NT14203-001 Revised Restoration April 2019

1 RESTORATION PROPOSALS

1.1 Introduction

1.1.1 The revised restoration scheme incorporates necessary slope regrading works using existing soil resources on the site and aims to retain and further enhance broad landscape typologies such as woodland, meadow grassland and wetlands to create a mosaic of habitats. The revised restoration scheme is shown on Drawing NT14203-001 and key aspects of the restoration proposals are listed and illustrated below:

2 DETAILS OF RESTORATION PROPOSALS

Retain access through the quarry and link to public right of way to the west

2.1.1 The existing quarry access will be retained as shown on the revised and an informal link to the public right of way which follows the western application boundary is proposed.

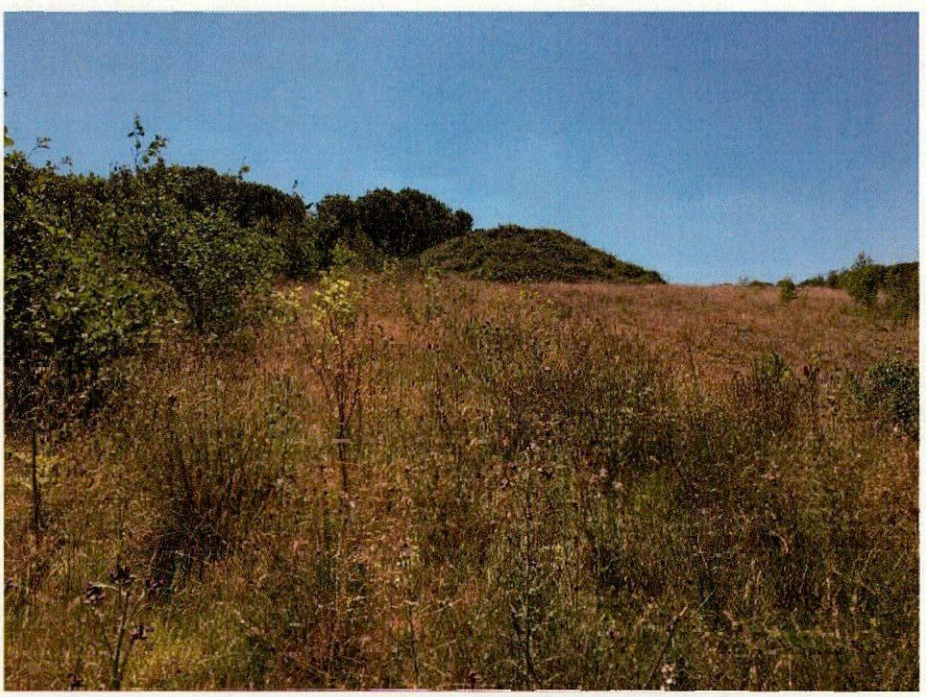

Retain restored meadow grassland

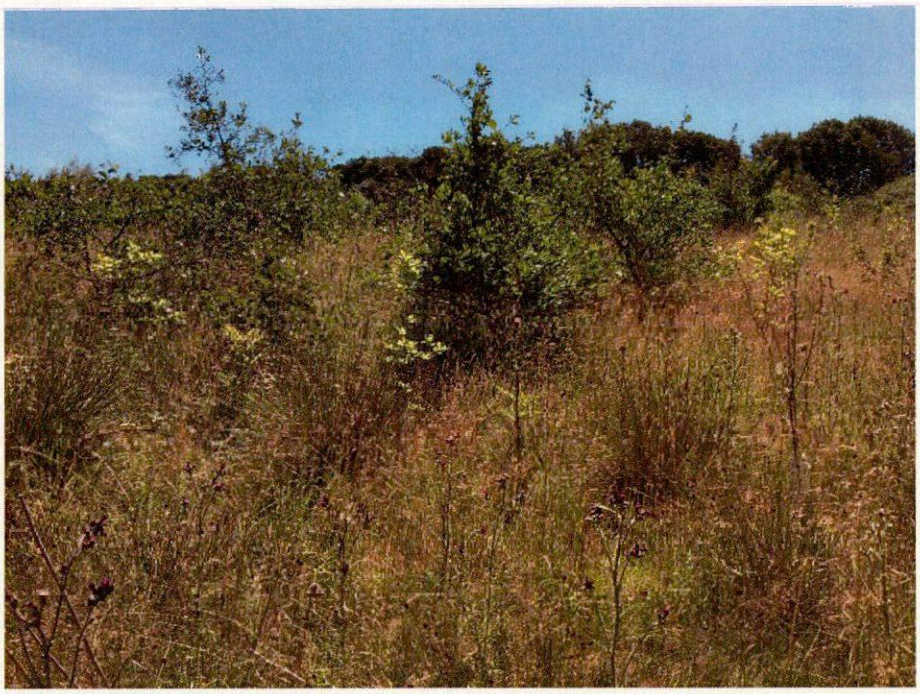

2.1.2 The central area of the site comprises restored meadow grassland habitat and this will be extended by soiling and seeding following regrading works.

Selective replacement of dead trees to ensure success of recent woodland planting

2.1.3 The area of young woodland to the east of the site, shown on the plan has suffered plant losses due to a hot summer followed by a very cold winter. Plant replacement is therefore proposed.

Regrade areas with steep slopes and seed to establish meadow grassland

2.1.4 To the south of the existing access road, in the central area of the site, there are steep north and northwest facing slopes which require regrading works followed by seeding to provide meadow grassland habitat.

Use existing soil heaps to assist with regrading works

2.1.5 Existing soil stored on site will be used to supplement the regraded areas and in the creation of new areas of meadow grassland.

Manage existing pond 1

2.1.6 Pond 1 is located to the northwest of the existing access road adjacent to existing woodland. This pond is to be managed to maintain capacity and vegetation and habitats.

Manage existing pond 2

2.1.7 Pond 2 lies the east of the existing quarry access road as shown on the restoration plan. This pond is to be managed to establish wetland habitat and existing reeds are to be controlled to retain open areas of water.
