Design & Access Statement

Two polytunnels 7.4m x 27.5m (outside measurements)

Galvanised steel frame, UV stabilised polythene sheet covering, timber ends.

The polytunnels will have footings cemented into the ground. The floor space inside will be the soil currently in place. The structures are to be used for growing vegetable crops as part of a Big Lottery funded Local Food Fund project by Heeley City Farm.

The structures are identical to the one already in place both for practical and appearance considerations, and will be sited symmetrically in line with the existing tunnel.

One small polytunnel 7.3m x 3.6m

Galvanised steel frame, UV stabilised polythene sheet covering, timber ends. The structure will have footings cemented into the ground.

The floor space will be the existing tennis court surface. Staging will furnish the tunnel for the purpose of propagating vegetable seedlings.

The tennis court has for many years been covered in wild trees, mainly saplings of ash, sycamore and willow/sallow which have rooted through and broken up much of the surface. We cleared most of this away four years ago, and wish to make some practical use of this area.

Access to the walled garden is via private road within Wortley Hall grounds. The grass paths in the garden shall remain, so there shall be no changes to access.
