**Details**

**About 'V' Mesh**

'V' profile mesh fencing gets its name along with its unique look from the distinctive 'V' shapes that are pressed into the panel. These shapes help provide strength and durability whilst simultaneously making the fence look stunning and making it incredibly hard to scale.

**What Does It Consist Of?**

The 'V' mesh panels are made up of 5mm thick steel wires that run vertically and horizontally intersecting each other as they go. This makes up the mesh pattern of the fence. The panel then has the distinctive 'V' shapes pressed into it helping to increase the panels strength and durability. The panel is then hot dipped galvanised and powder coated to increase the durability of the panel even more as well as to help it resist the elements.

**Powder Coating Options**

When it comes to the powder coated finish of your mesh fencing we can offer a varied amount of colours. We can provide mesh fencing in RAL standard colours along with just about any colour you can think of. This helps to ensure that you get a fence that will blend perfectly with the surrounding area of your premises. Notethat non standard colours may increase the league time of your fence.

**Additional Information**

Height	3.0
Material	Galvanised Steel
Width	3.05m
