Risk of Flooding from Reservoirs

Reservoir flooding is extremely unlikely to happen.

The shading on the map shows the area that could be flooded if a large reservoir were to fail and release the water it holds. A large reservoir is one that holds over 25,000 cubic metres of water, equivalent to approximately 10 Olympic sized swimming pools. Since this is a worst case scenario, it's unlikely that any actual flood would be this large.

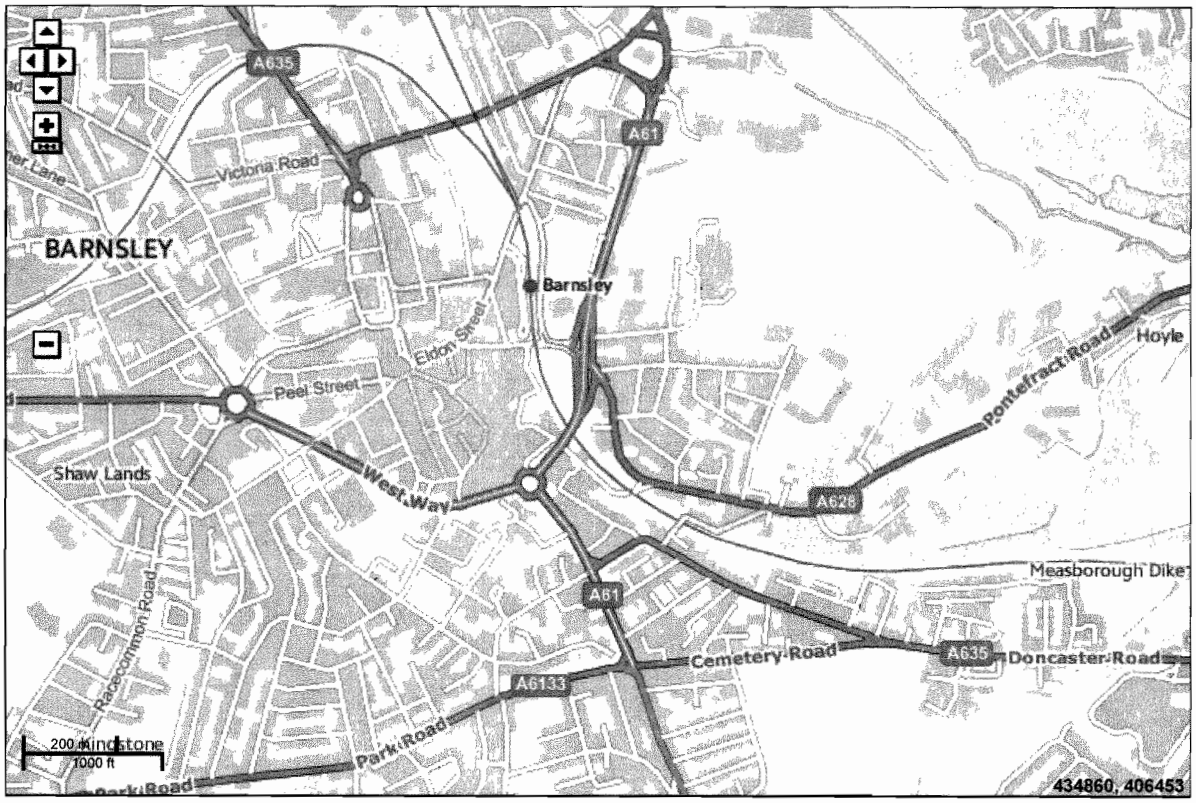

Click on the shading to see details of reservoirs that could cause flooding in this area.

APPENDIX A - CONTAMINATION RISK ASSESSMENT

Appendix A

DESK STUDY ASSESSMENT OF POTENTIAL CONTAMINATION RISK

Land Use Risk Assessment

An assessment has been carried out for a number of common past land uses, indicating the severity risk rating that should be used. Where little is known about a site the higher land uses found and rating range figures should be used. Also given are the recommended chemical tests associated with a site investigation, however the exact tests will be determined on a site by site basis.

Site Contamination Risk Assessment

In assessing overall contamination risk, the following categorisation has been developed:

Term	Description
Very High Risk	There is a high probability that severe harm could arise to a designated receptor from an identified hazard at the site without appropriate remedial action. Investigation required (if not already undertaken) and remediation very likely to be required.
High Risk	Harm is likely to arise to a designated receptor from an identified hazard at the site without appropriate remedial action. Investigation required (if not already undertaken) and remediation likely to be required.
Moderate Risk	It is possible that without appropriate remedial action harm could arise to a designated receptor. It is relatively unlikely that any such harm would be severe, and if any harm were to occur it is more likely that such harm would be relatively mild. Investigation usually required (if not already undertaken) and remediation may be required.
Low Risk	It is possible that harm could arise to a designated receptor from an identified hazard. It is likely that, at worst if any harm was realised any effects would be mild. Investigation may be required (if not already undertaken) but remediation is unlikely to be required.
Negligible Risk	The presence of an identified hazard does not give rise to the potential to cause harm to a designated receptor. Investigation may be required (if not already undertaken) to confirm.

APPENDIX B

Risk matrix to be used when assessing risk for conceptual site model

		Severe	Medium	Mild	Minor	>12 = Very High
	Risk	4	3	2	1	12 = High
High Liklihood	4	16	12	8	4	8 to 9 = Moderate
Likely	3	12	9	6	3	4 to 6 = Moderate / low
Low Liklihood	2	8	6	4	2	3 = Low
Unlikely	1	4	3	2	1	1 to 2 = Very Low

Risk	Risk Rating
Very High	5
High	4
Moderate	3
Moderate / Low	2 to 3
Low	2
Very Low	1
