WOODLAND BUFFER - REPLACEMENT PLANTING 

Building waterproofed walls to be cut back as necessary, to permit repointing of mortar to accommodate settling, and to allow water to drain.

The whole buffer strip is to be relatively compact, dense, and well-drained, thus, supporting and stabilizing the road.

Healthy native buffer strips will have to be replaced.

A construction apron edge will be placed at line 1, and the backfill will be placed on the edge of the buffer strip. Compaction of the backfill will be as follows:

<i>Caryophyllus pediformis</i>	33%
<i>Caryophyllus albus</i>	200%
<i>Neos. angulatus</i>	100%
<i>Neos. caelestis</i>	25%
<i>Symphoricarpha z. chrysoides</i>	10%
<i>Viburnum opulus</i>	20%
<i>Vitis vulpina</i>	10%

Triangular areas immediately to front of parking bays to be planted with a color of Vinca major and Auguste carolinensis to give a linear edge.
