DEARNESIDE LEISURE CENTRE

DESIGN AND ACCESS STATEMENT

The existing entrance to Dearneside Leisure Centre is not currently DDA compliant and the lack of automated doors makes it increasingly difficult for people to access the reception area. The reception area also loses a large amount of heat when the doors are open as there is no existing lobby area.

The proposed lobby area will provide an easy access area compliant with DDA regulations and will make it possible to keep the reception area at a more comfortable and regulated temperature.

The design of the proposed lobby area will be similar in design to the existing façade of the property and will complement the existing structure.
