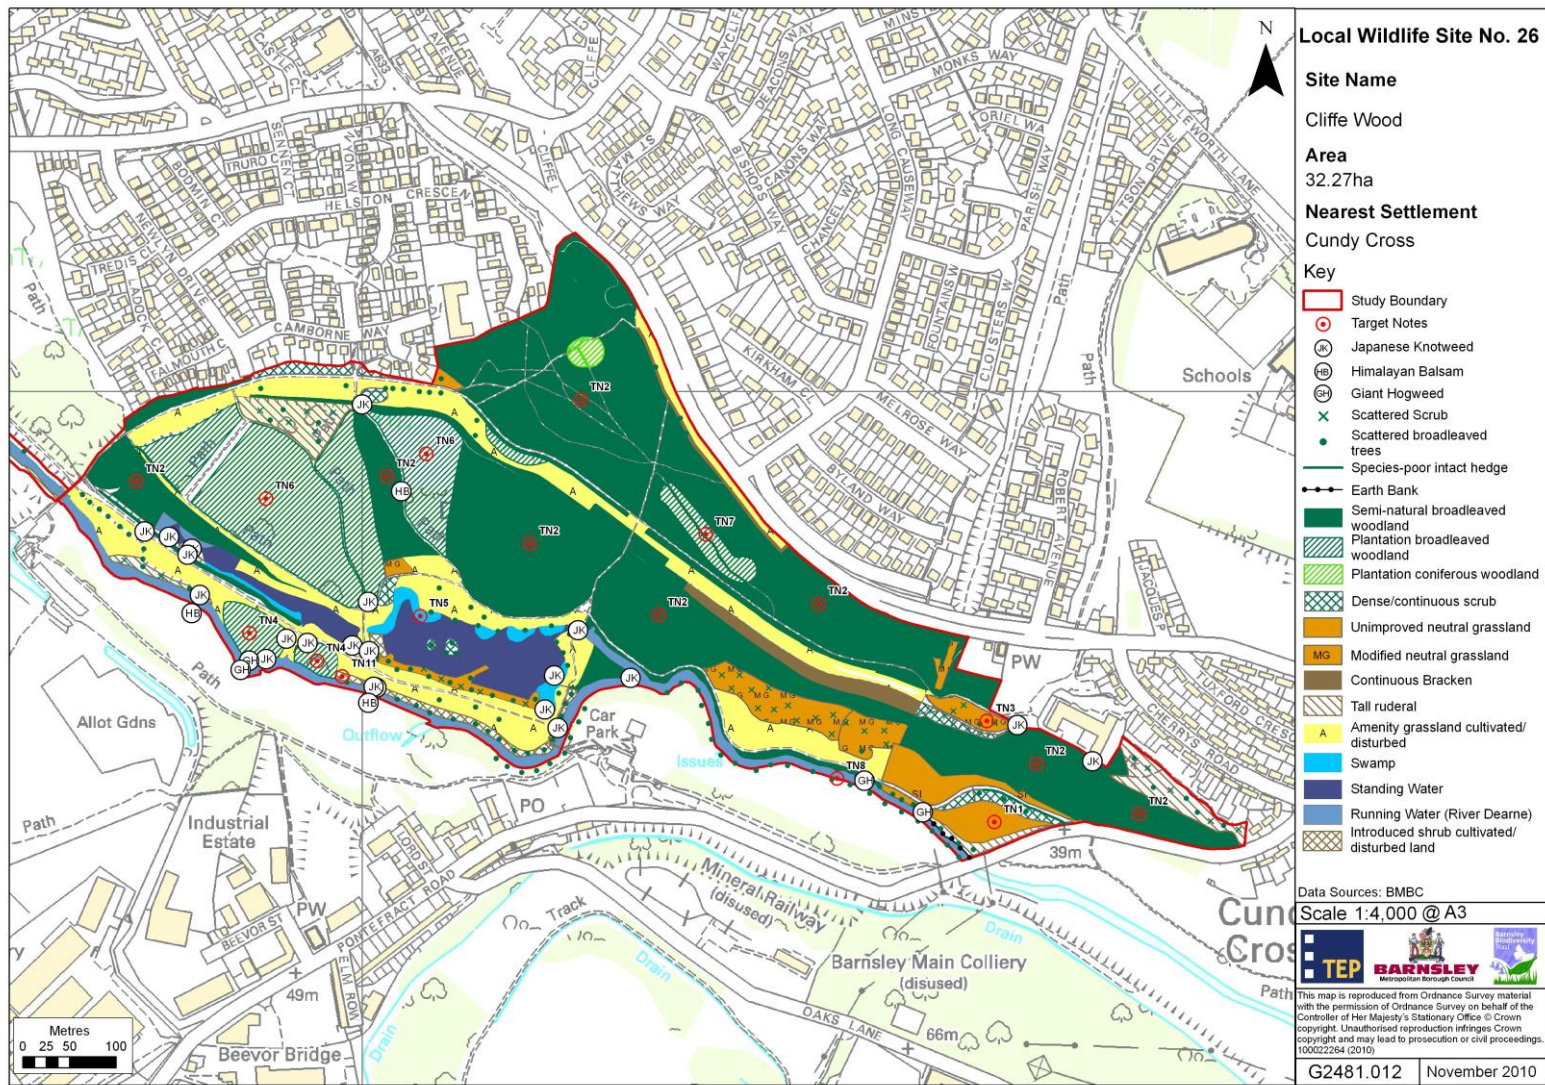

This site contains a number of ancient woodland indicator species and has been subject to improved management and a programme of interpretation.

Its size and wealth of flora and historical interest indicate that this site is an important part of the Borough's biodiversity resource and should be considered as such.

#### **Action:**

Retain as a Local Wildlife Site

Seek to control the invasive/alien species that are on the site

# 54. Old Mill Lane Culvert Bat Roost

## LWS Assessment and Phase 1 Survey

<b>Site Name:</b>	Old Mill Lane Culvert Bat Roost
<b>Site Area:</b>	10.27ha
<b>Survey Date:</b>	September 2010
<b>Nearest Settlement:</b>	Honeywell, Smithies
<b>Grid Reference at Centre:</b>	SE34979, 07486
<b>Surveyor(s)</b>	LAC, VG, RH (2010) Eric Bennett, Bat Consultancy (Mar 2004) Pete Middleton, Environmental Consultancy (2011)

### **Site Description:**

This site is located on the River Dearne, where it flows in a south-easterly direction just to the north-east of Barnsley Town Centre. The valley is crossed by the A61, heading from the town centre. The river contains a series of culverts associated with the road, the river and former mill races. The main culvert is approximately 2m wide by 1.5m and is estimated to be 90m long. It runs parallel to Old Mill Road to the former mill site and contains five side tunnels along its length which pass beneath Old Mill Road. Since 1990 this culvert has been known to support an important maternity roost for Daubenton's bat (*Myotis daubentonii*). The colony emerges from the grilled culvert entrance to feed along the river course and over the large waterbody at The Fleets (TN4), lying within the site boundary to the north-west of the A61.

The course of the Dearne is tree-lined, both upstream and downstream of the A61 bridge, with broader woodlands and plantations outside the site boundaries downstream. Downstream, the site is confined to a narrow strip along the river course where the banks have a lot of sycamore (*Acer pseudoplatanus*) and ash (*Fraxinus excelsior*) in the stretch as far east as the gasworks. Beyond that, to the south-east, the banks are lower with silver birch (*Betula pendula*) and goat willow (*Salix caprea*) dominated scrub/woodland with taller alders (*Alnus glutinosa*) along the river edge.

Upstream of the A61 the landscape of the floodplain opens out into recreation grounds and bodies of standing water. There is still a fringe of mixed deciduous tree growth along the heavily modified river banks to the north-west of the A61 bridge. Giant hogweed (*Heracleum mantegazzianum*) was noted both upstream and downstream of Old Mill Lane.

South of The Fleets there is a large area of plantation within the site (TN7), north-east of the superstore. There is also broadleaved woodland present on the opposite bank of the Dearne (TN8). Former lagoons (TN6) that survive as tree-lined bodies of standing water are also present south of The Fleets. The Fleets is a large open waterbody with generally sparsely vegetated banks and little marginal vegetation present. The margins which are vegetated contain mainly reed sweet-grass (*Glyceria maxima*) and great willowherb (*Epilobium hirsutum*). As well as being used as a foraging resource for local bats, these waters are also fished by local anglers. There is a neutral grassland dominated bank with scattered trees and scrub (TN3, TN5) located between the large waterbody and the river. To the north scattered growth continues along the river course and there is some goat willow scrub (TN1, TN2). North-west of Smithies Lane the valley opens out into a much more rural landscape, beyond the site boundaries.

### Important Species:

Daubenton's bat is a European protected species (receiving full protection in the UK under the Conservation of Habitats and Species Regulations 2010) and also receives some protection under the wildlife and Countryside Act 1981 as amended. All bats are considered as Local Biodiversity Action Plan Priority species. The Daubenton's colony which occupies the culvert near the bridge of the A61 is a maternity colony. Counts in September 2010, near the end of the maternity season, confirmed 67 bats exiting via the grilled culvert entrance. Significant proportions of the colony turned immediately to pass under the bridge, foraging along the river corridor to The Fleets. Smaller numbers also headed downstream. Common pipistrelle (*Pipistrellus pipistrellus*) were also abundant and foraging upstream and downstream of the culvert.

Giant hogweed is a Schedule 9 listed invasive species and poses a risk to public health and safety. Japanese knotweed and Himalayan balsam, also Schedule 9 species, occur throughout the site along the river banks and under the tree cover

The corridor supports breeding kingfisher (*Alcedo atthis*) a schedule 1 species, UKBAP breeding willow tit (*Poecile montanus*), bullfinch (*Pyrrhula pyrrhula*) and song thrush (*Turdus philomelos*).

Additionally, otter (*Lutra lutra*) has been recorded in 2011 on the River Dearne.

### **Management Issues:**

Perhaps the greatest priority is to ensure that any management of the road surface, riverbanks and traffic flows does not deleteriously affect the important bat roost areas below the ground surface. It is essential to the integrity of the bat roost that suitable flyways are maintained and protected to preserve foraging and dispersal routes for the bats from the roost to the main feeding areas along the River Dearne and over The Fleets and other local waterbodies.

Invasive species occur throughout the site. Of primary concern is the presence of giant hogweed, where it occurs in locations that could be accessed by members of the public, as this species presents a risk to public health and safety.

### **Diversity:**

This site does not hold any significant botanical diversity and the aquatic habitats are generally man-made or heavily modified. However the bat roost is of national ecological value and is the primary reason for the recommended designation of this site.

### **Naturalness:**

The banks of the River Dearne are highly modified throughout the length of this narrow linear site. Beyond the edges of the river course there are a series of embankments and artificially created waterbodies. However, the bat roost occupies totally artificial habitat, showing how some species adapt well to unnatural structures within their habitats. Most of the plant species present here are locally native and no doubt help to support a range of native invertebrates, birds and mammals.

### **Rare or Exceptional Features:**

An important feature is the old culvert complex and access points supporting the Daubenton's bat roost. This maternity colony is considered to be the most important for this species in the Borough and is thought to be of national importance due to its size. Previous counts have regularly recorded over 250 breeding females. The peak count was recorded in 1990 identified 412 bats and included juveniles.

Counts in 2010 may appear to be considerably lower than these earlier records, but it must be appreciated that the 2010 count was made late in the maternity season, when the colony is likely to be dispersing. The 2010 count, though likely to under record the colony size, is still above the average colony size for this species, normally counted at around 20-50 individuals.

The course of the River Dearne throughout the length of the site is also a feature of value.

### **Fragility:**

The maternity roost is highly vulnerable to disturbance at inappropriate times of year during the course of any road management activity, redevelopment at the former mill or any changes to the river corridor. Even minor works to the road or other surfaces over the culvert could lead to significant disturbance. Any modification to the road surface above the roost chamber, which is situated very close below the surface, could potentially kill or injure a large number of bats in a very short space of time.

Development activities, including road improvements, can however be appropriately mitigated under licence. Of significant concern though is the loss of riverside trees and scrub on the other side of Old Mill Lane. Any fragmentation of the tree lined corridors that connect the maternity roost with the important feeding areas upstream could be disastrous, potentially resulting in roost failure. The stretch of river connecting the roost site to the closest primary foraging habitat at The Fleets contains a large weir. The majority of bats have been recorded leaving the channel of the river just on the other side of Old Mill Road to fly and forage in the tree/scrub area along river bank in order to bypass the weir. These riverside habitats are therefore crucial to the maintenance of the roost.

The maternity colony is vulnerable to disturbance at the roost entrance at inappropriate times. The entrance is grilled, but the grill was unlocked at the time of the 2010 roost count.

Another threat to the integrity of the roost is fluctuating water levels. Flooding of the culvert could result in complete loss of the colony.

The river itself is vulnerable to contamination incidents along its length upstream

that could spread downstream and affect this site with possibly damaging pollutants.

### **Typicalness:**

The modified water course is fairly typical for the Barnsley area, reflecting the need to protect the nearby town centre from flooding incidents.

The use of the culvert by Daubenton's bats is not unusual for this species, but the large colony size is very uncommon. Only two or three Daubenton's roosts approaching the size supported at this site have been recorded in Britain. The roost is of high ecological value.

The range of plant species present is generally typical for urban riparian habitats.

### **Recorded History & Cultural Associations:**

There is a long history of exploitation of the river and its banks along this stretch of the Dearne. The name Old Mill Lane relates to former milling activities here. The mill and mill race are shown on the 1779 Enclosure Map, but presumably date from long before that time.

The high slope of Burton Bank, just to the east, is the site for a Quaker burial ground established in the 1650s, indicating the length of time this section of the valley has been locally important.

The disused Barnsley Canal formerly ran parallel to the River Dearne, just to the south and west of the site. There is much social and industrial history locally that could be usefully researched to add value to the interpretation of this site.

### **Connectivity within the Landscape:**

The River Dearne forms an integral part of this site, with strong links along the valley to other sites of wildlife value, both upstream and downstream. Beyond the flat valley bottom here the surrounds are mainly urban/industrial and built-up, being so close to the centre of Barnsley.

The bankside trees and scrub along the river are vital for the future viability of the Daubenton's bat roost.

### **Value for appreciation of Nature and Learning:**

The Dearne Way runs along the valley, just to the west and south of the site, between the river and the course or the disused canal. There are also public footpaths along the northern bank of the river downstream of Old Mill Lane. The site is well connected by roads and pavements with Barnsley centre, just to the south-west.

The proximity of this site to Barnsley makes it very accessible for a number of local schools however bat roosts do not lend themselves to large scale visits/disturbance.

### **Recommendations:**

The historic records of the Daubenton's maternity colony could potential quality the site for notification as a Site of Special Scientific Interest (it having been, in the height of the maternity season, an exceptionally large roost with a long history of use at this site). Further monitoring over the maternity season (potentially over more than one season) is essential in order to verify the current size of the roost.

The size of the Daubenton's maternity colony is certainly sufficient to warrant designation of this site as a Local Wildlife Site under the species selection criteria. The site boundaries should include all bankside habitats leading up to Smithies Lane and down to the adjacent Cliff Wood LWS downstream.

The future of the maternity colony is dependant upon the avoidance of disturbing or damaging activities that could affect the integrity of the culvert and of the roost chamber. Protection protocols should be established and advertised to ensure that awareness of the roost and roost chamber is raised prior to and during any road works or development activities. The potential requirement for a licence should be identified for any such works.

A management plan should ideally be formulated to encapsulate monitoring and maintenance objectives, such as inspecting the condition of the roost entrance and completing any necessary remedial works and undertaking river corridor habitat improvements that will strengthen corridors (particularly where structural habitats are missing) and alleviate flood risk.

Adjacent sites should also be monitored to establish their importance for foraging and identify other roost sites. The culvert should also be monitored seasonally to establish accurate patterns of use, particularly whether any hibernation occurs in Daubenton's bats or any other bat species.

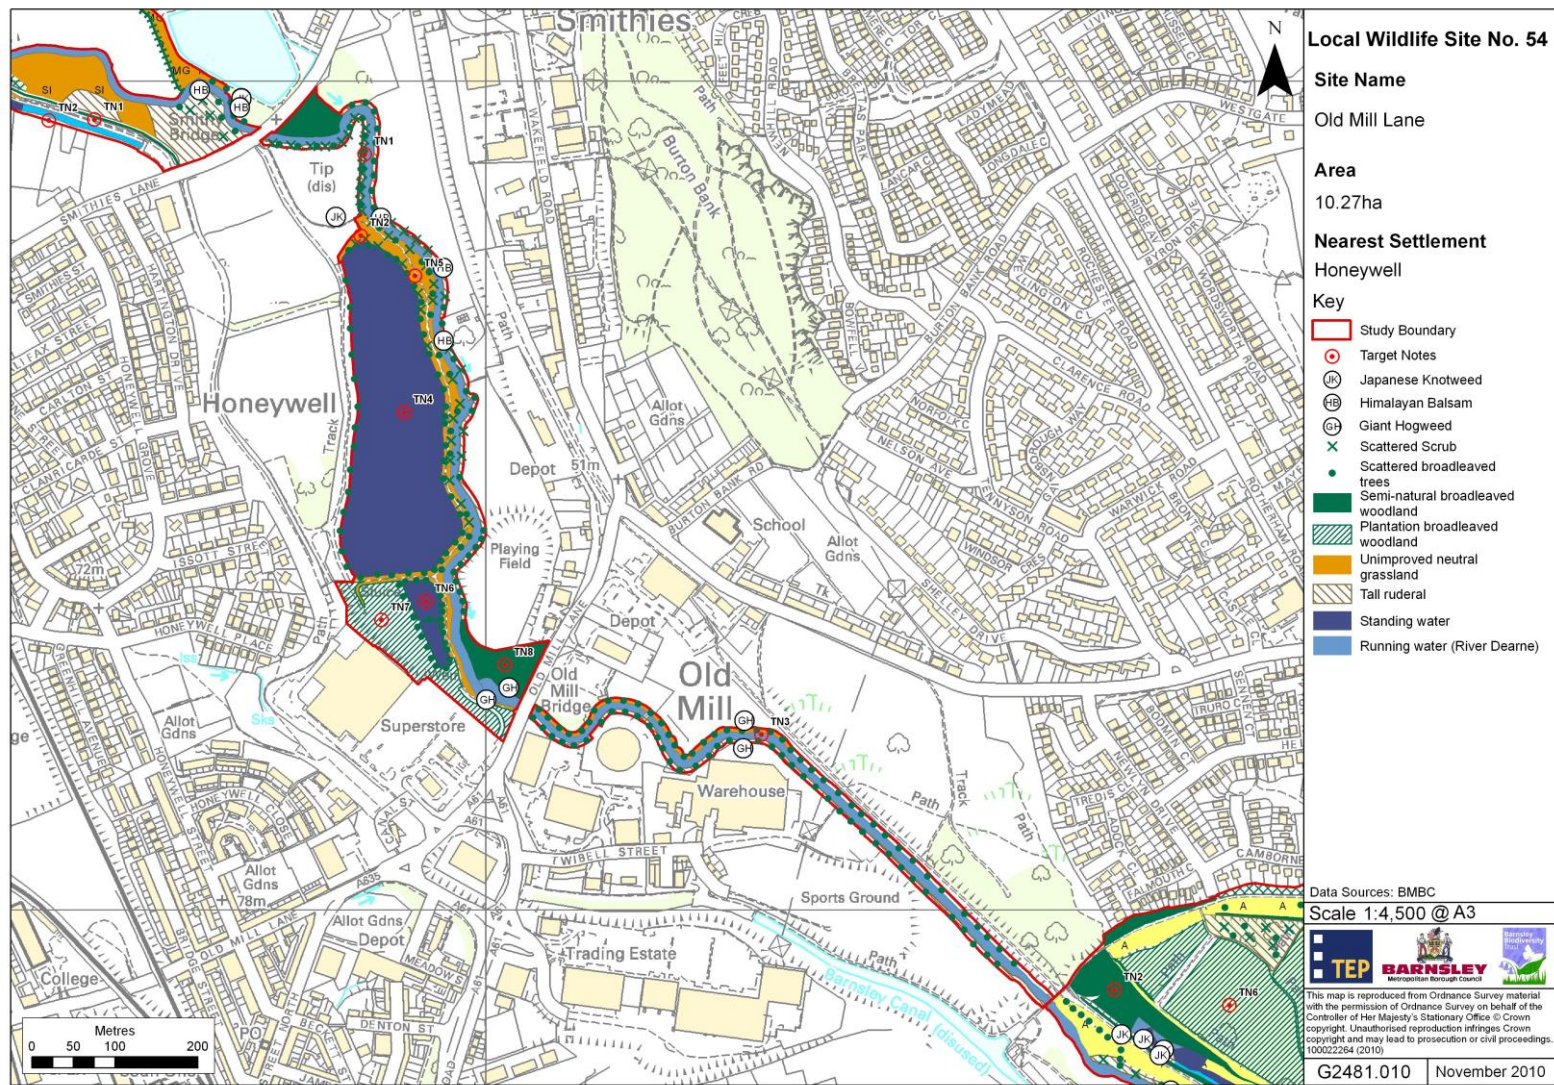

### **Action:**

Adopt as Local Wildlife Site

Monitor maternity colony through the maternity season to determine whether the site qualifies for notification as a SSSI

Establish whether the site is use for hibernation roosting by Daubenton's bats or any other species of bat

Establish protection and management protocols for the long-term security of the roost
