Envirocheck Report
Coal Authority Mining Report

EXECUTIVE SUMMARY

1. Eastwood & Partners were instructed by Chris Carr Associates to carry out a desk study and walkover survey on 0.37 hectares of land located at Hilltop Farm off Redbrook Road, in Barnsley.
2. The site is located at National Grid Reference 432750, 407290 and consists of several farm buildings including a mixture of barns and cottages.
3. The land has been used to site farm buildings since prior to 1855. The land to the east, south and west of the site is residential housing. A green field occupies the land to the north west.
4. Ground conditions are anticipated to be made ground, clay or sand overlying sandstone in the south east of the site and undivided mudstones of the Middle Coal Measures in the north west.
5. The most suitable foundation solution is expected to be unreinforced strip footings founded on undisturbed clay / sand at a minimum depth of 900mm, deeper near trees. It is expected that some foundations will be taken greater than the minimum depth if the site levels are changed or significant amounts of Made Ground are encountered on site.
6. It is anticipated that ground bearing floor slabs will be used at this stage and that Design Sulphate (DS) Class 2 precautions will be required.
7. At this stage it would be advisable to assume that a 600mm clean capping will be required in garden areas and that basic radon type gas protection measures will be required.
8. Uncertainties within the conceptual model indicate that a ground investigation is required at the site to identify ground conditions, the hydrological regime and any possible contaminants within the ground. The ground investigation will also provide details for the calculation of the Design Sulphate Class and volume change potential of the natural strata.
9. Ideally the site will be designed in such a way that any excavated material can remain on site. If material is to be removed from the site it will need to be taken to a suitably licensed landfill site and may be subject to Waste Acceptance Criteria testing.
10. The conclusions made in this report with regard to contamination are subject to agreement by the approving bodies, the Local Authority and the Environment Agency.

1.0 INTRODUCTION

This report presents the findings of a Phase I Geoenvironmental Site Investigation carried out by Eastwood & Partners for and on the written instructions of Chris Carr Associates (dated 31st October 2007). The aims and objectives of this are as follows:

- Review information extracted from published documentation. Information regarding the current and former land uses both on and surrounding the site as well as the environmental sensitivity of the site location, as determined by factors including geology, hydrogeology and hydrology, will be considered;
- Provide information on the current status of the site as obtained from a brief site reconnaissance;
- Derive a conceptual site model identifying potential contaminants, pathways and receptors, which will subsequently enable the identification of significant pollutant linkages between these;
- Give an initial assessment of the probable geotechnical solutions and precautions associated with contamination.

Information analysed in this report has been obtained from a variety of sources and includes the following:

- Geological Survey of Great Britain, Geology of the country around Barnsley (87);
- Geological Survey Map, Sheet SE 30 NW;
- Information from the Environment Agency regarding environmental issues such as groundwater sensitivity and flooding;
- Historical Ordnance Survey maps.

The recommendations are based on the assumption that the future development will comprise residential dwellings with private gardens.

All information, comments and opinions given in this report are based on the information gained from the geological and historical desk study. There may, however, be conditions at the site, which have not been taken into account.

This report was prepared for the sole and exclusive use of Chris Carr Associates in response to particular instructions (dated 31st October 2007). Any other parties using the information contained in this report do so at their own risk, and any duty of care to those parties is excluded, unless previously agreed with Eastwood & Partners.

2.0 THE SITE

2.1 Description

The site, Hilltop Farm is centred on National Grid Reference 432750, 407290, to the north of Redbrook Road, north west of Barnsley. The site comprises land off Redbrook Road, Barnsley and covers an area of approximately 0.37 hectares and is approximately level. The site is currently being used as a farm, with a number of occupied cottages and disused barns.

Along the west of the site is a stoney track which is indicated to be Hilltop Lane. Adjacent to the track are a stone built 3 storey high barn and several brick built 2 storey cottages. To the east of the site is another stoney track which leads to no. 32, adjacent to the track is an overgrown grass lawn with several trees (including horse chestnut, laburnum, and conifers). Between the grass lawn and the barn to the west is a line of brick built garages, ending with a 3 storey stone barn and stone lean to and another area of grass. The north of the site comprises no. 30 and 32 with private garden areas.

The site is mainly surrounded by residential housing and a green field to the north west with Redbrook Road to the south.

2.2 History

The Historical Ordnance Survey maps of the site and surrounding area were reviewed from the Envirocheck report enclosed. These maps have been reviewed for the purposes of establishing previous land usage in the vicinity of the site. Copies of the historical maps are presented in the Appendix.

2.2.1 Site

The earliest maps (1855 to 1931) indicate a farm on the site, labelled Gawber Height. The farm consists of one large L-shaped building in the south west of the site and two large buildings in the northern half. Additional smaller buildings are present across the site. The north eastern part of the site is indicated to be wooded (orchard) and a path is shown in the south east of the site connecting to the road.

By 1906 the individual farm buildings are shown with the buildings in the north shown as cottages. The 1960 map indicates the lane to the west of the site to be Hill Top Lane, and three more cottages have been constructed between the two buildings in the west of the site. By 1991, four of the cottages in the north west of the site have been demolished. There are no other changes up to the present day.

2.2.2 Surrounding Area

The earliest map, dated 1855, shows the land surrounding the site to be agricultural in nature. The village of Gawber lies 150 m to the west. Several sandstone quarries are present, the closest being an old quarry 200 m northwest of the site. The Manchester, Sheffield and Lincolnshire Railway runs north east - south west, passing 800 m south of the site. The Lancashire and Yorkshire Railway runs east - west and passes 850 m north of the site. The town of Barnsley lies around 1.5 km to the south east.

Little change is shown until 1938 when a large residential development is shown occupying land to the east of the site. Several collieries are now indicated, the closest is to the northwest of Gawber Hall approximately 500 m north west of the site. Barnsley has been increasing in size with residential areas now approximately 500 m south east of the site.

By 1966 residential housing is constructed to the west of the site and beyond Gawber Road to the south of the site. Three opencast workings are shown, the closest is located 450 m south west of the site. These are no longer shown on the 1973 map. By 1993 housing has now been built to the north of the site, though the land immediately adjacent to the north and north west remains open. No significant change is shown after this time.

2.3 Geology & Groundwater Vulnerability

The British Geological Survey map SE 30NW (1:10,560 scale) and Barnsley geological memoir were reviewed. These showed the site to lie on Carboniferous undivided mudstone and sandstone coal measures, dipping towards the north east. The Barnsley Rider Coal Seam is indicated to outcrop 150m to the west of the site.

The Groundwater Vulnerability Map, shows the site to lie on a minor aquifer with soils of high leaching potential. The site has been given this classification due to its urban location and subsequent lack of sampling.

2.4 Asbestos

Due to the age of the farm buildings on site it may be prudent to have an asbestos survey performed on the site. If suspected asbestos containing materials are identified then, in accordance with the Control of Asbestos at Work Regulations 2002, the compilation of an asbestos register and an appropriate programme to manage the risks associated with such materials should be undertaken.

2.5 Mining

The shallowest named coal seam below the site is the Barnsley Rider Coal, which outcrops around 150 m west of the site. Information contained in the geological memoir states that this is a thin seam, around 0.15 m thick. Using information from the geological map this seam has been calculated to lie around 16 m below the site. Due to the thickness of the coal seam it is not usually worked.

Around 30 m below the Barnsley Rider is the Barnsley Coal. Using information from the geological memoir and strata logs from the nearby East Gawber Hall Colliery, this occurs as hard and soft coals with a total seam thickness of around 2.7 m. It has been mined extensively throughout Yorkshire. Information provided by the geological map states that the Barnsley seam lies at 55 m below the surface in the nearby Gawber Colliery. The Barnsley Coal is a maximum of 3 m thick and is anticipated to be 46 m to 55 m below the site therefore any workings at this depth will not affect surface development as the competent rock is greater than ten times the seam thickness.

A Coal Authority report has been obtained and is enclosed in the appendix. This indicates that the site is within the likely zone of influence from workings in 6 coal seams at 110 m to 390 m depth and last worked in 1982. There are no recorded shafts or adits within the site, or within 20m of the site boundary.

There are currently no licences to extract coal by either underground or opencast methods in place or awaiting determination by the Coal Authority, and there are currently no plans to begin extraction in the area. The report does state that reserves of coal still exist in the area, which could be worked in the future subject to feasibility and planning consents. This is considered to be highly unlikely given the thickness of the coal seams and due to the demise of the UK coal industry.

Four claims for alleged subsidence resulting from underground mining were made between 1980 and 1982, all of which were discharged by repair. No further details are known by Eastwood & Partners. However, the Coal Authority holds records of the claim history which can be obtained for an additional fee, payable to them.

2.6 Ground Gases

2.6.1 Landfill Gas

Information from the Envirocheck Report indicates there are two landfill sites within 500 m of the site. The largest of these lies 210 m north west of the site boundary. This site is classified as an historical and Local Authority Recorded landfill. The waste accepted included commercial and household waste. Its current status is recorded as unknown.

The second landfill site lies 375 m north of the site. This is classified within the Envirocheck Report as an historical landfill, named Gawber Refuse Tip. The type of waste accepted included commercial waste.

2.6.2 Radon Gas

Information contained within the Envirocheck Report states that basic radon protective measures are necessary in the construction of new dwellings at the site.

2.7 Flooding

The property is not situated on a flood plain and therefore is considered to be at insignificant risk of flooding by rivers.

The nearest watercourse is a small stream located 300 m north east of the site.

3.0 GEOTECHNICAL

3.1 General

The anticipated strata of firm sandy clays underlying the site would be suitable founding strata with a predicted safe bearing capacity of 125kN/m^2 and a predicted volume change potential of medium. There may be minimal made ground present on site which should be excavated through for foundations.

3.2 Mining Risk Assessment

Using information provided by the geological map it has been calculated that the thin seam of Barnsley Rider Coal lies at a depth of around 15 m below the site, and the Barnsley Coal seam lies 46 – 55m below the site. It is anticipated that the Barnsley coal seam may have been worked however at the depth calculated the coal seam will not effect the site. The Coal Authority Report states that the shallowest worked coal seam below the site is 110 m. This is outside the distance of influence of the site and, therefore, the risk from shallow mining is considered to be low.

3.3 Foundations

Strip footings founded into the anticipated undisturbed natural firm clay at a depth of 900mm are expected to be suitable for this site. However the footings will require deepening through any made ground encountered on the site.

Due to the presence of existing and proposed trees in the gardens and open spaces of the proposed residential plan footings may require deepening in accordance with the NHBC Standard 4.2, Building Near Trees.

If excessive Made Ground is encountered below the existing farm buildings to be demolished then strip footings may not be suitable and the foundation type would be dependant on the depth of the Made Ground encountered.

3.4 Ground Slabs

Ground bearing floor slabs are likely to be suitable for this site due to the probable amount of made ground on site being anticipated as less than 600 mm. Basic radon precautions are required within the ground slabs.

Where footings for the plots affected by trees are in excess of 1500 mm deep due to past or present tree growth, a precast concrete floor should be used with a void below it. The height of the void is dependant on the shrinkability of the soil as prescribed by NHBC Standards and should be at least 175 mm for soils of medium shrinkability.

3.5 Roads

It is expected that a CBR value of 2% can be assumed for roads built within the natural sandy clay, provided the formation is proof rolled and soft spots removed. However, this will need to be agreed with the Local Authority prior to siteworks.

3.6 Problems due to Past Development

There may be foundations, cellars, basements or former service trenches associated with the previous farm buildings on the site. Any foundations will need to be deepened through any made ground encountered.

3.7 Excavation Difficulties

The stability of the sides of the excavations is likely to be poor within any made ground or sand encountered on site, however within the clay material the site of the excavations are expected to be generally stable.

Any excavations where men will enter over 1.2m deep, or less where there is a risk of harm from collapse of the sides of the excavation, the sides should be supported or battered back to make them safe.

3.8 Surface Water Drainage

Soakaways may be a viable method of drainage, given that most of the site overlies sandstone. Soakaway tests would be necessary to confirm viability. Alternatively surface water could be taken to an appropriate drainage system.

3.9 Sulphate Attack of Buried Concrete

Due to the possibility of contamination on site it is suggested that a Design Sulphate Class 2 is anticipated at this stage.

4.0 OUTLINE CONCEPTUAL MODEL

4.1 Site Summary

4.1.1 Description of the Site

The site comprises land associated with use as a farm with a mixture of occupied cottages and disused barns, covering an area of 0.37 hectares.

There are two tracks to the east and west of the site. Within the centre of the site there is a grassy enclosure between the barns, cottages and garages and a grassed area (possibly old orchard) to the east of the buildings. To the north of the site beyond the cottages and barns are two detached properties with private gardens.

4.1.2 Description of the Surrounding Area

The site lies to the north of Redbrook Road, to the west of Barnsley. Residential properties surround the site to the east and south. Open land lies to the north west.

4.1.3 Geology

On the basis of information obtained from geological publications the basic ground types are expected to be sandstone to the east of the site and undivided sands and muds to the west.

4.1.4 Site Characterisation

Considering the historical land use on the site and the hardstanding present on site it would be considered unlikely that significant contamination will be present as a result of past developments at the site. However, possible sources of contaminants include imported fill to site to be used beneath hardstanding and past spillages of agricultural chemicals or oils, not presently apparent. It should also be noted that some elements, particularly metals and metalloids, could naturally occur at elevated concentrations. There were no tanks apparent on site and no obvious signs of contamination noted during the sitewalkover survey.

4.2 Ground Gas Potential

There are two recorded landfill sites within 500 m of the site. It is possible that gas monitoring may be required subject to confirmation with the local authority and the NHBC.

4.3 Potential Pollutant Linkages

Contaminant	Pathway	Receptor
Farming chemicals stored on site.	Ingestion and inhalation.	Future residents and visitors to the site.
	Direct contact	Plants.
	Leaching and migration.	Plastic service pipes. Minor aquifer.
Metals and Metalloids.	Ingestion.	Future residents and visitors to the site.
	Root uptake.	Plants.
	Leaching and migration.	Minor aquifer.
Asbestos	Inhalation	Site workers
Sulphates and other acidic compounds	Direct contact.	Buried concrete structures.

4.4 Rationale for Further Investigation

Uncertainties within the conceptual model arise from a lack of specific knowledge about the ground conditions and hydrogeological regime underlying the site, as well as concentrations of contaminants in the ground.

The potential pollutant linkages presented above should be investigated by means of an intrusive ground investigation, including soil and possibly groundwater analysis. The chemical testing suite should be chosen to cover the range of potential contaminants indicated above.

5.0 RECOMMENDATIONS AND APPROVALS

1. Further investigation is required on this site to confirm the strength of the underlying strata and remove the uncertainties within the conceptual model. The chemical testing suite should be chosen to cover the range of potential contaminants indicated within the conceptual site model. Due to the probability of made ground on site it is anticipated that a capping layer of 600 mm of clean material will be required for the garden and landscaped areas of the future development.
2. Due to the age and type of the buildings it would be prudent to have an asbestos survey undertaken on the site and any asbestos removed from the site prior to siteworks.
3. It is anticipated that basic radon precautions will be required for this site.
4. Further investigation will also allow the ACEC and DS Class for any concrete used on the proposed site to be identified. It is anticipated that DS Class 2 concrete will be required.
5. Ideally the site will be designed in such a way that any excavated material can remain on site. If material is to be removed from the site it will need to be taken to a licensed landfill site and may be subject to Waste Acceptance Criteria testing.
6. If odorous, brightly coloured, suspected asbestos or apparently contaminated material is found on site, this should be reported to site staff and tested to check if it is contaminated.
7. The conclusions made in this report with regard to contamination are subject to agreement by the approving bodies, the local authority and the Environment Agency.

Introduction

The Environment Act 1995 has made site sensitivity a key issue, as the legislation pays as much attention to the pathways by which contamination could spread, and to the vulnerable targets of contamination, as it does the potential sources of contamination. For this reason, Landmark's Site Sensitivity maps and Datasheet(s) place great emphasis on statutory data provided by the Environment Agency and the Scottish Environment Protection Agency; it also incorporates data from Natural England (and the Scottish and Welsh equivalents) and Local Authorities; and highlights hydrogeological features required by environmental and geotechnical consultants. It does not include any information concerning past uses of land. The datasheet is produced by querying the Landmark database to a distance defined by the client from a site boundary provided by the client.

In the attached datasheet the National Grid References (NGRs) are rounded to the nearest 10m in accordance with Landmark's agreements with a number of Data Suppliers.

	Groundwater Vulnerability Geological Classification: Minor Aquifer (Variably permeable) - These can be fractured or potentially fractured rocks, which do not have a high primary permeability, or other formations of variable permeability including unconsolidated deposits. Although not producing large quantities of water for abstraction, they are important for local supplies and in supplying base flow to rivers Soil Classification: Soils of High Leaching Potential (U) - Soil information for restored mineral workings and urban areas is based on fewer observations than elsewhere. A worst case vulnerability classification (H) assumed, until proved otherwise Map Sheet: Sheet 11 South Pennines Scale: 1:100,000	A13NE (N)	0	1	432769 407411

Yorkshire
Published 1931
Source map scale - 1:2,500

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840's. In 1854 the 1:2,500 scale was adopted for mapping urban areas and by 1896 it covered the whole of what were considered to be the cultivated parts of Great Britain. The published date given below is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas.

**Large-Scale National Grid Data
Published 1995**

Source map scale - 1:1,250

'Large Scale National Grid Data' superseded SIM cards (Ordnance Survey's 'Survey of Information on Microfilm') in 1992, and continued to be produced until 1999. These maps were the fore-runners of digital mapping and so provide detailed information on houses and roads, but tend to show less topographic features such as vegetation. These maps were produced at both 1:2,500 and 1:1,250 scales.

Published 1855

Source map scale - 1:10,560

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840's. In 1854 the 1:2,500 scale was adopted for mapping urban areas; these maps were used to update the 1:10,560 maps. The published date given therefore is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas. In the late 1940's, a Provisional Edition was produced, which updated the 1:10,560 mapping from a number of sources. The maps appear unfinished - with all military camps and other strategic sites removed. These maps were initially overprinted with the National Grid. In 1970, the first 1:10,000 maps were produced using the Transverse Mercator Projection. The revision process continued until recently, with new editions appearing every 10 years or so for urban areas.

Ordnance Survey Plan

Published 1993

Source map scale - 1:10,000

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840's. In 1854 the 1:2,500 scale was adopted for mapping urban areas; these maps were used to update the 1:10,560 maps. The published date given therefore is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas. In the late 1940's, a Provisional Edition was produced, which updated the 1:10,560 mapping from a number of sources. The maps appear unfinished - with all military camps and other strategic sites removed. These maps were initially overprinted with the National Grid. In 1970, the first 1:10,000 maps were produced using the Transverse Mercator Projection. The revision process continued until recently, with new editions appearing every 10 years or so for urban areas.

Coal and Brine Report

Hilltop Farm, Redbrook Road, Barnsley, South Yorkshire

This report is based on and limited to the records held by, the Coal Authority, and the Cheshire Brine Subsidence Compensation Board's records, at the time we answer the search.

Coal mining	Yes
Brine extraction	No

Information from the Coal Authority

Underground Coal Mining

Past

The property is in the likely zone of influence from workings in 6 seams of coal at 110m to 390m depth, and last worked in 1982.

Any ground movement from these coal workings should have stopped by now.

Present

The property is not in the likely zone of influence of any present underground coal workings.

Future

The property is not in an area for which the Coal Authority is determining whether to grant a licence to remove coal using underground methods.

The property is not in an area for which a licence has been granted to remove coal using underground methods.

The property is not in an area that is likely to be affected at the surface from any planned future workings.

However reserves of coal exist in the local area which could be worked at some time in the future.

No notice of the risk of the land being affected by subsidence has been given under section 46 of the Coal Mining Subsidence Act 1991.

Mine entries

There are no known coal mine entries within, or within 20 metres of, the boundary of the property.

Coal-mining geology

At the surface, there are no known faults or other lines of weakness due to coal mining that have made the property unstable.

Opencast Coal Mining

Past

The property is not within the boundary of an opencast site from which coal has been removed by opencast methods.

Present

The property does not lie within 200 metres of the boundary of an opencast site from which coal is being removed by opencast methods.

Future

The property is not within 800 metres of the boundary of an opencast site for which the Coal Authority is determining whether to grant a licence to remove coal by opencast methods.

The property is not within 800 metres of the boundary of an opencast site for which a licence to remove coal by opencast methods has been granted.

Coal-mining subsidence

A damage notice or claim for alleged subsidence damage was given, made or pursued in November 1982. The claim was discharged by repair.

A damage notice or claim for alleged subsidence damage was given, made or pursued in November 1982. The claim was discharged by repair.

A damage notice or claim for alleged subsidence damage was given, made or pursued in November 1982. The claim was discharged by repair.

A damage notice or claim for alleged subsidence damage was given, made or pursued in July 1980. The claim was discharged by repair.

There is no current Stop Notice delaying the start of remedial works or repairs to the property.

The Coal Authority has not received a request to carry out preventive work before coal is worked under section 33 of the Coal Mining Subsidence Act 1991.

Mine gas

There is no record of a mine gas emission requiring action by the Coal Authority within the boundary of the property.

Hazards related to coal mining

The property has not been subject to remedial works, by or on behalf of the Authority, under its Emergency Surface Hazard Call Out procedures.

Withdrawal of Support

The property is in an area for which notices of entitlement to withdraw support were published in 1956, 1977, 1977, 1976.

The property is not in an area for which a notice has been given under section 41 of the Coal Industry Act 1994, revoking the entitlement to withdraw support.

Working Facilities Orders

The property is not in an area for which an Order has been made under the provisions of the Mines (Working Facilities and Support) Acts 1923 and 1966 or any statutory modification or amendment thereof.

Payments to Owners of Former Copyhold Land

The property is not in an area for which a relevant notice has been published under the Coal Industry Act 1975/Coal Industry Act 1994.

Information from the Cheshire Brine Subsidence Compensation Board

The property lies outside the Cheshire Brine Compensation District.

Additional remarks

This report is prepared in accordance with the Law Society's Guidance Notes 2006, the User Guide 2006 and the Coal Authority and Cheshire Brine Board's Terms and Conditions 2006. The report is compliant with Home Information Pack requirements.
