

# Landscaping Statement

The proposed development comprises the installation of a below-ground waste treatment plant and drainage field within the existing garden curtilage.

The works will be undertaken below ground level and will not result in any permanent changes to the surface appearance of the site.

All disturbed areas will be reinstated with topsoil and reseeded to match the existing lawned garden.

Existing boundary hedgerows and vegetation will be retained and will not be affected by the proposed works.

No additional hard or soft landscaping is proposed.
