SECTION 4:	SUMMARY	11

Introduction

Signet Planning has been instructed by Barratt and David Wilson Homes Yorkshire West to produce this Design & Access Statement to accompany the planning application for the substitution of house types at the former JC Snell Site, Hoyle Mill Road, Barnsley.

This Statement should be considered and read in conjunction with the accompanying plans.

The purpose of this Statement is to examine the character and structure of the development in accordance with the requirements for Design and Access Statements defined within DCLG Circular 01/2006 'Guidance on Changes to the Development Control System'.

In order to consider and explain the principles and concepts that have been applied to particular aspects of the proposal, this Statement is divided into the following sections.

Section 1: Introduction - Outlines the background and purpose of the document.

Section 2: Assessment - An assessment of the site and its surroundings and the national and local planning context.

Section 3: Design Proposals – Presentation of the design proposals, including the uses proposed, the amount, layout and scale of development, landscaping and appearance.

Section 4: Summary – Provides an overview of how the development proposals achieve the development principles and the design objectives established.

Site Description

The site, which has a net developable area of approximately 0.22ha, forms part of the north western corner of a housing development comprising 46 dwellings and 28 apartments and approved in outline (ref 2006/0285) with reserved matters subsequently being approved in September 2007 (ref 2007/0677). The application site is in the location where the 28 apartments had originally been proposed.

A number of the approved houses on the development have been constructed and as such the application site is located amongst these completed houses. Historically however, the site formed part of the JC Snell industrial site.

The site is located to the south west of Barnsley within the Stairfoot urban area.

Application Site

Application Site

The proposed residential development, the subject of the application has been formulated in light of the relevant design policies within the adopted Local Plan as well as advice in PPGs, PPSs and Circulars. Those considered to be of particular pertinence relating to Design and Access are set out below:

Central Government Guidance

PPS1: Delivering Sustainable Communities - sets out the Government's commitment to good design. It states that:

“Planning authorities should plan positively for the achievement of good quality and inclusive design for all developments, including individual buildings, public and private spaces and wider area development schemes. Good design should contribute positively to making better places for people. Design which is inappropriate in its context or which fails to take the opportunities available for improving the character and quality of an area and the way it functions should not be accepted”.

PPS3: Housing – also encourages a high standard of design and landscaping in new residential developments. Indeed PPS3 promotes more sustainable residential environments through requiring developers to make efficient and effective use of land. The guidance also makes specific reference to the need for the design to be of a form that integrates with and complements the local area (paragraph 16). The most appropriate or best use of a site such as this will comprise a scale and form of development that integrates into the area. PPS3 also recognises that good design is fundamental to the development of high quality new housing. Paragraph 13 confirms that good design should contribute positively to making places better for people.

The aforementioned Government Guidance is supplemented by other documents including the following:

- Building For Life—Delivering Great Places to Live (CABE Nov 2008)
- By Design – Urban Design in the Planning System: Towards Better Practice (DETR/CABE 2000).
- By Design – Better Places to Live: A Companion Guide to PPG3 (DETR/ CABE 2001).
- Safer Places – The Planning System and Crime Prevention (ODPM 2004).

- Planning and Access for Disabled People: The Good Practice Guide (ODPM 2003).
- Design and Access Statements: How to write, read and use them (CABE 2006).

The accepted principles of urban design as stated in By Design (2000) include:

- **Character** - a place with its own identity,
- **Quality of Public Realm** – a place with attractive and successful outdoor areas.
- **Ease of Movement** – a place that is easy to get to and move through.
- **Legibility** – a place that has a clear image, is easy to understand and clearly defines public and private space.
- **Adaptability** – a place that can change easily.
- **Diversity** – a place with variety and choice.

**BUILDING
FOR LIFE**

Local Planning Guidance (relating to Design)

The saved Barnsley UDP contains a number of policies relating to design. These are as follows;

Policy BE6 – Design Standards advises that the Council will seek good design standards for all development and that proposals will be assessed against a range of criteria including quality of layout, scale, landscaping treatment, detailing, materials and suitability with its context.

Policy BE6A – Design to Avoid Crime recommends that proposals are designed to avoid providing opportunities for crime. This should be achieved through consideration to parking areas, natural surveillance, lighting, boundary treatments and restriction of vehicular movements through the site.

Policy BE6B – Design and Access for the Public focuses on development which is accessible to the public including residential schemes. This policy requires where possible that proposals are accessible to public transport and that consideration towards special groups including wheel-chair users is given in terms of movement throughout the site and provision of over-sized parking spaces where necessary.

Policy BE6C – Pedestrians and Cyclists states “in assessing the design and layout of new housing developments, the council will seek to ensure access to local facilities for pedestrians and cyclists which minimise distance and the use of roads of more than local importance.”

Use

The application proposes a substitution of house types from that previously approved in decision 2007/0677 which related to the approval of reserved matters across the former JC Snell site. It is therefore intended to maintain the approved use of the site.

Amount

The application proposes 7 houses on the site, whereas the previously approved scheme (2007/0677) provided for 28 apartments. Four different house types are proposed which are as follows;

House Type	No Bedrooms	Number Proposed
Gloucester	4	3
Windermere	4	2
Ennerdale	3	1
Buchanan	3	1

Layout & Scale

The proposed layout of the dwellings, as shown on the plan below, is relatively loose and informal and reflective of layout of the remainder of the wider site.

Access to the proposed dwellings is taken from the estate road which serves the wider development and a new access onto Hoyle Mill Road is to be created to serve plots 75-77.

The overall scale of the proposed dwellings is less than the apartments that have been approved and are only 2 storeys in height compared with the 3.5 storeys as approved. In terms of site coverage, the areas covered by hard surfacing and buildings is significantly reduced from the situation as approved.

Above: Layout as Approved

Above: Layout as Proposed

Appearance and Landscaping

The proposed house types will be of similar traditional appearance to other dwellings within the wider development which have already been constructed.

In terms of the palette of materials, these are to match those houses already constructed and a condition is invited.

A selection of trees are proposed within the application site including silver birch, plena and mountain ash. These are to be distributed amongst the site along with shrubs and lawned areas.

Vehicular Access

Access into the site is via the existing road which forms part of the layout approved by reserved matters submission 2007/0677. A separate access onto Hoyle Mill Road serving plots 75-77 is also proposed.

Car Parking

Each property is to be provided with a driveway which will accommodate up to two cars and a single garage.

Sustainability

The properties are to be constructed to a minimum of Building Regulations requirements.

Proposed House Types

summary

- 7.1 In summary it is maintained that the design approach to this application has been comprehensive and as a result the indicative proposals will serve to create an attractive residential neighbourhood with its own individual character and sense of identity.
- 7.2 It is maintained that the residential development will improve the character of the area by providing modern forms of housing, creating diversity and attracting different residents in order to build the local community. Within this context we consider that the proposals accord with the Government Guidance relating to design, since it will deliver an opportunity to improve the character and quality of an area in a manner that would protect the amenity of the existing residential area.
- 7.3 The overall aim of the design proposals has been to create a modern, diverse, aesthetically pleasing residential environment where the residents will feel a sense of 'belonging' and that this will impact positively on the broader community.
- 7.4 It is maintained that this Design and Access Statement accords with the requirements identified within Circular 1/2006 and on the basis of this assessment a grant of outline planning permission is justified with an appropriate design approach having been taken in the formulation of the indicative residential scheme.
