the Apex

Many customers prefer the appearance of a pitched roof and to compliment our Pent buildings Lidget Concrete offer the Apex range. With improved drainage qualities and greater strength this roof offers a wider choice of sizes.

Incorporating quality produced components and exceptional proven build quality this range of buildings would satisfy the most discerning of customers.

The Apex roofs have 70 x 70mm planed and treated wooden purlins fastened to primed and fabricated steel trusses with fibre cement asbestos free (non-combustible) sheets nailed into position using rust proof fixings then capped out with galvanised steel roll ridge cowlings.

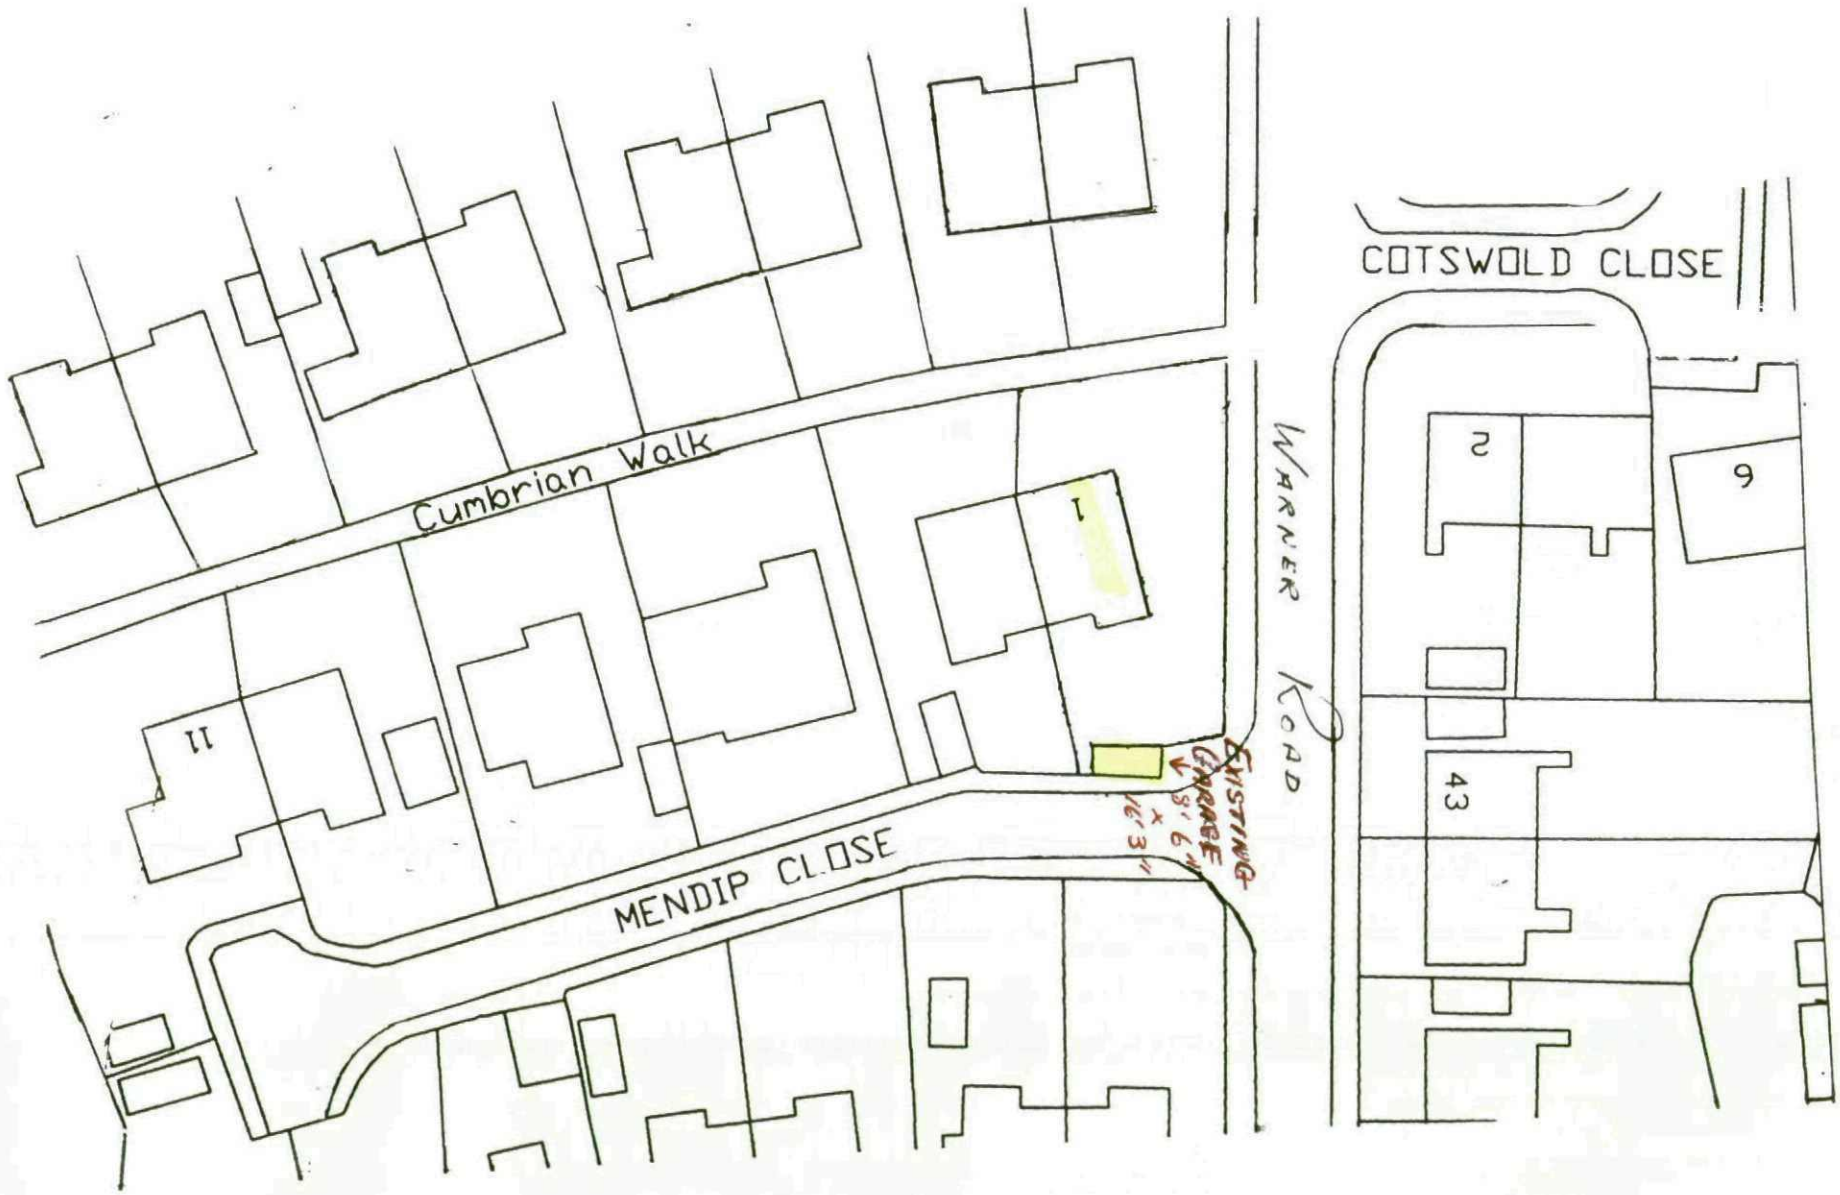

With many options available to personalise your building please do not hesitate to ask your agent for help and friendly advice to ensure you receive the specification to suit your requirements.
