4/12/15

Dear Sir/Madam,

We are currently waiting for trees T2 and T3 on enclosed plan to be removed as they have been the cause of subsidence damage to the Gables Cottage which is part of our property. These trees have been passed for removal by BMBC. It was when my neighbour received his communication from you regarding the removal of these trees that I became aware of the amount of damage T7 has caused to his property.

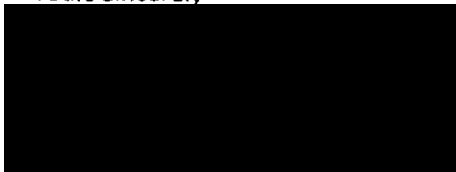

He approached me to ask which trees the letter was detailing and at that time I thought that one of them (T3) was in fact T7. You will notice from the copy of his letter I have sent you that (T3) was to be removed. I hope you can understand why this mistake was made. I assured him that I would send an application to you to have T7 cut back and I'm hoping you will allow us to do this.

I was hoping that I could ask the tree surgeons to carry out this work when they come to remove T2 and T3. Of course, we will be paying for this work to be carried out as the other trees are being removed through our home insurance.

We have waited nearly five years for this claim to come to fruition and now at last it has so If at all possible, could you make a decision as soon as possible, I would be extremely grateful. I don't want my neighbour to spend the winter wondering what damage the tree is going to cause next time we have big winds.

I spoke to Edward Jowett from Tree preservation and he was very helpful and assured me that as soon as he receives your response, he would set the ball rolling.

Yours Sincerely

Dear Sir

APPLICATION NO: 2015/1360

DESCRIPTION: Felling of Sycamore (T2) and Ash (T3) within TPO 22/1973

LOCATION: The Gables, Carlton Road, Barnsley S71 3JD

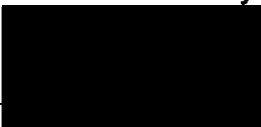

actually T7

The branches of Ash tree (T3) overhang my property to a worrying degree. Twice in the last few years, during high winds, the branches have taken off a ridge tile and ceilings in a bedroom, in a lounge and in the kitchen at the east end of my property adjacent to T3 have cracked. A garden hut is also overhung and a few years ago a falling branch caught and damaged the hut roof. My garage roof is also cracked and lets in rainwater. All these defects can be inspected.

When I look up through the branches, particularly in winter when there are no leaves, I dread the falling of further branches, some of which are substantial and far reaching.

The above reasons lead me to support the felling of Ash tree (T3)

Yours faithfully
