Local Requirements

Proposal: Agricultural general purpose building
Site Reference: Mr B Drewery, Lower Belle Clive Farm, Hartcliff Road, Penistone, Sheffield. S36 9FE

Affordable Housing Information
Not Applicable

Agricultural Developments Statement
Agricultural Holding No.
47/723/0025

Size of holding
The applicant currently farms 45 acres. This figure includes existing agricultural buildings and yard area.

This farmland is used to rear cattle and sheep and to produce fodder.

Animals kept at the site
The applicant currently farms 6 head of cattle and 30 head of sheep.

Existing buildings on the holding
The applicant currently has no agricultural buildings on this parcel of land and is therefore fully aware of the inadequate housing and storage facilities available. The applicant is finding it increasingly difficult and impractical to manage this parcel of land without a building. There is not sufficient enough room in the existing grouping of buildings at Lower Belle Clive Farm to house the stock levels and to store the fodder and implements required to manage the holding. The existing buildings at Lower Belle Clive Farm are used to house livestock and to store fodder and implements.

Additional rented buildings/land
The applicant does not currently rent any additional buildings or land.

Proposed size of building
The applicant wishes to erect a steel framed agricultural building 18.288m long x 12.192m wide x 3.658m high to eaves level.

The floor area created by this development will be 222.97m².

Proposed use of building

As a result of the applicants expanding business he requires this building to house and lamb sheep and to house and feed cattle. This building will also be used to store fodder and implements.

The applicant currently has no agricultural buildings on this parcel of land and is therefore fully aware of the inadequate housing and storage facilities available. The applicant is finding it increasingly difficult and impractical to manage this parcel of land without a building. There is not sufficient enough room in the existing grouping of buildings at Lower Belle Clive Farm to house the stock levels and to store the fodder and implements required to manage the holding.

This building will accommodate the required stocking densities and ventilation and also allow for a well-drained, dry lying area. All animals will have access to an adequate supply of clean drinking water at all times. This building will ensure good farm/stock management with easily maintained clean and hygienic conditions. This building will ensure a good strong future for his business.

Defra regulations state that animals are not meant to poach the ground therefore housing for animals is essential.

The Welfare of Farmed Animals (England) Regulations 2000 (S.I. 2000 No. 1870) Schedule 1, paragraph 13, states that:

- air circulation, dust levels, temperature, relative humidity and gas concentrations shall be kept within limits which are not harmful to the animal

All new buildings should be designed with the animals' comfort in mind, and with the aim of preventing respiratory diseases. The buildings should provide enough ventilation throughout the year for the type, size and number of stock to be housed in them.

FABBL requirements state that the space allowance for loose-housed cattle on a solid floor is a minimum of 3.0m² for 200kg cattle, 3.4m² for 300kg cattle, 3.8m² for 400kg cattle, 4.2m² for 500kg cattle, 4.6m² for 600kg cattle and 5.0m² for 700kg cattle.

FABBL requirements state that the space allowance for loose-housed sheep on a solid floor during pregnancy is a minimum of 1.2m² - 1.4m² and 2.0m² - 2.2m² after lambing with lambs at foot up to six weeks of age.

Shelter should be provided for sheep especially in cold, wet, windy weather, at lambing and after shearing. Very young lambs are particularly susceptible to hypothermia in cold wet weather.

Deep litter bedding will be used on the solid floor; this bedding will then be spread back on the applicants land.

This building will also be used to store bales of hay (produced off the applicant's land). By enabling these bales to be stored in the building it will reduce the use of plastics therefore creating a more environmentally friendly holding.

In addition to the above this building will also be used to store implements. These implements are currently left outside exposed to the elements at Lower Belle Clive Farm. Implements are transported to and from this parcel of land which is impractical, time consuming and not cost effective. This building will also enable the applicant to have shelter to mend any broken down implements. Implements to be stored include tractors, trailers and general agricultural equipment required to run the holding. This building will enable the equipment to be kept out of view and restricts the chances of the implements being stolen.

This proposed building would enable the applicant to keep his fodder and implements on this parcel of land making the farm a more efficient unit.

Employment at the site
The applicant currently runs the holding himself and does not employ anyone on the holding.

Landscaping Details
This site is well screened from the existing plantation located west of the proposed building.

The applicant is happy to carry out any landscaping scheme specified by yourselves in order to protect the amenities of the site and the area.

Any trees planted will be fenced from livestock and will be protected by either spiral-type rabbit guards with canes or Netlon mesh-type guards including canes.

A circle of 1 metre around the base of each tree shall be kept weed free for a period of at least 2 years.

Any trees that die, become seriously damaged or diseased will be replaced by trees of similar size, unless there is reason to believe that the original species chosen was unsuitable for the site, in which case an alternative appropriate species will be used.

All planting would be carried out in the first planting season following the construction of the building.

Trees will be provided in accordance with BS 3936 and planting to be in accordance with BS 4428.
