Design and Access Statement

The design of the conservatory is undertaken to be complimentary with the existing building and efforts have been taken to ensure that the materials are a match to the existing build.

The area which it projects out onto is the west facing elevation of the current building within the existing children's nursery play area all contained within the site boundaries.

The planned location is away from any public access

Access and egress through the conservatory will be through either the double opening doors to compliment and comply with the current fire exit route for the Nursery or through the opening front into the play area

Materials are of a leading industry standard with consideration given to minimise any reflective glare within the materials specified

The intended purpose of the conservatory is to continue to enhance the development of children within the nursery through their education from the internal and transition to the external learning environment allowing the full aspects of the Early Years Foundation Stage curriculum to be delivered throughout all seasons of the year.

Additional energy saving benefits will be in reducing the heat loss from the current nursery by having doors open for prolonged periods of the day to support the children currently within the setting.

Neil Spencer.
