

Please do not approve this development. The large scale destruction of green space in a time of climate and environmental emergency is unconscionable. We should be preserving green space and habitats wherever possible. Indeed we should be planting trees not ripping them out. The long term impact on the planet and also local residents far outweigh any potential proposed benefits. I am concerned about the loss of wildlife, the impact on air quality, potential increased risk of flooding and the overall detriment to the eco systems as well as local people. It is heartbreaking to see the amount of green space being ripped up across the borough when there are other brownfield sites that could be developed. This is a huge proposed development that will destroy precious green space. Please do not do it.
