Barnsley MBC
Planning Dept.

We wish to erect an Agricultural Building,
30' x 40' x 15' eaves height, sited within the curtilage
edge of the existing farm buildings.

Design Steel structure, cement fibre roof sheets
& roof lights, and concrete block walls.

One bay, 15' x 40' to be used as a dedicated
calving area - we calve approx. 150 cows per
year - using minimal bedding (straw), there will
be no slurry. The other bay we intend to
make into a secure tractor & tool store with a
lockable, roller shutter door.

The Site At the present time is waste ground
with modern agricultural buildings on 2 sides
(Photograph has already been submitted.)

It would NOT impede the Footpath which
runs along the top edge of the farmyard.

Access The farm is situated 550 yds from
Spicer House Lane on a private drive & the
new building would have no effect on the

existing vehicular access.

Landscaping is not practical as it joins two existing farm buildings (using same rain water gutters) & the two remaining sides are hard standing.
