Design & Access Statement

For SKF Lo Pharmacy
Woodland Drive
Barnsley
S70 6QW

It is proposed that three electrically operated roller shutters are to be installed one each to the two windows and one door on the front elevation of the building.

The shutters will be constructed from a double walled aluminium profile lath with a powder coated finish. This type of shutter has been selected because it rolls into a small 205mm x 205mm box and the side guides are the least obtrusive type so that the appearance of the building is not affected more than necessary.

The shutters are required because of the nature of the business being a pharmacy and medicines, drugs and other products being stored on site.

The type of shutter selected offers a 40mm high double walled curtain with a front surface which has a minimal curved profile.
