Below are some examples of our barrier netting installations at golf courses and driving ranges. We can undertake any kind of large-scale barrier, perimeter or protective netting installation. Please contact us to discuss your requirements.

Worcester Driving Range**World of Golf, Glasgow**

Here we installed perimeter netting which is 9 metres high and fitted to wooden masts spaced 12 metres apart with black polyethylene netting. A two metre high chain-link security fence was also fitted around the bottom of the net. Personnel safety netting was installed on the first floor of the range building.

We provide a wide range of stop netting for golf courses, driving ranges and other golf practice applications. Our golf netting is sold by the square metre. It is all manufactured from UV-protected polyethylene or polypropylene so will not rot, as nylon will. Various types available.

28mm knotted black polyethylene

This netting is the type most commonly used on our installations. It has a mesh size of 28 mm and 1mm twine. Ideal for installations exposed to strong wind.

Made from black, UV-stabilised polyethylene it is light but very strong and durable, with a life expectancy of approximately 9 years.

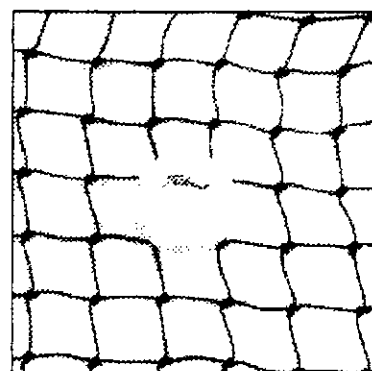

Price per square metre

(200001) Black **£1.00****28mm knotted green polyethylene**

Similar to the product above, but this netting uses a slightly thicker 1.2mm twine.

It is made from green, UV-stabilised polyethylene and is very durable, with a life expectancy of approximately 9 years.

Price per square metre

(200002) Green **£1.25****25mm green knotless polypropylene**

25mm x 2.3mm green knotless polypropylene. It is very heavy duty and is particularly suited to lower installations of 4 metres or below, and offers high impact protection for applications such as practice nets or bay dividers on driving ranges. It is supplied with over-stitched borders for easy fitting. This netting is not suitable for high level
