1.0 Introduction

Bright Young Consulting was instructed by the land owner Mr B Riley to undertake a desk study on a parcel of land at 49 Pitt Street, Wombwell in connection with the proposed redevelopment of the site for residential housing.

The purpose of the report is to provide an initial evaluation of ground conditions and to carry out a phase 1 risk assessment for the proposed redevelopment.

The report is based on the desk study records referred to in the following text and contained in the appendices to the report.

2.0 Site Description

The site, which extends to approximately 0.15 Ha, is located in a semi-rural location approximately mid way between Wombwell and Snape Hill and has highway access from Pitt Lane.

The site is bounded to the north by Pitt Lane, to the east by residential properties and to the west and south by open land.

The site is currently developed as a garage property with associated car parking.

3.0 Historical Development

Site development history has been reviewed by reference to historical maps and ordnance survey plans dating from 1854/55, full copies of which are presented in appendix B.

The relevant aspects of the on-site and local surrounding development may be briefly summarised as follows.

Prior to 1855, the site itself and its immediate environs appear as agricultural land with no evidence of residential or industrial development.

By 1894, Darfield Main Colliery and South Yorkshire Sanitary Tube Works have appeared immediately to west of the site. The site itself appears to remain undeveloped at this time.

By 1904 an 'Old Colliery' is indicated immediately to the south east of the site. Again no site development is shown.

Over subsequent years a large slag heap is indicated immediately to the south and south west of the site, which by 1980 appears to have been organised into a rectangular mound.

The first on site development is shown on the 1962 OS sheet, which appears to show a small terrace of properties. This remains the case until the 1993 OS sheet when a single building replaces the terrace.

4.0 Geology & Mining

4.1 British Geological Survey Records

Inspection of the British Geological Survey Sheet 87 Barnsley (1:50,000 Series, Solid with Drift Edition) indicates the site to lie on the northern extreme of the alluvial deposits associated with the River Dove. Below the alluvium, middle coal measure strata are indicated with a dip to the north east of 1 in 16.

4.2 Coal Authority Report

A Coal Authority Report, obtained as part of the desk study searches for the site, is presented in appendix C to this report.

The most important information is contained in the first paragraph, which states that 'the property is in the likely zone of influence from workings in 10 seams of coal at shallow to 650m depth, and last worked in 1989'.

No opinion is offered regarding the current status of the seams. However, the reference to 'shallow' workings demands further investigation as it raises the possibility for unconsolidated historic workings within influencing distance of the surface.

5.0 Hydrogeology

5.1 The Environment Agency classifies the underlying solid geology beneath the site as a Minor Aquifer. These can be fractured or potentially fractured rocks, which do not have a high primary permeability, or other formations of variable permeability including unconsolidated deposits. Although not producing large quantities of water for abstraction, they are important for local supplies and in supplying base flows to rivers.

5.2 The anticipated site geology is likely to be classified as having a high leaching potential.

5.3 The site is not located within a Source Protection Zone.

5.4 The nearest surface water feature is located approximately 225m south of the site, namely the River Dove.

5.5 The nearest listing for River Quality is shown 230m south. A stretch of the River Dearne was classified as River Quality C in 2000.

5.6 The nearest Discharge Consent is located 323m from the site. The operator is Yorkshire Water Services Ltd for storm sewage overflow discharges into the River Dove.

5.7 The nearest abstraction license is 342m for British Coal at a distance of 342m from the site.

5.8 The closest Pollution Incidents to Controlled Waters is listed at 194m south of the site.

6.0 Hydrology

6.1 Surface water features

The closest surface water feature is the River Dove which is approximately 0.25km south of the site.

The Agency and Hydrological (Flood) map contained in appendix B indicates widespread flooding associated with the River Dove but this stops wells short of the property boundaries.

7.0 Environmental Setting

7.1 Landfill and Waste

- The nearest BGS recorded landfill site is 877m south of the site.
- The nearest historical landfill site is identified at 255m south of the site at Station Road Industrial Estate.
- The nearest local authority recorded landfill site is 253m south of the site.
- A Licensed Waste Management Facility is recorded 462m southeast of the site. The site category is shown as treatment-biological.
- A Registered Waste Transfer site is shown 138m east of the site at Hope Street.

7.2 Industrial Land Use

- The site itself has a history of use as a garage which in itself has associated potential for ground contamination. Immediately without the site, there is a considerable history of industrial development which also points to the potential for land contamination.

7.3 Radon

- The Envirocheck searches indicate that the property is in a Radon Affected Area.
- Reference has also been made to BRE 211 which indicates that the property is in an area where there is a geological risk of Radon gas production.

8.0 Preliminary Geotechnical Assessment

8.1 Relict Foundations and Made Ground

Given the site history and location, some made ground is expected. A phase 2, intrusive, investigation would determine the type and extent of made ground.

8.2 Excavations and Groundwater

At the base of any made ground, localised alluvial deposits may be encountered above mudstone, sandstones and shales. There is no evidence to suggest that groundwater will be encountered at shallow depth.

8.3 Mining

From the Coal Authority report, it would appear that there is the possibility of shallow mine workings beneath the property. A phase 2 intrusive ground investigation will be necessary in order to evaluate this risk.

8.4 Foundations

Foundation options will depend to a large extent on the depth and nature of any made ground and superficial deposits about the solid geology.

In addition, a full evaluation of mining issues will be necessary before any firm conclusions can be reached.

9.0 Preliminary Contamination Assessment

9.1 Given the previous use of the site and adjacent sites, there is a potential for residual ground contamination. The potential is evaluated in greater detail in appendix D, where a phase 1 conceptual site model is developed.

9.2 A sensitive end use for the site is proposed comprising private residential properties with associated hard standings and parking along with residential gardens.

9.3 In order to assess an appropriate remediation strategy for the site, it will be necessary to carry out a phase 2, intrusive, investigation to gather data on the chemical composition of any contaminants. This data will then be assessed against current standards for '*residential gardens with possible plant uptake*'.

9.4 Testing should be based on guidance in CLR Report 8 'Potential Contaminants for the assessment of land'.

9.5 Given the proximity of the site to known potential ground gas sources, including landfills and the natural coal measures

geology, it is recommended that ground gas monitoring be undertaken.

9.6 On the basis of the available information, it is recommended that Basic Radon protection should be provided in accordance with the requirements of BRE 211.

10.0 Recommendations for Further Work

10.1 Phase 2 Intrusive Investigation

In view of the findings of this study; it is recommended that a phase 2 intrusive ground investigation be carried out to include the following elements of work, as a minimum:

- Geotechnical assessment of shallow geology including made ground and superficial deposit.
-
- Mining investigation to evaluate the presence and status of coal workings within influencing distance of the surface.
- Contamination assessment of made ground, including asbestos screening.
- Land gas monitoring.

Based on the findings of the intrusive survey, detailed recommendations will be required for foundations and ground slabs, land gas protection and a remediation strategy.

Introduction

The Environment Act 1995 has made site sensitivity a key issue, as the legislation pays as much attention to the pathways by which contamination could spread, and to the vulnerable targets of contamination, as it does the potential sources of contamination.
For this reason, Landmark's Site Sensitivity maps and Datasheet(s) place great emphasis on statutory data provided by the Environment Agency and the Scottish Environment Protection Agency; it also incorporates data from Natural England (and the Scottish and Welsh equivalents) and Local Authorities; and highlights hydrogeological features required by environmental and geotechnical consultants. It does not include any information concerning past uses of land. The datasheet is produced by querying the Landmark database to a distance defined by the client from a site boundary provided by the client.

In the attached datasheet the National Grid References (NGRs) are rounded to the nearest 10m in accordance with Landmark's agreements with a number of Data Suppliers.

BGS Boreholes Summary

Data Type	Page Number	On Site	0 to 250m	251 to 500m	501 to 1000m
BGS Boreholes	pg 1	None	2	20	20

Introduction

The Environment Act 1995 has made site sensitivity a key issue, as the legislation pays as much attention to the pathways by which contamination could spread, and to the vulnerable targets of contamination, as it does the potential sources of contamination.
For this reason, Landmark's Site Sensitivity maps and Datasheet(s) place great emphasis on statutory data provided by the Environment Agency and the Scottish Environment Protection Agency; it also incorporates data from Natural England (and the Scottish and Welsh equivalents) and Local Authorities; and highlights hydrogeological features required by environmental and geotechnical consultants. It does not include any information concerning past uses of land. The datasheet is produced by querying the Landmark database to a distance defined by the client from a site boundary provided by the client.

In the attached datasheet the National Grid References (NGRs) are rounded to the nearest 10m in accordance with Landmark's agreements with a number of Data Suppliers.

Yorkshire

Published 1854 - 1855

Source map scale - 1:10,560

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840`s. In 1854 the 1:2,500 scale was adopted for mapping urban areas; these maps were used to update the 1:10,560 maps. The published date given therefore is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas. In the late 1940`s, a Provisional Edition was produced, which updated the 1:10,560 mapping from a number of sources. The maps appear unfinished - with all military camps and other strategic sites removed. These maps were initially overprinted with the National Grid. In 1970, the first 1:10,000 maps were produced using the Transverse Mercator Projection. The revision process continued until recently, with new editions appearing every 10 years or so for urban areas.

In the late 1940's, a Provisional Edition was produced, which updated the 1:10,560 mapping from a number of sources. The maps appear unfinished - with all military camps and other strategic sites removed. These maps were initially overprinted with the National Grid. In 1970, the first 1:10,000 maps were produced using the Transverse Mercator Projection. The revision process continued until recently, with new editions appearing every 10 years or so for urban areas.

Large-Scale National Grid Data

Published 1994

Source map scale - 1:1,250

'Large Scale National Grid Data' superseded SIM cards (Ordnance Survey's 'Survey of Information on Microfilm') in 1992, and continued to be produced until 1999. These maps were the fore-runners of digital mapping and so provide detailed information on houses and roads, but tend to show less topographic features such as vegetation. These maps were produced at both 1:2,500 and 1:1,250 scales.

Supply of Unpublished Survey Information

Published 1974

Source map scale - 1:2,500

SUSI maps (Supply of Unpublished Survey Information) were produced between 1972 and 1977, mainly for internal use at Ordnance Survey. These were more of a 'work-in-progress' plan as they showed updates of individual areas on a map. These maps were unpublished, and they do not represent a single moment in time. They were produced at both 1:2,500 and 1:1,250 scales.

Source map scale - 1:2,500

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840's. In 1854 the 1:2,500 scale was adopted for mapping urban areas and by 1896 it covered the whole of what were considered to be the cultivated parts of Great Britain. The published date given below is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas.

This report is for the property described in the address below and the attached plan.

Coal and Brine Report

Site At, Pitt Street, Wombwell, Barnsley, South Yorkshire

This report is based on and limited to the records held by, the Coal Authority, and the Cheshire Brine Subsidence Compensation Board's records, at the time we answer the search.

Coal mining	Yes
Brine Compensation District	No

Information from the Coal Authority

Underground Coal Mining

Past

The property is in the likely zone of influence from workings in 10 seams of coal at shallow to 650m depth, and last worked in 1989.

Present

The property is not in the likely zone of influence of any present underground coal workings.

Future

The property is not in an area for which the Coal Authority is determining whether to grant a licence to remove coal using underground methods.

The property is not in an area for which a licence has been granted to remove coal using underground methods.

All rights reserved. You must not reproduce, store or transmit any part of this document unless you have our written permission.

© The Coal Authority

The property is not in an area that is likely to be affected at the surface from any planned future workings.

However reserves of coal exist in the local area which could be worked at some time in the future.

No notice of the risk of the land being affected by subsidence has been given under section 46 of the Coal Mining Subsidence Act 1991.

Mine entries

There are no known coal mine entries within, or within 20 metres of, the boundary of the property.

Coal-mining geology

The Authority is not aware of any evidence of damage arising due to geological faults or other lines of weakness that have been affected by coal mining.

Opencast Coal Mining

Past

The property is not within the boundary of an opencast site from which coal has been removed by opencast methods.

Present

The property does not lie within 200 metres of the boundary of an opencast site from which coal is being removed by opencast methods.

Future

The property is not within 800 metres of the boundary of an opencast site for which the Coal Authority is determining whether to grant a licence to remove coal by opencast methods.

The property is not within 800 metres of the boundary of an opencast site for which a licence to remove coal by opencast methods has been granted.

Coal-mining subsidence

The Coal Authority has not received a damage notice or claim for the property since 1 January 1984. There is no current Stop Notice delaying the start of remedial works or repairs to the property.

The Authority is not aware of any request having been made to carry out preventive works before coal is worked under section 33 of the Coal Mining Subsidence Act 1991.

Mine gas

There is no record of a mine gas emission requiring action by the Coal Authority within the boundary of the property.

Hazards related to coal mining

The property has not been subject to remedial works, by or on behalf of the Authority, under its Emergency Surface Hazard Call Out procedures.

Withdrawal of Support

The property is in an area for which notices of entitlement to withdraw support were published in 1983,1946.

The property is not in an area for which a notice has been given under section 41 of the Coal Industry Act 1994, revoking the entitlement to withdraw support.

© The Coal Authority

Working Facilities Orders

The property is not in an area for which an Order has been made under the provisions of the Mines (Working Facilities and Support) Acts 1923 and 1966 or any statutory modification or amendment thereof.

Payments to Owners of Former Copyhold Land

The property is not in an area for which a relevant notice has been published under the Coal Industry Act 1975/Coal Industry Act 1994.

Comments on Coal Authority information

In view of the mining circumstances a prudent developer would seek appropriate technical advice before any works are undertaken.

Therefore if development proposals are being considered, technical advice relating to both the investigation of coal and former coal mines and their treatment should be obtained before beginning work on site. All proposals should apply good engineering practice developed for mining areas. No development should be undertaken that intersects, disturbs or interferes with any coal or mines of coal without the permission of the Coal Authority. Developers should be aware that the investigation of coal seams/ former mines of coal may have the potential to generate and/or displace underground gases and these risks both under and adjacent to the development should be fully considered in developing any proposals. The need for effective measures to prevent gases entering into public properties either during investigation or after development also needs to be assessed and properly addressed. This is necessary due to the public safety implications of any development in these circumstances.

Information from the Cheshire Brine Subsidence Compensation Board

The property lies outside the Cheshire Brine Compensation District.

Additional remarks

This report is prepared in accordance with the Law Society's Guidance Notes 2006, the User Guide 2006 and the Coal Authority and Cheshire Brine Board's Terms and Conditions 2006. The report is compliant with Home Information Pack requirements.

The Coal Authority owns the copyright in this report. The information we have used to write this report is protected by our database right. All rights are reserved and unauthorised use is prohibited. BRIGHT YOUNG CONSULTING

Appendix D Conceptual Site Model

BRIGHT YOUNG CONSULTING

Phase 1 Conceptual Site Model

Source	Pathway	Receptor	Matrix Assessment	Justification
Potentially contaminated soils	Geology (vertical migration through permeable deposits below the site).	Controlled Waters	**Low to moderate Risk**	Natural ground likely to be impermeable. To be confirmed by intrusive investigation.
Potentially contaminated soils	Direct contact/ingestion and inhalation of dust and vapours	Human Health	**Moderate Risk**	Previous uses both on and adjacent to site suggest potential for contaminated ground.
Potentially contaminated soils	Direct contact and leaching	Buildings and Structures	**Moderate Risk**	Previous uses both on and adjacent to site suggest potential for contaminated ground.
Potential ground gas	Vertical and lateral migration	Human Health	**Moderate to High Risk**	Adjacent slag heap and previous mining history indicates potential for land gas generation.

RISK DEFINITIONS

Consequence to Receptor Definition Matrix

	Human Health	Controlled Waters	Buildings/Services
Severe Consequences	Acute or chronic permanent impact on human health	Sensitive controlled water pollution ongoing, or just about to occur.	Catastrophic collapse
Moderate Consequences	Chronic permanent impact on human health	Gradual pollution of sensitive controlled waters	Degradation of materials
Mild Consequences	Chronic temporary impact on human health	Gradual pollution of non-sensitive controlled waters	Noticeable change, non structural

Standard Risk Matrix

	Severe Consequences	Moderate Consequences	Mild Consequences
Higher Probability	Very High Risk	High Risk	Medium Risk
Median Probability	High Risk	Medium Risk	Low Risk
Lower Probability	Medium Risk	Low Risk	Very Low Risk

Probability Definitions

Probability	**Definition in context**
Higher	Positive evidence of hazard, pathway and receptor
Median	Suspected hazard, pathway and receptor
Lower	No evidence of hazard, pathway and receptor

Risk Rank Definitions

Rank	**Definition in context**
Very High Risk	Demonstrable contaminated land situation. Highest threat and liability level. Urgent action recommended.
High Risk	Likely contaminated land situation. Risk assessment and action recommended.
Medium Risk	Plausible contaminated land situation. Risk assessment and possible action recommended.
Low Risk	Unlikely contaminated land situation. Possible risk assessment and possible action recommended.
Very Low Risk	Negligible risk. No action recommended except vigilance for changes in conditions.
