Tree Report

Dear Mr Green,

Having visited your property today to assess the condition of the sycamore to the right side of the drive when entering.

Species of the tree - Sycamore (*Acer pseudoplatanus*)

Physical measurements Height 11m - Girth 750mm

Age of the tree. Est approx. 75/90 years

Overall health of the tree - Poor health; There is a large amount of die back in the top of the crown and other areas of the crown. Also the leaf area is very poor, a lot of small rot pockets on the main stem, restricted root ball which has caused part of the small wall to collapse.

In my opinion the tree requires removing on safety ground due to been close to a main road

Yours Sincerely

Paul Elbourne
