Key

- Site Boundary
- Woodland Clearance Extent
- Proposed Woodland Replanting

The monitoring and management of reinstated woodland habitat will be ensured through a Biodiversity Enhancement Management Plan (BEMP), to be approved in writing by the LPA. This will include a schedule of actions maintain woodland at the target condition for a period of 30 years. Ecological monitoring will be undertaken in years 2, 5, 10, 20 and 30.

No site maintenance specific to the roost will be undertaken as the culvert will not be directly impacted by the proposed works. Bat boxes installed to provide alternative roost provision during works will be left in place and thus will continue to provide roosting opportunity for bats after works are completed.
