

Street Lighting
Arrangement

Denotes new 6M galvanised steel column with Arieda 40 lantern complete with electronic PEC.

All materials to comply fully with current BMBC Street Lighting Specification.

The street lighting columns and lanterns and their maintenance remain the responsibility of the developer until completion of the adoption process.

All lighting columns are to be provided with an unmetered single phase electricity supply via the REC cable network. It is expected that the developer will coordinate with the REC regarding the installation of any cable ducts they may require.

If an IDND is used columns need to be labelled using BMBC standard template.
