Design and Access Statement for the proposed sign to Royston Lifelong Learning Centre, Station Road, Royston, Barnsley, S71 4EP

The design of the road side sign and wall sign will be of a similar standard as those used by the local council highways department, local council and NHS.
Its purpose is to inform the public of the whereabouts of the new building and its amenities, currently there is no signage in place and local residents do not know the facility exists.
The building is designed for the use by the local public, local councils and any other party, so advertising its existence and location is key to help the area and give the building its identity.
The main road sign will be mounted on 2, 4 inch posts which will be concreted into the ground to at least 2 ft. The sign will be mounted onto the posts using 4 steel clips.
The wall mounted sign will be plugged and screwed to the wall.

There will be no access issues around the location of the proposed sign, the road side sign will be placed adjacent to an existing sign and will not be fitted any higher or lower than the existing sign so as to keep the area uniformed. The wall sign will be mounted on the building it's self at approximately eye level height and will not project.
Given the close proximity of large trees approximately 4 meters from the proposed location of the sign, there should not be any issues with light depredation to the nearest neighbours across the street, nor will the sign be illuminated.
