1.0 INTRODUCTION

1.1 The proposed school site is located on land off the A633 Wombwell Bypass as shown in Appendix A. The new school site is approximately 1.8km north of Wombwell High School and 3.2km south west of Foulstone High School by road.

1.2 The site boundaries are as follows:

North – Netherwood Road and Pitt Street
South – A633 Wombwell Bypass
East – Residential Development off Station Road
West – Public Footpath / Netherwood Country Park

1.3 The A633 extends north west to south east past the town of Wombwell. The initial section of the Wombwell Bypass is named as "Mitchells Way" and begins at the roundabout of the A633/Bradberry Balk Lane/Barnsley Road and continues to the roundabout of the A633/Station Road. For simplicity and clarification this initial section of bypass will be referred to as "The Wombwell Bypass" throughout this report. This stretch of carriageway is currently plated as a 50mph speed limit and is of single carriageway construction. The bypass is lit and has no footways adjacent to the carriageway for its total length.

1.4 An indicative layout plan can be found in Appendix B. The plan illustrates how the site could be developed with the details to be agreed at the detailed planning application stage. The plan shows the location of the new school access off the A633 Wombwell Bypass.

The remainder of the layout is subject to development. The new school capacity will be 1800 pupils. The new school provision will replace the existing Wombwell High School and Foulstone High School situated off Roebuck Street, Wombwell and Nanny Marr Road, Darfield respectively.

2.0 EXISTING CONDITIONS

2.1 Wombwell High School

2.1.1 Wombwell High School is located within the existing residential area of Wombwell off Roebuck Street approximately 1.0km walking distance south of Wombwell Town Centre. The school location is shown in Appendix I.

2.1.2 The geographical location of students is shown on a plan at Appendix C. The vast majority of students which currently attend Wombwell High reside within the village of Wombwell on the south side of the Wombwell bypass. Others clusters can be seen at Brampton and Jump.

2.1.3 Pedestrian access to the school from the surrounding areas is very good with wide footways leading towards the school through the existing residential area. In addition, there is also a bus drop off/pick up facility situated south east of the school, off Lundhill Road, with a pedestrian footway link through a field. The length of this footway is approximately 220m long. Further information on public transport is discussed in the Public Transport section of this report.

2.1.4 It is considered that the improvements in pedestrian, cyclist and vehicular facilities suggested within this report as part of the proposed development will cater for and allow those wishing to travel to the proposed school by more environmentally sustainable modes of transport to do so as safely and easily as possible.

2.2 Foulstone High School

2.2.1 Foulstone High School is located off Nanny Marr Road, Darfield, Barnsley approximately 2.4km north of Wombwell town centre. The location of this existing school is shown in Appendix I.

2.2.2 The geographical location of the Foulstone High students is shown on a plan at Appendix C. The vast majority of students which attend this school currently reside in Darfield and Great Houghton with other clusters in Thurnscoe and Goldthorpe.

2.2.3 Pedestrian access to the school from the surrounding areas is very good with wide footways (which follow the existing highway network), well lit and overlooked by the surrounding residential area. There is public transport provision immediately outside the school in the form of a full width bus layby for the pick up and drop off of students. Further information on public transport is discussed in the Public Transport section of this report.

2.2.4 Travel mode survey information has been provided for both the Wombwell and Foulstone High School. Information on transport modal split as derived from a survey carried out in October 2005 is summarised as follows:-.

	Foulstone High School	Wombwell High School
Percentage	To School	To School
Walk	38	73
Cycle	0	1
Bus	46	12
Car	12	10

Car Share	4	3
Other	0	1
Total %	100%	100%

	Foulstone High School	Wombwell High School
Percentage	From School	From School
Walk	39	75
Cycle	0	1
Bus	48	12
Car	10	8
Car Share	3	2
Other	0	2
Total %	100%	100%

	Foulstone High School	Wombwell High School
Percentage	Would like to	Would like to
Walk	19	38
Cycle	23	14
Bus	30	8
Car	17	21
Car Share	2	6
Other	9	13
Total %	100%	100%

2.2.5 It should be noted that Foulstone High School had no cycle parking at the time of undertaking the survey. The existing travel patterns of both school sites show that there are a higher percentage of pupils walking to Wombwell High School than walking to Foulstone High School. This is possibly due to Wombwell High's location within a predominantly residential area and Foulstone High School is more accessible on main roads from the wider surrounding area.

2.2.6 The survey also identifies the potential level of pupils wishing to travel to school by alternative modes of transport should the opportunities

and facilities exist to help them accomplish their ideal trip to and from school. The survey shows an increase in the likelihood of pupils traveling to school by cycle, a similar amount traveling by bus and an increase in the number of pupils traveling by car.

3.0 PERSONAL INJURY ACCIDENTS

3.1 Accident data for the period between 01/09/2002 and 31/08/2007 has been obtained from Barnsley Metropolitan Borough Council for the area within the vicinity of the proposed school site off the A633 Wombwell bypass, the length of Station Road, Pitt Street, Bradberry Balk Lane, and High Street. The data has been summarised dealing with the individual streets studied in turn. An accident plot diagram identifying the study area together with the full accident data is shown in Appendix E.

3.2 There have been some clusters of accidents, mainly at the major junction intersections such as the Bradberry Balk Lane roundabout, Station Road roundabout. All of the accidents have been assessed in the following sections.

3.3 A633 Wombwell Bypass

3.3.1 In relation to the new school site, the A633 Wombwell bypass runs east to west, between the roundabout junctions of Bradberry Balk Lane and Station Road, approximately 750m south of the new school site. Between 01/09/2002 and 31/08/2007, 6 accidents occurred on The Wombwell bypass between the roundabout junctions of Bradberry Balk Lane and Station Road. This is an approximate length of 1200m.

3.3.2 Of the 6 accidents, 1 occurred in 2003, 1 in 2004, 3 in 2005 and 1 in 2007 all of which have been classed as slight. Of these accidents, 3 occurred at or very near to the priority junction of Littlefield Lane.

3.3.3 Accident B-00497-07 was slight in severity and occurred on Littlefield Lane, approximately 25m from the junction with the A633 Wombwell bypass. The accident involved a pedal cyclist riding along Littlefield Lane when a vehicle approaching caused the rider to unbalance and fall. The accident occurred on Wednesday 11th April 2007 at 13:05 hrs in dry conditions. This accident appears to be as a result of excessive speed and a disregard for other road users.

3.3.4 Accident B-01308-05 was slight in severity and occurred on the A633 Wombwell bypass at the junction of Littlefield Lane and involved a 13 year old male pedestrian running into the path a moving vehicle. The accident occurred on Tuesday 20th September 2005 at 11:30 hrs in dry conditions. This accident appears to be as a result of an injudicious decision.

3.3.5 Accident B-00602-05 was slight in severity and also occurred on the A633 Wombwell bypass at the junction of Littlefield Lane in similar circumstance to the above. A pedestrian crossed the road in front of a vehicle travelling towards Barnsley and a collision occurred. The accident occurred on Friday 6th May 2005 at 17:15 hrs in dry conditions. This accident appears to be as a result of an injudicious decision given that visibility for pedestrians along the bypass at this point is good.

3.3.6 However, a contributory factor of both of the above pedestrian accidents is that the bypass currently has a high speed limit of 50mph which is not conducive to the safe crossing of pedestrians particularly where there are no controlled pedestrian crossing facilities. Drivers may not be expecting pedestrians to cross on what is a straight, fast and detached bypass road.

3.3.7 The proposed mitigation measures at this junction include the implementation of a controlled 'Toucan' crossing on the bypass at the existing crossing point. High friction anti-skid red surfacing is also proposed on the approaches to the crossing which will be within a clearly marked and signposted 'School Zone'. In addition the current speed limit will be reduced within the vicinity of the crossing from 50mph to 30mph. These mitigation measures will provide a much enhanced and safer environment for the level of pupils which are expected to cross the Wombwell bypass once the proposed school site is established. None of the accidents which occurred at the Littlefield Lane / Wombwelll bypass junction occurred during the recognised school peak hours of 08:00 – 09:00 and 15:00 – 16:00.

3.3.8 The remaining 3 accidents occurred on the Wombwell bypass itself. Accident B-00813-04 was slight in severity and occurred approximately 400m from Barnsley Road and involved a vehicle experiencing a tyre blow out and colliding with a pedal cyclist. The accident occurred on Tuesday 15th June 2004 at 16:55 hrs in dry conditions. It is evident that this accident was caused by a mechanical failure.

3.3.9 Slight accident E-00067-03 on the Wombwell bypass approximately 500m from the Station Road roundabout and involved a vehicle which swerved to avoid a parked car and a vehicle travelling in the opposite direction, losing control, mounting the kerb and coming to rest in a ditch. The accident occurred Monday 20th January 2003 at 18:15 hrs in wet and dark conditions. The Wombwell bypass is currently lit and this accident is possibly due to excessive speed.

3.3.10 Accident B-00637-05 appears to have been logged in error and actually occurred outside of the accident study area on Parkland View some 5km north of the proposed school site.

3.4 A633 Barnsley Road / Bradberry Balk Lane / Barnsley Road Roundabout

3.4.1 The above roundabout is situated to the west of the proposed school site and is one of the major intersections within the vicinity of the site. Between 01/09/2002 and 31/08/2007, 6no. accidents have occurred at this roundabout junction. Of these 6no. accidents, 1no. accident resulted in a fatality and the remaining 5no. accidents were all slight in severity. A summary of the accidents is given below:

3.4.2 Fatal accident B-01329-04 involved a 57 year old male pedal cyclist negotiating the roundabout, falling from cycle and sustaining a head injury. It is evident that no other vehicle was involved in the accident which occurred at 17:05 on Thursday 30th September 2004 in dry and daylight conditions. No information is available to establish whether the rider was wearing protective cycle head wear.

3.4.3 The remaining 5no. accidents involved 2 pedal cyclist accidents, 2 rear shunts and 1 accident involved overtaking at the roundabout. There are 3 accidents which involve cyclists negotiating this roundabout junction, however the low number of recorded accidents over the past five years does not suggest a particular accident trend. It is has been suggested that there is scope to provide a marked out cycle lane on Barnsley Road given its current width.

3.5 B6086 Station Road / A633 Wombwell Bypass / A633 Valley Way Roundabout

3.5.1 The above roundabout is situated to the south east of the proposed school site and is one of the major intersections within the vicinity of the site. Between 01/09/2002 and 31/08/2007, 7no. accidents have occurred at this roundabout junction. Of these 7no. accidents, 1no. recorded accident was classified as serious and the remaining 6no. accidents were all slight in severity.

3.5.2 Serious accident E-00625-03 involved two vehicles driven by a 21 year old female and a 58 year old man. The accident occurred when a vehicle entered the roundabout from Station Road and another vehicle entered from the Wombwell bypass and a collision occurred. The accident occurred on Sunday 24th August 2003 at 23:30 hrs in dry and dark conditions.

3.5.3 The remaining 6no. accidents involved 4 very similar accidents to the above whereby vehicles collided when opposing each other on the roundabout. An accident also occurred which involved 1 vehicle losing control and mounting the kerb and the remaining accident involved a pedestrian walking into the path of a vehicle.

3.5.4 The low number of accidents which have occurred at this roundabout over the past five years and given that the majority of the accidents are of the type which would be expected at any roundabout, leads to the conclusion that there is no specific and unexpected accident trend at this roundabout junction.

3.6 Further Accident Analysis

3.6.1 Taking the above into account, the remaining 78no. accidents are classified as follows:

- 1no. fatal accident.
- 10no. serious accidents.
- 67no. slight accidents.

3.6.2 Fatal accident E-00945-03 occurred on High Street at its junction with Orchard Street and involved an 81 year old female pedestrian stepping into the carriageway as a bus began to set off from a stationary position at a bus stop. The accident occurred on Sunday 14th December 2003 at 09:40 hrs in wet and daylight conditions.

3.6.3 The 10no. serious accidents recorded are spread over the wide study area. The majority of the accidents have occurred at separate locations with the exception of accidents E-00136-03 and E-00238-03 which both occurred on Nanny Marr Road at the junction with East Street. However the causation of both serious accidents is not the same. Accident E-00136-03 involved a pedestrian stepping into the carriageway and colliding with a vehicle and accident E-00238-03 involved a vehicle turning right into East Street and Colliding with an oncoming vehicle. It is therefore considered that there is no specific accident trend at this particular location.

3.6.4 The remaining 8no. accidents consist of four instances whereby pedestrians step into the carriageway and collide with a vehicle. These accidents occurred at separate locations with no specific accident trend identifiable. Two instances of right turn accidents have been recorded at different locations and two instances of vehicles overtaking and colliding or losing control. Given that these accidents

have occurred in separate locations over a period of five years and covering a vast study area, it is considered that there is no accident problem at any of these locations.

3.6.5 The remaining 67no. slight accidents have been summarised in the following table for easy reference and understanding of the accidents which have occurred within the study area:

Accident Type /Severity	2002	2003	2004	2005	2006	2007	Total
	Slight	Slight	Slight	Slight	Slight	Slight	
Child runs into road	1	1		1	2		5
Ped on Xing	1	1	1				3
Right turn	1	2	4	2			9
Overtaking				1			1
Head on collision on bend	1		1				2
Ped stepped into road	1	3		4			8
Boarding PSV		1					1
Fell from PSV		2					2
Police Pursuit		1					1
Wrong side of contraflow			1				1
Pulled out of junction			1	1			2
Rear shunt			3	4	4	1	12
Head on collision			1				1
Cyclist			2			1	3
Loss of control			2	3	1		6
Loss of control on Ice			1				1
Reversing			1			1	2
Collision due to handbrake left off					1		1
Jacknifed trailer						1	1
Other			1	1	2	1	5
Total	5	11	19	17	10	5	67

Remaining 67no. Slight Accidents Within the Study Area.

3.6.6 Of the remaining 67 accidents which have occurred within the study area, the most frequently occurring type of accident is the 'rear shunt' closely followed by 'right turn accidents', which is what would be

expected given the number of junctions within the vast study area. 8no. accidents involved pedestrians stepping into the road and 5no. accidents involved children running into the road. The majority of these pedestrian, including child, accidents occurred as a result of either running or walking into the carriageway between parked vehicles.

3.6.7 It should be noted that there have been no recorded accidents at the junction of Pitt Street/Station Road from where pedestrian and cyclists traveling from the north and east of the site will be routed toward the school and access the site via traffic free pedestrian/cyclist footways situated on the site frontage with Pitt Street. These accesses can be seen on drawing 4071/002A at Appendix J.

3.6.8 The accidents which have occurred in such a vast study area is relatively low in both number and severity. The highway mitigation measures which are proposed as part of this development will provide a much enhanced and safer environment for the level of pupils which are expected to visit the proposed school site.

4.0 EXISTING HIGHWAY SITUATION

4.1 A633 Wombwell Bypass

4.1.1 Traffic survey information was requested from Barnsley Metropolitan Borough council for the Wombwell bypass. A permanent volumetric vehicle counter is currently installed on the A633 Wombwell Bypass and as such only records the total volumes of traffic over a 24 hour period in hourly intervals. Therefore the survey information received does not differentiate between the classifications of vehicles and as a result total vehicles with an estimation of HGV numbers have been assumed. A summary of the count data can be found at Appendix D. Peak hour summary flow diagrams can also be found at Appendix L.

4.1.2 The Wombwell bypass forms an alternative route to travelling through the town centre of Wombwell. The bypass runs between the roundabouts at Station Road and Bradberry Balk Lane.

4.1.3 The A633 Wombwell bypass ranges in width between approximately 7.3m and 7.6m. Pedestrian facilities are limited on the bypass because of the nature of the road, however, a footway does link the Station Road roundabout to Littlefield Lane which is set back behind vegetation and is unlit and not overlooked. Therefore these pedestrian facilities are not currently recommended as a safe route for pedestrians including students.

4.1.4 The northern section of Littlefield Lane forms a priority junction with the Wombwell Bypass approximately 400m west of the Station Road roundabout and enables pedestrian access to the Trans Pennine Trail

from Wombwell town centre via a dropped crossing on the bypass directly opposite the Littlefield Lane junction.

4.1.5 Stretching from Southport to Hornsea and from Leeds to Chesterfield, the Trans Pennine Trail passes through a wide range of urban and rural environments including national parks, industrial heritage areas, coastlines and city centers. The Trans Pennine Trail is mapped and signed all the way, mainly traffic free and is surprisingly level considering the dramatic scenery along the way. Easy gradients and surfaced paths make many sections suitable for families, gentle exercise and people using wheelchairs, pushchairs and bicycles.

4.1.6 The initial pedestrian route on Littlefield Lane is hard surfaced, lit and overlooked up until the Trans Pennine Trail commences. The Trans Pennine Trail within the immediate vicinity of the site and thereon is currently grass/crushed stone surfaced, unlit, and not overlooked. Expected pedestrian routes and mitigation measures to improve the quality of these routes are discussed further within this report.

4.2 B6086 Station Road / A633 Wombwell Bypass / A633 Valley Way Roundabout

4.2.1 The above roundabout is a five arm roundabout linking Station Road and Valley Way with the Wombwell bypass. A newly constructed residential development, Mayflower Gardens, forms the fifth arm to the roundabout and also forms a link to Park Street to the south.

4.2.2 This roundabout junction is a key intersection for the following destinations:

- Northeast – Darfield

- Southeast – Brampton / Wath upon Dearne
- Southwest – Hoyland / Worsborough / M1
- West – Ardsley / Barnsley

4.2.3 The A633 Valley Way also forms part of the Wombwell Bypass and is subject to a 50mph speed limit with a carriageway width of approximately 7.9m and provides a vehicular link to/from Brampton and Wath upon Dearne. A single footway of approximately 1.5 - 1.8m runs part of the length of Valley Way from the above roundabout to the junction of Everill Gate Lane.

4.2.4 The Station Road arm of the roundabout extends northeast toward Darfield. This 2.5km length of highway is subject to a 30mph speed limit. Station Road, which extends southwest toward High Street, provides two way access for part of its length to the public car park. However the remainder of this road is prohibited to all traffic from the roundabout with the exception of buses which can travel from the roundabout along the full length of Station Road to High Street. Bus shelters are located on Station Road for services travelling south west.

4.2.5 All arms have pedestrian dropped crossings and footways leading to the roundabout from the surrounding areas.

4.3 A633 Barnsley Road / Bradberry Balk Lane / Barnsley Road Roundabout

4.3.1 The above roundabout is a four arm roundabout linking Bradberry Balk Lane and Barnsley Road with the Wombwell bypass. Barnsley Road and Bradberry Balk Lane are subject to 30mph speed restrictions and

the A633 Barnsley Road is subject to a 40mph speed limit. Following the initial section near the roundabout of 30mph.

4.3.2 This roundabout junction is a key intersection for the following destinations:

- Northeast – Darfield
- Northwest – Barnsley
- Southeast – Wombwell / Brampton / Wath upon Dearne
- South – Wombwell

4.3.3 All arms have pedestrian dropped crossings and footways leading to the roundabout from the surrounding areas.

4.3.4 Bradberry Balk Lane extends north east and subsequently changes in name to Netherwood Road and Pitt Street. This 1.7km length of highway extends north east from the above roundabout and runs along the rear of the proposed development site. The initial section, named Bradberry Balk Lane has a carriageway width of approximately 7.9m with a single footway some 2m wide. However, further along the length of Bradberry Balk Lane, the footway becomes intermittent and the carriageway begins to narrow in places, particularly on the approach to the bridge near property No. 96, to approximately 5m with no footways. Bradberry Balk Lane is lit to a main road standard and is subject to a 30mph speed restriction.

4.3.5 Barnsley Metropolitan Borough Council Engineers have expressed that they would not like to see any additional vehicular traffic movements on this road as a result of the proposed development, particularly due to the sub standard nature of the Pitt Street / Station Road junction. Therefore no vehicular access is to be proposed from this road at the rear of the site.

4.3.6 Bradberry Balk Lane also provides access to an existing public car park which serves Netherwood Country Park. The car park is not hard surfaced or lit. The Trans Pennine Trail is also accessible from Bradberry Balk Lane.

5.0 PUBLIC TRANSPORT

The bus services which operate in Barnsley have been studied to assess the services available to the existing school sites at Wombwell and the Darfield School sites and the proposed site off the Wombwell by-pass. The full bus service data is included in Appendix F and has been summarised below.

5.1 Wombwell High School

5.1.1 There are 10 bus services, which serve Wombwell High School that form part of the general bus network. There are no specific home-to-school services which serve the school.

5.1.2 Service numbers 40 (formerly no.60), 67, 68, 68A, 69, 222, 223, 226, 228 and 229 all operate approximately 600m north of the existing school site and its outlying areas, mainly to the south and south east of Barnsley. Many of these services also extend to towns and villages outside of the Barnsley Metropolitan area.

5.1.3 The above buses do not directly serve Wombwell High School. The nearest these services come to Wombwell High is approximately 600m walking distance north, within Wombwell town centre. All of these services, with the exception of service no. 40, operate within the morning and evening school peak periods and throughout the school day.

5.2 Foulstone High School

5.2.1 There are five bus services that form part of the general bus network in Barnsley that provide access to the existing Foulstone School. There are also 5 specific home-to-school services.

5.2.2 The 68, 68A, 69, 218, and 219 all access the existing school and predominantly travel to and from the south and south east of Barnsley. All of the above services currently operate within the morning and evening school peak periods and throughout the school day.

5.2.3 Service X19 in an express service which only operates on Doncaster Road passed Foulstone High and provides access to/from Barnsley, Goldthorpe, Doncaster and Cantley.

5.3 Proposed School Site

5.3.1 It is evident that services 67, 68, 68A, 69, 222, 223, 226, 228 and 229 do operate within the vicinity of the site, with the closest being the existing services traveling on Station Road, Barnsley Road and through Wombwell town centre.

5.3.2 Whilst buses do travel along the A633 Barnsley Road, the majority turn right at the A633 Barnsley Road / Bradbury Balk Lane / Mitchells Way Roundabout and are routed through the town centre of Wombwell. Other services turn right before this roundabout via the residential streets of either Wilson Street or Aldham House Lane. Buses from the south travel via Park Street into Wombwell town centre.

5.3.3 There are no bus stops on the A633 Wombwell Bypass in the immediate vicinity of the proposed school access. There are stops on Station Road, however, the relevant services for the school site stop some distance from the proposed school access.

5.3.4 It is proposed that the new school site will have provision within the site for buses to drop off and pick up pupils together with an on site bus turn around facility to allow buses to enter, turn and leave the site in a forward gear. It is also recommended that these bus stops are provided with bus boarding kerbs and shelters to give an enhanced environment for those pupils traveling to the new school by bus. The details of this can be agreed at the appropriate stage.

5.3.5 Should the proposed school site be granted permission it is considered that there is scope for the existing normal network bus services and the home-to-school services to be re-routed to provide a service for pupils travelling to the proposed site within the morning and evening school peak periods. At all other times during the day, the bus services would resume there normal route. It should also be borne in mind that it is unlikely that any home-to-school services will be required to the existing Foulstone and Wombwell School site if the proposed site is granted permission.

5.4 Discounted Fares

5.4.1 Discounted fares are available to all students between the ages of 11 and 18 in South Yorkshire. Students aged between 11 and 16 are issued with a 'Mega Travel Card' which enables all journeys in South Yorkshire at a cost of 40p. Full time students aged between 16 and 18 are also entitled to the same fare cost of 40p.

5.4.2 Pupils who live more than 3 miles away from the nearest available school are entitled to free travel to and from school (Zero Fare Pass). For pupils under 8 years old this distance is 2 miles.

5.4.3 Following discussions with SYPTE, the home-to-school services to the proposed new school site will be reviewed as a matter of course to reassess the school catchment areas and the eligibility of pupils to receive free bus travel.

5.4.4 The details of Home to School Transport is provided in the brochure included in Appendix G.

5.5 Public Transport Summary

5.5.1 Whilst there are a number of services which operate within the area of the proposed new school site at the Darfield / Wombwell site, it is evident that services are limited which are conducive with the start and end of the school day.

5.5.2 There are a large number of home-to-school services to the existing Foulstone School which it is considered should be rerouted to the proposed new school as part of the development and further reviewed to asses any additional requirements.

5.5.3 The proposed school site would provide an area within the site where buses will drop off and pick up pupils. This facility is proposed to be situated within the school grounds approximately 100m from the proposed school building.

6.0 EFFECTS DURNG CONSTRUCTION

6.1 Construction Traffic Implications

6.1.1 It is highly unlikely that construction traffic would exceed the maximum traffic generation of the proposed school or the peak hour generations identified.

6.1.2 Construction will increase the number of HGV movements on the local highway network in the short term. Exact figures are not available at this outline stage.

6.1.3 The site is green field and therefore no demolition works are required prior to construction commencing.

6.2 Mitigation

6.2.1 Any piling activities necessary for foundation construction will only be undertaken between the hours of 10:00 – 12:00 and 14:00 – 16:00 Mondays to Fridays, with no piling occurring at weekends or Bank Holidays.

6.2.2 Construction working times will be limited to 08:00 – 13:00 hours on Saturdays with no Sunday or Bank Holiday working.

6.2.3 It is recommended that all construction traffic use the Wombwell by-pass to access the development site. A temporary access may be required or alternatively the access should be built first to allow access to the site.

7.0 MULTI MODAL TRIP GENERATION

7.1 As required in the Department for Transports "Guidance on Transport Assessment", the person trips to the proposed development have been assessed using information contained within the TRICS 2007 (b) database. The TRICS outputs are attached at Appendix K.

7.2 The TRICS database has been used to assess the person trips to the proposed development and the results are summarised below:

Land Use	Assessment Period	No of Pupils	Trip Rates per pupil			Trips for Total Pupils		
			IN	OUT	2-WAY	IN	OUT	2-WAY
Education Secondary	08:00 – 09:00	1800	0.940	0.049	0.989	1692	88	1780
	15:00 – 16:00		0.068	0.750	0.818	122	1350	1472
	00:00 – 24:00		1.650	1.647	3.297	2970	2965	5935

Proposed ALC Wombwell / Darfield: Total Person Trips

7.3 From further data contained within the TRICS database the modal split for the various uses during peak periods and over a 24 hour period has been determined as follows:-

Am Peak Hour Modal Split	2-Way Trip Rate	% Split	No of Trips
Pedestrians	0.417	42	751
Cyclist	0.048	5	86
Public Transport Users	0.288	29	518
Total Vehicle Occupants	0.236	24	424
Total	0.989	100	1779

Pm Peak Hour Modal Split	2-Way Trip Rate	% Split	No of Trips
Pedestrians	0.412	51	742
Cyclist	0.044	5	79
Public Transport Users	0.220	27	396
Total Vehicle Occupants	0.141	17	254

Total	0.818	100	1471

24 Hr Modal Split	2-Way Trip Rate	% Split	No of Trips
Pedestrians	1.526	46	2747
Cyclist	0.116	4	209
Public Transport Users	0.684	21	1231
Total Vehicle Occupants	0.968	29	1742
Total	3.297	100	5929

7.4 The above modal splits can be compared with the travel mode survey information provided for both the Wombwell and Foulstone High Schools. This information is contained in section 2.0 of this report and was originally used within schools Travel Plan.

7.5 It can be seen that a high percentage of school children currently travel to and from Wombwell High School on foot. This being 73% to school and 75% from school, with car travel being 13% and 10% respectively. Bus travel is at 12% to and from Wombwell High School. These figures are possibly due to Wombwell High's location within a predominantly residential area.

7.6 However, the percentage of school children traveling to and from Foulstone High School is lower at 38% and 39% respectively, with car travel being at 16% and 13% respectively. Bus travel is higher at 46% and 48% respectively. These figures are possibly due to Foulstone High School being more accessible on main roads from the wider surrounding area.

7.7 In comparison with the modal splits derived from the TRICS database, as given above, it can be seen that the percentage of pupils predicted to travel to and from the new school site on foot is between 42 – 51%

in the AM and PM peak periods respectively. This is somewhere in between the figures given for both the Wombwell and Foulstone High Schools of 39% and 75% respectively. Given that walking to the new school site will be promoted as part of the proposed development and mitigation measures are proposed to facilitate this and provide safe routes to school, it is considered that the percentage of pupils traveling to and from the new school site on foot is likely to be high, possibly near the percentage of that currently seen at Wombwell High School with the assistance of an effective Travel Plan.

7.8 The percentage of those using the private the car to travel to and from school as given within the TRICS modal splits above ranges from 17 to 24% which is higher than the percentage of users currently traveling to and from the Wombwell and Foulstone High Schools. Therefore it is expected, together with the predicted high level of pupils traveling to/from school by foot, that the percentage of those traveling by car is likely to be lower than the figures given in the TRICS modal split as given above. Therefore the assessment of traffic within the Transport Assessment is considered very robust.

7.9 However, it is considered that the projected level of pedestrian, cyclist and public transport use can be readily accommodated within the proposed provision on the highway network. The proposed mitigation measures for pedestrians, cyclists and public transport users can be seen in section 8.2.7 of this report.

8.0 EFFECTS ON OPERATION

8.1 Safer Routes to School

8.1.1 The Department for Transport published the document "A Safer Journey to School" in July 1999. This guide for School Travel Plans is supported by the Department for Education and Employment and endorsed by the Department of Health and Sustrans.

8.1.2 Safer Routes to School is the centrepiece of the Governments transport proposals for schools and takes account of integrated transport policy to reduce car dependency, particularly for short journeys such as the 'School Run'.

8.1.3 A good safer routes to school scheme should:

- Follow the routes which are already used by pupils (including popular 'short cuts'), as much as possible rather than going the long way round.
- Provide continuous routes which extend far enough from the school in different directions to serve the majority of pupils.
- Avoid conflict with traffic, using traffic free routes, traffic calming or a combination of both.
- Provide routes which are wide and lit where possible. Pavements are likely to become crowded because children prefer to travel in company.

8.1.4 Minor changes in road design can make an environment around a school more inviting for cyclists and walkers. Creating safer crossing places, slowing down traffic and giving more space and priority to pedestrians and cyclists will create an enhanced environment and encourage a modal shift in travel patterns. Measures may be needed to tackle danger spots and create a 'safety zone' around the school. The whole effect is an area where walking and cycling is not only safer, but easier and more enjoyable.

8.1.5 The following sections investigate sustainable integrated transport and makes recommendations for improvements taking account of the design principles as set out in Safer Routes to Schools.

8.1.6 A School Travel Plan is a series of practical steps for improving children's safety on the school journey. This project has potential benefits for both the school and the wider community. It aims to:-

- Reduce accidents and danger on the journey to school
- Provide an interesting focus for classwork within the national curriculum
- Improve children's health and safety through walking and cycling.
- Give children the opportunity to have their say in decisions which affect them.
- Equip children with better road awareness and give them familiarity with public transport.

- Enable parents and children to choose walking, cycling, and public transport with confidence.
- Build links within the whole school community.
- Make the area around the school safer and more enjoyable for everyone.

8.1.7 The new school site would provide the opportunity for both Wombwell High School and Darfield Foulstone School to implement a combined Travel Plan which sets out initiatives and targets for sustainable transport.

8.1.8 Both the Wombwell and Foulstone High Schools currently operate Travel Plans and the combination of both schools into the single school proposal will benefit from the ideas and initiatives already established in the individual Travel Plans.

8.1.9 Appendix H contains a Framework Travel Plan for initial consideration in developing the new plan. It draws upon initiatives set out in A Safer Journey to School.

8.2 Walking

8.2.1 Plan 4071/001, at Appendix I, shows the isochrones ranging from 500m to 2500m centred on the new school site. The Institution of Highways & Transportation published in 2000 their guidelines for 'Providing for Journeys on Foot'. The guidelines suggest for commuting to town or school the desirable walking distance is 500 metres and the acceptable and preferred maximum distances are 1000 and 2000 metres respectively.

8.2.2 1000m from the site encompasses Wombwell town centre and the lower edge of Darfield. Within 1500m is Darfield. Within 2000m are the edges of Brampton and Little Houghton and therefore within the preferred maximum walking distance from the new school site. 2500m encompasses the majority of the existing Wombwell High and Foulstone High School catchments.

8.2.3 Based on a typical walking speed of 1.4 metres per second, the following times could be expected for the identified distances:

Distance	Time (Minutes)
500m (0.3 miles)	6
1000m (0.6 miles)	12
1500m (0.9 miles)	18
2000m (1.2 miles)	24
2500m (1.5 miles)	30

8.2.4 It has been identified from the Public Rights of Way plans issued by Barnsley MBC that there is a Local Development Framework (LDF) Greenway proposed on the route of an existing footpath which runs from Littlefield Road north through the proposed school site to Netherwood Road and then continuing north east to the A635 Doncaster Road terminating at the village of Ardsley. The existing route is due to be upgraded by the Local Authority in the future as part of their Local Development Framework Plan.

8.2.5 Barnsley MBC have provided plans which identify public rights of way and cycle routes in the vicinity of the existing and proposed school sites, including the following:

- Trans Pennine Trail
- Cycle Routes
- Rights Of Ways
- Ex County Borough Footpath
- LDF Proposed Green Ways
- The Dearne Way Waymarked Footpath
- Bridleways
- Barnsley Boundary Walk

8.2.6 From the plans provided by Barnsley MBC it is apparent that there is a vast network of off road rights of way. Some of these off road routes provide direct access from the surrounding residential areas and an alternative to the footpath network which follow the existing roads. Other off road routes would create a longer route and it is considered that these would not be favoured by pupils of the new school. The majority of these off road routes, at some point, are unmade, unlit and isolated and therefore should not be recommended to pupils as safe routes to school. However, it is likely that pupils may choose to use these routes as part of their route to and from school. The existing footpaths which follow the existing road network are recommended as the safest of the routes to the proposed school given that they are well lit, hard surfaced and overlooked.

8.2.7 The pedestrian improvement measures recommended as part of this development are as follows:

- It is proposed to upgrade the surface of the Trans Pennine Trail from Littlefield Lane to Bradberry Balk Lane, a length of approximately 750m, to a 3.5m wide cycleway/footway. In addition, lighting shall be provided along this route. It is considered that the upgrade of this route shall provide a realistic alternative for pedestrians and cyclists to access the site. In addition it is believed that the provision of such facilities as part of the proposed development will have a significant effect on encouraging pupils, staff and visitors to utilise alternative modes of transport when accessing the proposed school and therefore reduce the number of vehicular trips generated by the proposed development as part of an effective school travel plan. These improvements are identified on drawing 4071/002A.

- In order to safely link the proposed hard surfaced footway/cycleway to Wombwell town centre a controlled pedestrian and cyclist (Toucan) crossing should be provided on the site of the existing dropped crossing on the Wombwell bypass at the junction of Littlefield Lane. This will provide a safe means of crossing the Wombwell bypass for pupils accessing the proposed school site to and from the Wombwell town centre. This proposed improvement can be seen on drawing 4071/002A.

- As previously mentioned, the existing pedestrian footway which runs through the site from Littlefield Lane in a northerly direction to Netherwood Road and beyond, is currently unlit, not overlooked and not hard surfaced. It is acknowledged that children may

continue to use this route once the proposed school is operational, however this route is not recommended as a safe route to school given that the surface is unmade, not overlooked and runs alongside a water course for part of its length. It is proposed to encourage pedestrians and cyclists to utilise the Trans Pennine Trail route through its upgraded surfacing and lighting.

- Pedestrians and cyclists accessing the proposed school site from west and south should be encouraged to utilise the upgraded section of the Trans Pennine Trail to the proposed school access, however the Trans Pennine Trail does continue from Bradberry Balk Lane in a north west direction and this section is unmade, unlit and not overlooked. Therefore it is considered that the safest pedestrian route for pupils arriving from the north west is to utilise the existing footway network of the A633 Barnsley Road, then turn left at the Bradberry Balk Lane roundabout and then right onto the Trans Pennine Trail toward the proposed school site. This route can be seen on drawing 4071/002A at Appendix J.

- A controlled zebra pedestrian crossing with signage is proposed on Bradberry Balk Lane to define the crossing point of the Trans Pennine Trail. This feature provides a link to the footway on Bradberry Balk Lane and a crossing point to/from the continuation of the Trans Pennine Trail. This feature will also help alert drivers to the potential crossing of pedestrians at this location. This can also be seen on drawing 4071/002A at Appendix J.

- The above routes are effective, mainly traffic free, pedestrian and cyclist accesses which will separate pedestrians and cyclists from

the traffic travelling on the Wombwell bypass and provide a safer environment for all road users.

- It should be noted that the only previous alternative access to the site from the north east would be via a public footpath to/from Station Road approximately 80m south of Henry Street. However, this public footpath is unlit, not overlooked, is unmade and more importantly runs parallel with an open water course adjacent to the development site. Therefore it is considered that this route is unsuitable and should not be promoted as a safe route to school for pupils of the new school, and all efforts should be made by the school where possible to discourage the use of this sub-standard route. Given the implementation of the improved pedestrian and cyclist access to the site from Pitt Street, it is considered that this public footpath would not be the favoured point of pedestrian access / egress from the site.

- In order to discourage car use and parent drop off/pick up on Pitt Street it is proposed to implement double yellow line waiting restrictions along the length of the site frontage with Pitt Street. This will require a Traffic Regulation Order.

8.3 Other Mitigation Measures

- As part of the above recommendations it is proposed that a reduction of the speed limit from 50mph to 30mph on a 600m section of the A633 Wombwell bypass ranging from 150m east of the Littlefield Lane junction, encompassing the proposed pedestrian crossing and site access with the limit of the speed reduction

ending some 320m from the Bradberry Balk Lane roundabout. This will improve pedestrian and cyclist safety at the controlled pedestrian crossing and provide increased safety for vehicular turning movements at the proposed site access with the Wombwell bypass whilst also providing easier opportunities for vehicles to enter and exit the site.

- Within the reduced speed limit on the Wombwell bypass, it is proposed to implement a school zone by way of signage and road markings. The school zone will run the length of the above speed reduction and will encompass the proposed signalised pedestrian crossing and site access. This can be seen on drawing 4071/002A at Appendix J.

- It is also proposed to implement a school zone by way of signage and road markings for the length of the site frontage on Pitt Street. This 'school zone' will include double yellow line road markings on both sides of Pitt Street by way of a Traffic Regulation Order to prevent the parking or waiting of vehicles associated with the school drop off and pick up times of the proposed school.

- A new vehicular access is proposed off the Wombwell bypass in the form of a major/minor priority junction. The junction design shown on drawing 4071/002A maintains the existing widths of the through lanes on the bypass and incorporates the following design criteria:
    - 3.5m wide right turn lane
    - Traffic islands with illuminated bollards and refuge indicator lamps.

- Junction visibility splays proposed at 4.5m x 90m.
- 15m kerb radii.
- Improved lighting.
- 2 lane exit (separate left and right turn exit lanes)

No footways are proposed at this junction given that no pedestrian movements are expected within the immediate vicinity of the junction. Pedestrian movements associated with the proposed school will be routed via the Trans Pennine Trail.

- The access road leading into the site is proposed to be 7.3m wide. The access road is proposed to incorporate 'bus friendly' traffic calming measures in the form of speed cushions spaced 60m apart, designed to achieve speeds of approximately 25mph. In addition a 3.5m wide footway/cycleway is proposed to run alongside the access road to the school grounds. There will be appropriately raised crossing points on the access road for pedestrians and cyclists which give both pedestrians and cyclists priority.

- As part of the development it is proposed to relocate the public car park off Bradberry Balk Lane to be accessed from the new school access road. This car park will be hard surfaced, marked out, lit and will be an improvement over the existing car park off Bradberry Balk Lane which is of an unmade surface, unlit and not marked out. This will also reduce the level of traffic on Bradberry Balk Lane as part of the development. This is shown on drawing 4071/002A.

- In addition it is proposed to implement a bus drop off area in the form of a circular loop on the school access road approximately

100m from the proposed school building. Pupils will then be able to walk toward the school itself via the 3.5m wide cycleway/footway.

9.0 CYCLING

9.1 The development would provide covered cycle stands located close to the main entrance. Details of the location and number can be conditioned for subsequent approval.

9.2 Barnsley Council have identified that a Bursary award of £10,000 is available to new school sites with Travel Plans, in order to implement measures within the school grounds for improved cycling and walking.

9.3 Cycle storage for the new development is proposed to be 10% of the student population. The new school will have a capacity of 1800 students and staff. It is recommended that 180 cycle spaces (90 Sheffield stands) should be provided on the new school site. There is scope to encourage and increase the number of children which cycle to school through the implementation of an effective school Travel Plan.

9.4 There are no dedicated cycle lanes along the identified roads shown on plan 4071/002A at Appendix J. However the initial section of the A633 Barnsley Road from the roundabout of Bradberry Balk Lane is sufficiently wide as not to preclude Barnsley Road as an advisory cycle route.

9.5 The major hazard identified for cyclists travelling to/from the proposed school site would be the 40 mph section of the A633 Barnsley Road. High vehicle speeds with no dedicated cycle facilities is not conducive to safe cycling, especially where children, often inexperienced cyclists on the road, are concerned. In addition the roundabout junction of

A633 Barnsley Road / Bradberry Balk Lane would also be hazardous to cyclists. The only alternative route other than utilising the Bradberry Balk Lane roundabout junction would be the extension of the Trans Pennine Trail albeit un surfaced and unlit. It is therefore recommended that the safer of the two routes would be for cyclists to follow the routing of the existing highway network before arriving at the upgraded Trans Pennine Trail route into the site.

9.6 It is considered that cyclists should follow the existing road network and the pedestrianised area of High Street when approaching the school site from the south via the new Toucan crossing on the Wombwell bypass.

9.7 Young cyclists need training to prepare for riding on roads. Most Local Authority Road Safety Departments offer cyclist training for children aged 10 and above. Research shows that the most effective courses are those which include on-road training. Measures to promote safer cycling are identified within the framework Travel Plan at Appendix H.

9.8 As identified above, an upgrade of the Trans Pennine Trail to a 3.5m wide cycle/footway providing a traffic free pedestrian and cycle access (shown on drawing 4071/002A at Appendix J) on the frontage of the site is recommended as part of this development.

9.9 This will be of particular benefit to cyclists in terms of safety because the shared cycle/footway will remove the majority of cyclists from the Wombwell bypass over its length and therefore reduce any potential conflict with vehicles travelling on the Wombwell bypass.

10.0 TRAFFIC AND TRANSPORT

10.1 The TRICS database has been interrogated to estimate vehicle trips from the proposed school site. Peak hour vehicle trip rates have been agreed with Barnsley Highways Department. The TRICS data is contained at Appendix K and the predicted AM and PM peak hour traffic generations are summarised based on the opening year student population of 1800.

Table 1: Proposed Peak Hour Traffic Generation Wombwell / Darfield School Site

Time	Arrivals	Departures	Two-Way
08:00 – 09:00	234	126	360
15:00 – 16:00	90	144	234

10.2 It is important to realise that a proportion of vehicular trips associated with the new school site will already be occurring on the local highway network. Because of the proximity of the old and new school sites, it is highly likely that a proportion of traffic is already using the Wombwell bypass and is included within the base traffic surveys. However, in order to assess an absolute worst case scenario, it has been assumed that all traffic generated by the proposed school will be new to the network.

10.3 A capacity assessment has been undertaken for the proposed major/minor priority junction using the computer program PICADY 5. PICADY assesses the capacity, queuing and delay experienced at major/minor priority junctions. The assessment has been carried out at

the opening year of 2011 and with five years growth at 2016 assuming the worst case of all development traffic being new to the highway network.

10.4 Factors from the National Road Traffic Forecast Figures (NRTF) have been used to growth the 2006 base traffic to the proposed Opening Year of 2011 with five years growth at 2016. Central growth factors of 1.079 and 1.161 have been used respectively.

10.5 Within the capacity assessment of the proposed site access, an assumption of 10% HGV's has been used for the traffic flow on the Wombwell bypass. 3% HGV's has been assumed for the traffic flow on the site access road, to allow for bus traffic. This is therefore considered a very robust assessment of flows at the proposed site access.

10.6 For the purposes of assessing the traffic impact of the proposed school, a sensitivity assessment has been undertaken using a 70/30% distribution split in both directions to and from the proposed site.

10.7 Details of the results from the capacity model for the proposed site access junction modeled are contained in Appendix M. A summary of the results are shown in the tables below:

Arm A = A633 Wombwell Bypass (North West)
Arm B = Site Access
Arm C = A633 Wombwell Bypass (South East)

Movement	Am Peak 08:00–09:00	Pm Peak 15:00–16:00

	Max RFC	Max Queue	Max RFC	Max Queue
B – A	0.719	2.20	0.586	1.34
B – C	0.139	0.16	0.135	0.15
C - AB	0.170	0.20	0.057	0.06

C - AB	0.392	0.64	0.134	0.15

PICADY Assessment
2016 Network Flows + Development 70/30 – A633 Wombwell Bypass/Proposed Site Access

10.8 The results predict that the proposed junction would operate satisfactorily with no queuing or capacity problems and a maximum

ratio of flow to capacity (RFC) of 0.719 and therefore sufficient spare capacity in the opening year of 2011. The 2016 results predict that the proposed junction in particular the right turn B – A, would operate marginally above the accepted design limit of 0.85 RFC in the morning peak period. However, there is still capacity available within the junction, even at the design year of 2016 and it is considered cost effective to design junctions near to the value of 0.85 RFC.

10.9 Whilst the junction does operate marginally above the accepted 0.85 RFC, the junction design does incorporate adequate visibility at 4.5m x 90m in both directions, additional lighting, traffic calming in the form of red asphalt and traffic islands and provides two exit lanes to maximise capacity.

10.10 It can be seen that the junction operates with more than sufficient spare capacity in the afternoon school peak period.

10.11 Further details of the results of the capacity models are contained within Appendix M.

11.0 SUMMARY AND MITIGATION

11.1 A robust assessment of the traffic impact from the new school has been undertaken and indicates that the development would not have a detrimental affect upon the local highway network.

11.2 Following the assessment of the highway network identified within this report, it is recommended that at this outline stage the following highway measures be offered for inclusion as conditions of planning consent, with details to be agreed with the Local Authority at the detailed planning application stage:

- The speed limit on Wombwell Road over a 600m section should be reduced from 50mph to 30mph to provide a safer environment for pupils walking and cycling to school and crossing Wombwell Road through a reduction in vehicle speeds. The extent of this 600m section includes 150m east of the Littlefield Lane junction, encompassing the proposed pedestrian crossing and site access with the limit of the speed reduction ending some 320m from the Bradberry Balk Lane roundabout. This reduction in speed limit would require a Traffic Regulation Order. This can be seen on drawing 4071/002A at Appendix J.

- The proposed school site would provide an area within the site where buses will drop off and pick up pupils incorporating a bus turn around facility to allow buses to enter, turn and exit the proposed site in a forward gear. The details of this can be agreed at the detailed planning application stage.

- A new vehicular access is proposed off the Wombwell bypass in the form of a major/minor priority junction. The junction design shown on drawing 4071/002A maintains the existing widths of the through lanes on the bypass and incorporates a 3.5m wide right turn lane with traffic islands. Junction visibility splays are proposed at 4.5m x 90m. No footways are proposed at this junction given that no pedestrian movements are expected within the immediate vicinity of the junction. Pedestrian movements associated with the proposed school will be routed via the Trans Pennine Trail.

- The access road leading into the site is proposed to be 7.3m wide and as part of the development it is proposed to relocate the public car park off Bradberry Balk Lane to be accessed from the new school access road. This car park will be hard surfaced, marked out, lit and will be an improvement over the existing car park off Bradberry Balk Lane which is of an unmade surface, unlit and not marked out. This will also reduce the level of traffic on Bradberry Balk Lane as part of the development. This is shown on drawing 4071/002A.

- In addition it is proposed to implement a bus drop off and parent drop off area in the form of a circular loop on the school access road approximately 100m from the proposed school building . Pupils will then be able to walk toward the school itself via the 3.5m wide cycleway/footway on both sides of the carriageway.

- Within the reduced speed limit on the Wombwell bypass it is proposed to implement a school zone by way of signage and road markings. The school zone will extend approximately 150m east from the

Littlefield Lane junction and will encompass the proposed signalised pedestrian crossing, proposed site access junction and will extend in a westerly direction to approximately 320m from the Bradberry Balk Lane roundabout. This essentially covers the entire length of the speed reduction. This can be seen on drawing 4071/002A at Appendix J.

- 30mph gateway features on the Wombwell bypass will define the start of the change of speed limit. This can be seen on drawing 4071/002A at Appendix J.

- The school zone will be identified by signage and red asphalt road markings and will make drivers aware of the presence of the school which will provide a safer environment for pedestrians and cyclists. This can also be seen on drawing 4071/002A at Appendix J.

- It is also proposed to implement a school zone by way of signage and road markings for the length of the site frontage on Pitt Street. This 'school zone' will also include double yellow line road markings on both sides of Pitt Street by way of a Traffic Regulation Order to prevent the parking or waiting of vehicles associated with the school drop off and pick up times of the proposed school.

- Provide tactile paving where the 3.5m wide cycle/footway crosses the Wombwell bypass at the Littlefield Lane junction as shown on drawing 4071/002A at Appendix J.

- In order to safely link the proposed hard surfaced footway/cycleway to the Wombwell town centre a controlled pedestrian and cyclist (Toucan) crossing should be provided on the site of the existing dropped

crossing on the Wombwell bypass at the junction of Littlefield Lane. This will provide a safe means of crossing the Wombwell bypass for pupils accessing the proposed school site to and from the Wombwell town centre. This proposed improvement can be seen on drawing 4071/002A.

- It has been identified that the Trans Pennine Trail runs adjacent to the site from Bradberry Balk Lane to Littlefield Lane and onwards to the east. As part of this development the route should be hard surfaced and lighting provided from Littlefield Lane to Bradberry Balk Lane to maintain its effective use for pedestrians and cyclists during the winter months. This section is approximately 750m in length. This route can be seen on drawing 4071/002A at Appendix J. It is considered that the upgrade of this route shall provide a realistic alternative to the Wombwell bypass for pedestrians and cyclists to access the site.

- Provision of traffic free pedestrian and cycle accesses direct from the Trans Pennine Trail will separate vehicles from students accessing the new school site.

- Provision of a signalised pedestrian crossing on the Wombwell bypass, including provision of dropped crossings with tactile paving in order to facilitate the safe crossing of pedestrians across the Wombwell bypass given the high number of pupils expected to travel to and from the new school, from the south, which may conflict with the high traffic flows on the bypass. This proposed facility is shown on drawing 4071/002A at Appendix J.

- The proposed site access from the Wombwell bypass is shown on drawing 4071/002A at Appendix J. It is not proposed to provide any

pedestrian facilities at the proposed site access with the Wombwell bypass given that both pedestrians and cyclists will be segregated from vehicular traffic by means of the Trans Pennine Trail. This will be of benefit to pedestrian, cyclist and vehicular road safety.

11.3 In addition to these measures a Travel Plan will also be developed for the school once outline permission has been granted. A School Travel Plan is a whole school initiative and therefore it is key to involve students, parents, teachers and governors within the development of the plan. It is therefore suggested that time is needed once the school is operational to consider the individual circumstances presented by the new school site in developing an effective School Travel Plan. It is intended that a plan should be submitted to the Local Authority for approval within 6 months of opening.

11.4 Should the proposed school site be granted permission it is considered that there is scope for the existing normal network bus services and the home-to-school services to be re-routed to provide a service for pupils traveling to the proposed site within the morning and evening school peak periods. At all other times during the day, the bus services would resume their normal route. It should also be borne in mind that it is unlikely that any home-to-school services will be required to the existing Foulstone and Wombwell School site if the proposed site is granted permission.

11.5 Construction working times will be limited to 08:00 – 13:00 hours on Saturdays with no Sunday or Bank Holiday working.

11.6 It is recommended that all construction traffic use the Wombwell by-pass to access the development site. A temporary access may be required or alternatively the access should be built first to allow access to the site.

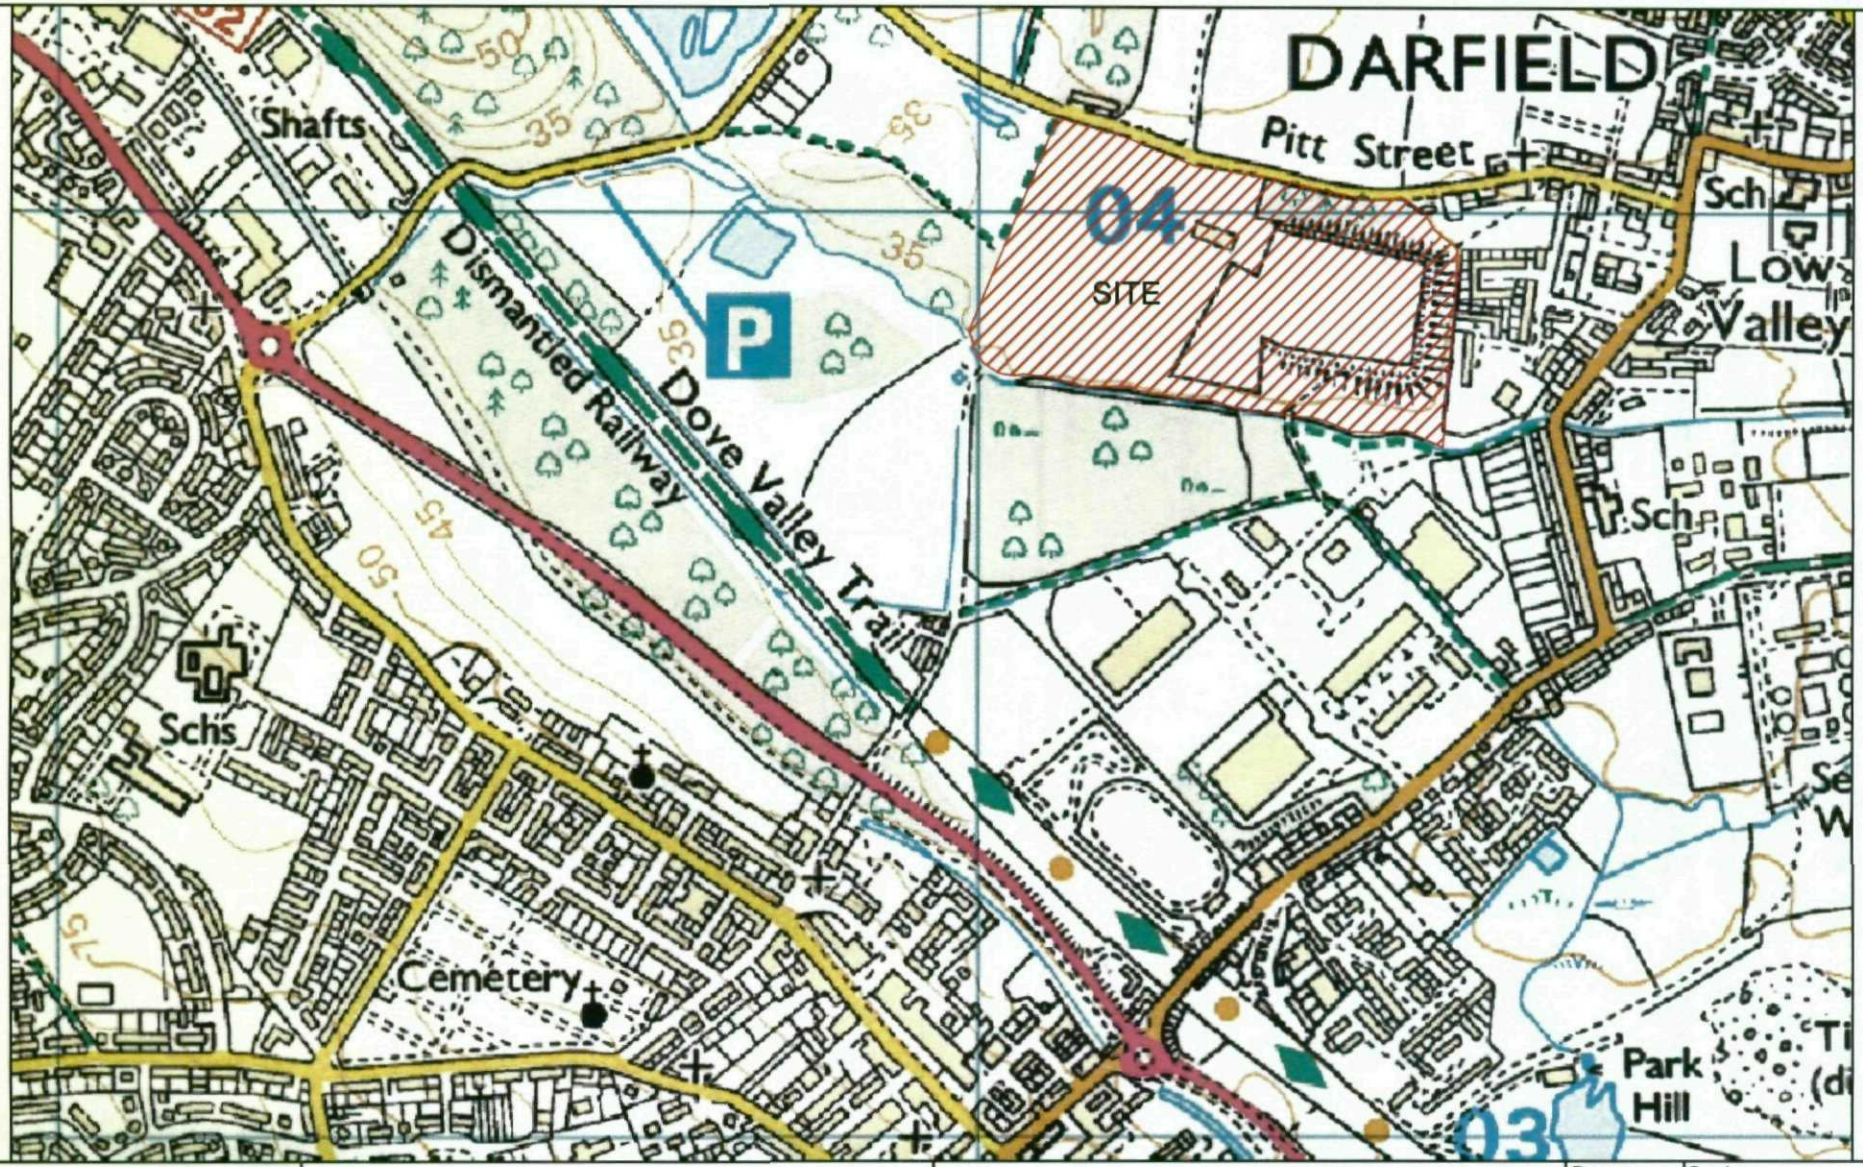

RESIDUAL EFFECTS

11.7 The residual effects of the proposed school development in Transport terms will all be associated with the concentration of pedestrian, cycle and vehicular traffic at peak times around the new site. This activity will be similar to, but relocated from, the combined generation associated with the two existing school sites.

11.8 The provision of modern access facilities, together with measures to encourage alternative modes of transport will reduce traffic growth and provide higher standards of safety and accessibility than are offered by the present school sites.

Travel South Yorkshire

40

Full Timetable

Sheffield
Broomhill
Ranmoor
Nether Green
Fulwood

Also serves:
University of Sheffield
Royal Hallamshire Hospital

From 29/07/2007

In partnership with:
First transforming travel

What's changed

From Sunday 29 July 2007 a new service will be introduced replacing service 60.

This service will have minor timetable changes.

Single Service Timetables

Full Timetable – Individual timetables give the full timetable for a service and where appropriate will combine services that have been developed to complement each other.

40 ▸ Monday to Friday — Fulwood ▸ Sheffield Centre

Home to School Transport Parents' Questions Answered

Parents and carers need to be aware that it is their responsibility to ensure that their child attends school on a regular basis.

However, there are a number of situations where the Council provides assistance with transport to school.

This booklet contains the information that parents need to know and includes the most frequently asked questions.

Section 1 Age of the Children

- Nursery age children

  Currently there is no charge for children under the age of 5 years when travelling on a bus if an adult paying full fare accompanies them.

- Pupils aged 5 to 7

  Free transport to school for full time pupils will be provided, if on the day preceding the start of term they live over 2 miles from the school nearest their home.

- Pupils aged 8 to 16

  Free transport to school for full time pupils will be provided, if on the day preceding the start of term they live over 3 miles from the school nearest their home.

QUESTIONS

- **What happens if an older brother or sister accompanies a nursery age child?**

  The bus company may charge the nursery child the concessionary fare.

- **What happens if my child reaches the age of 8 or 16 during the term?**

  Their free travel pass will be valid until the end of the academic year in which they reach the age of 8 or 16.

- **If I obtain a place at my first preference school and it is over 2 miles (in the case of primary) or 3 miles (secondary) will they get free transport?**

  Only if your first preference school is the nearest to your home. If it is not the nearest to your home you will be assessed for free travel based on the distance between your home and your nearest school. If that distance is above the qualifying distance of 2 or 3 miles your child will be entitled to the equivalent amount of assistance to your preferred school.

- **Who has decided it should be 2 and 3 miles?**

  This is in line with Government Legislation and adopted as the Policy of the Local Authority.

- **If my child has a statement of special educational needs does it affect my right to free transport?**

  No. Transport for pupils with a statement of special needs is provided in accordance with the specified provisions of the statement. (See section 8).

- **If my child travels between school sites is there any assistance available?**

  There is no assistance from the Local Authority towards this. Schools will make their own arrangements for pupils who need to transfer to alternative sites during the school day.

- **Do pupils have to pay full fare if they are not entitled to free travel?**

  All pupils resident in South Yorkshire and under 16 years of age at the start of the school year can travel at a reduced rate (ie the concessionary fare) throughout South Yorkshire with a Megatravel Pass. These passes are issued free of charge by SYPTE Travel Information Centres and allow travel at the concessionary fare for school and social journeys (see page 15 for where Travel Information Centres are situated). If the pupil is unable to produce a valid Megatravel Pass the full fare must be paid.

- **What is a concessionary fare?**

  This is a fare determined by the SYPTE for pupils to travel at a reduced rate on public transport throughout the County of South Yorkshire.

- **What happens if my child loses their travel pass?**

  The South Yorkshire Passenger Transport Executive issue all replacement passes and there is a cost involved. You will need to contact them on telephone number 0114 2211419

Section 2 Measuring the Distance

- Measuring the distance between home and school is done differently from that used for admission to school
- The distance from the pupil's home to the nearest school is done by the nearest suitable walking route.
- In deciding what is a suitable walking route the following points are taken into account:
  - is the child accompanied by an adult;
  - are there suitable footways;
  - street lighting
  - volume of traffic
  - roads to be crossed

QUESTIONS

- **Who decides what is a suitable walking route?**

  Relevant Officers of the Local Authority with a knowledge of Transport and Health and Safety.

- **If I do not get a free travel pass can this be reviewed?**

  Yes. The School Transport team will give you details of the review procedure.

- **What happens if my family moves address and I wish my child to continue at the school for which he has a travel pass?**

  If you move in your child's final year of primary education (year 6) or in their 3rd, 4th or 5th year of secondary education (years 9,10 or 11) and the distance from your new address and the school is above the aforementioned qualifying distances you will be entitled to free travel. Any existing travel pass would need to be returned to the School Transport Team to be amended.

  If your new address is less than the qualifying distance from school you will not be entitled to free travel and must return your travel pass to the Education Department School Transport Team.

- **What happens if my child is entitled to a travel pass but there is no suitable bus service?**

  Alternative transport will be provided.

Section 3 Applying for Free Transport

- If you think your child is eligible for free transport you should telephone the Transport Section in Education Services.
- You will be asked the child's address and the name of the school.
- The distance between home and school will be assessed and if you qualify you will be sent an application form.
- You complete the application form and attach a photograph of your child and return it to Education Services.
- A travel pass will then be sent to your home address.

QUESTIONS

- **Is there any cost to me for a free travel pass?**

  No. There is only a charge for replacing passes that have been lost, defaced or damaged.

- **Can the travel pass be used at weekends and during school holidays?**

  No. Free travel passes are only valid Monday to Friday during term time.

- **If I get a travel pass for my child do I have to apply for a new one each year?**

  Yes. Passes are renewed annually and an application form will be sent to your home address each year to apply for a renewal. You must remember to notify the Education Transport Team if your address changes throughout the year.

Section 4 Free Travel Under 2 and 3 miles

- In exceptional circumstances children who live under the 2 and 3 mile limits can receive assistance with transport.
- Exceptional circumstances will be where a pupil lives under the 2 and 3 mile limits and there is no suitable walking route to the nearest school.

Section 5 Different Types of Bus Services

- Every day of the week many buses can be seen transporting children to school.

  These services may be operated commercially or under contract. Commercial bus services are not supported from public funds and the only income to the operator from their operation is derived from fares collected plus payments made by SYPTE in return for the acceptance of zero-fare passes and for the carriage of passengers at the concessionary rate (currently 40 pence). SYPTE has no direct control over the operation of these services but will take up any complaints with the operator. SYPTE also has no direct sanctions in the event of unreliability or non-operation of such services; ultimate control of these services rests with the Traffic Commissioner. Services which are not provided commercially are procured by SYPTE and a contract covers the terms of this payment. In the event of unreliability or non-operation of these services SYPTE can take disciplinary action against the contractor and may also withhold payments.
- Both commercial and contracted services may form part of the general network of services which operate throughout the year or they may be provided specifically to transport children to a particular school and run on schooldays only.
- Operators may amend or withdraw commercial services, for example if the demand falls or the service ceases to be profitable. Where this happens the service will usually only be replaced under contract if there are zero-fare passholders who have no other bus service available to them, including by changing buses if appropriate.

QUESTIONS

- **Can members of the public travel on these services?**

  Yes they are open to everyone on payment of the appropriate fare.

- **What happens if a commercial service is withdrawn?**

  Other bus operators could provide a commercial replacement, but a replacement service will only be provided under contract by SYPTE if there are zero-fare passholders who have no other bus service available to them, including changing buses if appropriate.

- **Can a service operated under contract be altered?**

  Yes by agreement with SYPTE and with appropriate notice being given.

  Any requests for alterations to services need to be discussed with SYPTE.

- **Who are SYPTE?**

  The South Yorkshire Passenger Transport Executive.

  SYPTE do not run any buses but have a co-ordinating role as well as funding socially necessary bus services, running the concessionary fares scheme, operating Travel Information Centres, Bus Stations and Interchanges throughout South Yorkshire. See page 15 for contact details.

Section 6 Travel to Catholic and Church of England Schools

- Where a child attends a Catholic school or Church of England school because of religious connections, and that school is not the nearest to their home, free travel will be provided:
  - up to 5 miles for primary school children;
  - up to 12 miles for secondary school children.

QUESTIONS

- **Does this apply to all children or only those who are more than 2 or 3 miles away from the School?**

  This only applies to those pupils living above the statutory qualifying distances of 2 or 3 miles.

Section 7 Post 16 Transport

- Students aged 16 to 18 attending full time courses of study will be entitled to receive a 16-18 Student Pass for travel within South Yorkshire.
- This pass entitles a student to travel by bus or train at the concessionary fare.
- Pass holders can also travel on Northern Trains services in South Yorkshire at half fare
- The pass is available until the end of the academic year in which the student's 18th birthday falls.
- Full details of the Authority's Post 16 Transport Policy are on the DfES website: www.dfes.gov.uk

QUESTIONS

- **What help with transport is there for a student attending a college outside of South Yorkshire?**

  Consideration will be given for assistance with travel to attend courses at establishments outside South Yorkshire only if the student can provide evidence that a comparable course is not provided within South Yorkshire.

  Such applications will be considered exceptionally on an individual basis by the Transport Manager.

  In certain cases individual educational establishments may offer assistance with cross-boundary travel.

- **Does a concessionary pass cost anything?**

  There is no charge for a 16-18 Student Pass except in the case of providing a replacement pass.

- **What is defined as full time for the purposes of obtaining a concessionary student pass?**

  Full time education in this case means a minimum of 12 hours guided learning per week.

- **Can the pass be used any day of the year?**

  The passes are valid every day throughout the year at all times of the day.

- **How does a student apply for a concessionary pass?**

  16-18 Student Passes are issued by SYPTE. Students can collect application forms from their College or Travel Information Centres. The completed form must then be taken to a Travel Information Centre with documentary evidence of proof of age and address and a recent passport-sized photograph. A previous concessionary travel pass may be accepted as proof of age. When the pass is ready it will be sent to the Student's College for collection.

- **Is there any help for students with a statement of special educational needs?**

  Students who possess a statement of special educational needs with transport included as a provision will receive transport to the school named in the statement. The transport will usually continue up until the end of the year in which their 19th birthday falls.

- **What help is there for students with a disability?**

  Applications from students who have difficulty accessing college/school because of disability will be considered on an individual basis. Students should in the first instance contact the college/ sixth form they are attending to establish whether assistance is available.

Section 8 Pupils and Students with a Statement of Special Educational Needs

- All pupils (i.e. whether or not they have a SEN statement) placed with the support of the LEA in primary and secondary schools with resource based provision normally receive travel assistance (unless such assistance is reasonably unnecessary) in the form of one return journey per day.
- Pupils (aged 2-16) placed with the support of the LEA in primary and secondary schools who have transport specified on their Statement of SEN will normally receive travel assistance. Pupils with physical and/or medical difficulties may not require a Statement of SEN. The provision of transport for such pupils will be given consideration and decisions will be taken based on the individual's circumstances.
- All pupils in special schools (aged 2 to 19) normally receive travel assistance unless such assistance is reasonably unnecessary.
- All pupils placed with the support of the LEA in extra-district schools will normally receive travel assistance as follows:

  (i) Day Placement

  One return journey per day

  (ii) Weekly Residential Placements

  One return journey per week

  (iii) Termly Residential Placements

  One return journey per half term

- Students (aged 16 to 19), formerly holding a SEN statement specifying travel assistance, who have transferred with the support of the LEA into extra-district further education institutions resulting in their statement ceasing to be maintained normally receive travel assistance.
- Students (aged 16 to 19) who formerly held a SEN statement specifying travel assistance but whose statement has ceased to be maintained because of their transfer to Barnsley College receive travel assistance directly from the College.

QUESTIONS

- **Who determines whether or not transport is provided for my child who has a statement of special educational needs?**

  Transport is normally provided where this is specified as a provision in a child's Statement of Special Educational Needs.

  The decision on whether or not transport is included in a Statement of SEN is based on relevant professional reports.

- **Can a decision not to provide transport be reviewed?**

  Yes. The School Transport Team will give you details of the review process.

- **Do all children with a statement of special educational needs receive free home to school transport?**

  No - this is dependent upon their individual needs.

- **Can I accompany my child to school if free transport is provided?**

  This is only possible where space permits in the vehicle provided.

- **Will my child travel alone to school?**

  In most cases there will be an escort allocated to the vehicle in which your child will travel. Escorts are employed by the Local Authority.

- **Once provided for my child will it last for all the time they are at school?**

  Transport is constantly reviewed to assess changing demand. As part of the Annual Review of a child's Statement of SEN, transport will be reassessed. It is possible for transport to be withdrawn where necessary as part of this process.

- **What type of transport is provided for children with statements?**

  Pupils may be issued with a free travel pass to travel on public transport or they may travel on transport contracted by the Local Education Authority. The type of contracted transport provided will be dependant upon the individual needs of the pupil. This may be a taxi, mini bus or a specialist accessible vehicle.

- **If my child has a statement of special educational needs and free transport is provided will he/she be collected from home?**

  Collection points may be from directly outside the home or from a designated point close to the home. This is dependent upon the needs of the pupil and accessibility to the home.

Section 9 Help and Advice

- For help and advice on:
  - home to school transport;
  - students attending sixth form and colleges;
  - students with Special Educational Needs or a Disability;
  - students attending courses outside of South Yorkshire;

1. INTRODUCTION

1.1 Sanderson Associates have been instructed to provide a Framework School Travel Plan in support of a planning application for the construction of a new advanced learning centre at Darfield / Wombwell site, in Barnsley.

1.2 In accordance with Local and National Government Policies to protect and enhance the environment, this Framework Travel Plan assesses the current situation in the vicinity of the site, and proposes measures to encourage accessibility via a variety of transport modes.

1.3 Both of the existing Wombwell High and The Foulstone High Schools currently have Travel Plans for their existing sites. A travel mode survey was carried out in October 2005, the details of which can be seen in section 2.0 of this Travel Plan Framework.

1.4 This Travel Plan will be further developed following the submission of full planning application and with further discussions with the Local Highway Authority.

1.5 The main objectives of the Travel Plan are as follows:

- To maximise the accessibility of the site by means other than the private car.

- To encourage pupils to travel to the new school site via alternative means other than the car.

- To ensure that the Travel Plan meets the needs of the all of the school users.
- To make staff aware of the benefits to be derived from the Travel Plan.
- To minimise the level of vehicular traffic generated by the site.
- To enable the development to protect and enhance the environment.

2. EXISTING TRAVEL MODE SURVEY

2.1 Travel mode survey information has been provided for both the Wombwell and Foulstone High School. Information on transport modal split as derived from a survey carried out in October 2005 is summarised as follows:-.

	Foulstone High School	Wombwell High School
Percentage	**To School**	**To School**
Walk	38	73
Cycle	0	1
Bus	46	12
Car	12	10
Car Share	4	3
Other	0	1
Total %	100%	100%

	Foulstone High School	Wombwell High School
Percentage	**From School**	**From School**
Walk	39	75
Cycle	0	1
Bus	48	12
Car	10	8
Car Share	3	2
Other	0	2
Total %	100%	100%

	Foulstone High School	Wombwell High School
Percentage	**Would like to**	**Would like to**
Walk	19	38
Cycle	23	14
Bus	30	8
Car	17	21
Car Share	2	6
Other	9	13
Total %	100%	100%

2.2 It should be noted that Foulstone High School had no cycle parking at the time of undertaking the survey. The existing travel patterns of both school sites show that there are a higher percentage of pupils walking to Wombwell High School than walking to Foulstone High School. This is possibly due to Wombwell High's location within a predominantly residential area and Foulstone High School is more accessible on main roads from the wider surrounding area.

2.3 It can be seen that a high percentage of school children currently travel to and from Wombwell High School on foot. This being 73% to school and 75% from school, with car travel being 13% and 10% respectively. Bus travel is at 12% to and from Wombwell High School. These figures are possibly due to Wombwell High's Location within a predominantly residential area.

2.4 However, the percentage of school children traveling to and from Foulstone High School is lower at 38% and 39% respectively, with car travel being at 16% and 13% respectively. Bus travel is higher at 46% and 48% respectively. These figures are possibly due to Foulstone High School being more accessible on main roads from the wider surrounding area.

2.5 The survey also identifies the potential level of pupils wishing to travel to school by alternative modes of transport should the opportunities and facilities exist to help them accomplish their ideal trip to and from

school. The survey shows an increase in the likelihood of pupils traveling to school by cycle, a similar amount traveling by bus and an increase in the number of pupils traveling by car.

2.6 It is expected that given the high level of users currently travelling to school on foot, this trend will continue at the proposed school site because walking to the new school site will be promoted as part of the proposed development and the mitigation measures are proposed to facilitate this and provide safe routes to school. It is considered that the percentage of pupils traveling to and from the new school site is therefore likely to be high with the assistance of an effective Travel Plan.

3. TRAVEL PLAN CO-ORDINATORS

3.1 It is essential that for a Travel Plan to work successfully a person be appointed as Travel Plan Coordinator. The Coordinator's duties will be to promote, coordinate, monitor and review the Travel Plan to ensure that the initiatives are being met and remain appropriate to the needs of the users.

3.2 The school will nominate an internal Travel Plan Coordinator who will review this Framework Travel Plan and will in due course coordinate the preparation of a more comprehensive Travel Plan.

3.3 A Travel Plan should be submitted to the Local Authority for approval within 6 months of the school opening.

4. INITIATIVES

4.1 As previously mentioned both of the existing schools, Wombwell High and The Foulstone High School, have drawn up Travel Plans for their current sites, however, the following suggests specific areas in which initiatives should be introduced to improve and encourage alternative means of travel to the new school site, as recommended in the DfT document "A Safer Journey to School".

4.2 Buses

4.2.1 There are currently regular bus services to and from the existing schools to neighbouring residential areas using either the general bus service network or specific home-to-school services.

4.2.2 It is proposed that the new school site will have provision within the site for buses to drop off and pick up pupils together with an on site bus turn around facility to allow buses to enter, turn and leave the site in a forward gear. It is also recommended that these bus stops are provided with bus boarding kerbs and shelters to give an enhanced environment for those pupils travelling to the new school by bus. The details of this can be agreed at the appropriate stage. This proposal can be seen on drawing 4071/002 at Appendix J within the Transport Assessment.

4.2.3 Specific home-to-school services are run by Barnsley MBC. This service allows free travel for pupils which live more than 3 miles from the nearest school. Pupils must apply to Barnsley MBC to receive free travel. The details of how to apply and of the relevant conditions are included in the Home to School Transport brochure provided by Barnsley MBC, which is included in Appendix H of the Transport Assessment.

4.2.4 It is considered that there is scope for the existing normal network bus services and the home-to-school services to be re-routed to provide a service for pupils travelling to the proposed site within the morning and evening school peak periods. At all other times during the day, the bus services would resume there normal route. It should also be borne in mind that it is unlikely that any home-to-school services will be required to the existing Foulstone and Wombwell School site if the proposed site is granted permission.

4.2.5 Discounted travel is available for all students in South Yorkshire between the ages of 11 and 18.

4.2.6 Proposed Initiatives

- Schools are well placed to publicise school bus services to parents and children. Timetables and leaflets can be displayed

in the school foyer and sent home on a regular basis. Timetables can be hard to understand but by involving students in the design, schools may be able to produce materials that are more readable and more appealing. It is also helpful if children can be taught how to use timetables.

- All pupils are provided with a copy of the Home to School Transport brochure which gives details of how to claim for free travel to school.

4.3 Cycling

4.3.1 There are no dedicated cycle lanes along the roads within the vicinity of the proposed school site. However the initial section of the A633 Barnsley Road from the roundabout of Bradberry Balk Lane is sufficiently wide as not to preclude Barnsley Road as an advisory cycle route.

4.3.2 The majority of the school catchment area is encompassed within 3000m of the development site and is within easy cycle distance of the new school site. The proposed improvements offered as part of this development are listed below.

4.3.3 Proposed Initiatives

- The provision of cycle parking, in a covered area overlooked by classrooms or offices and convenient for the main entrance. The development would provide covered cycle stands located close to the main entrance. Details of the location and number can be conditioned for subsequent approval.
- Organise cycle training for children from experienced adult cyclists who have received training from a road safety officer.
- Sell discounted reflective clothing and accessories.
- An upgrade of the Trans Pennine Trail is proposed to a 3.5m wide cycle/footway providing a traffic free pedestrian and cycle access to the site over a section of approximately 750m from Littlefield Lane to Bradberry Balk Lane. This can be seen on drawing 4071/002 in Appendix J of the Transport Assessment.
- Provision of a Toucan crossing on the A633 Wombwell bypass, adjacent to the junction of Littlefield Lane in order to assist the crossing of cyclists to/from Wombwell town centre when accessing the school site.
- A 3.5m wide cycle / footway is proposed to commence at this Toucan crossing, on the site side of the Wombwell bypass and will extend to the proposed 3.5m wide cycle/footway which runs for part of the length of the Trans Pennine Trail. This provides traffic free pedestrian and cyclist access to the school site from the Town Centre for the majority of the route. This can be seen

on drawing 4071/002 within Appendix J of the Transport Assessment.

- The speed limit on the A633 Wombwell bypass is proposed to be reduced from 50mph to 30mph for a length of approximately 600m and encompassing the proposed Toucan crossing at the junction of Littlefield Lane/Wombwell bypass and the proposed priority site access junction. The length of the speed reduction is also proposed to include a school zone.
- Traffic free pedestrian and cyclist accesses from Pitt Street into the site will separate pedestrians from traffic entering and exiting the site and provide a safer pedestrian and cyclist environment for those travelling to/from the north of the site rather than travelling on the Wombwell bypass.
- The shared cycle/footway will be of particular benefit to cyclists in terms of safety because it will encourage the removal of the majority of cyclists from the Wombwell bypass over its length and therefore reduce any potential conflict with vehicles travelling on the Wombwell bypass.
- Create a cycle permit scheme. Some schools operate a cycle parking permit scheme which is a contract drawn up between the school, the pupil and the parents, to set out the conditions for cycling to school and to obtain the parents' consent. Permit forms set out the school's cycling policy, while emphasising that the decision on whether the child is competent to cycle remains

with the parent. Forms can also include advice on safety and insurance and provide a record of the bicycle's make and serial number. Schools will need to decide what conditions they wish to attach to permits. For example these may include:-

- That the bicycle is roadworthy and has passed a maintenance check
- That the cyclist has completed an approved training course
- That the bicycle will be securely locked in an approved area
- That the cyclist will follow a 'good cycling code'
- Provide secure lockers to store cycling equipment and to reduce the number of books that children have to carry home.
- Cycling can be encouraged with special events at school such as a 'cycle challenge': children are encouraged to try a range of cycling skills around obstacles for example.

4.4 Walking

4.4.1 Both the residential areas of Darfield and Wombwell are at, or slightly above the preferred maximum walking distances of 2000m from the new school site, taken from the IHT Publication "Providing for journeys on foot".

4.4.2 With the existing pedestrian facilities and proposed mitigation measures there will be a good highway footpath network linking these residential areas with the proposed school site offering good opportunities for pupils to walk to school.

4.4.5 Proposed Initiatives

- Supplying reflective clothing/accessories to children at discount prices and to assess the need to change school uniforms to colours which are more visible in dark conditions.
- Provide locker space within the school to reduce the need for pupils to carry heavy books, instruments or materials when walking home.
- In order to facilitate the crossing of pedestrians over the Wombwell bypass, it is proposed to provide a Toucan crossing as shown on drawing 4071/002 in Appendix J of the Transport Assessment. Installation of pedestrian guard railings around the crossing adjacent to the Liitlefield Lane junction to encourage pedestrians to cross the Wombwell bypass at the proposed signalised crossing.
- As previously mentioned, an upgrade of the Trans Pennine Trail is proposed to a 3.5m wide cycle/footway providing a traffic free pedestrian and cycle access to the site.
- Also, proposed traffic free pedestrian and cyclist accesses from Pitt Street into the site will separate pedestrians from traffic entering and exiting the site and provide a safer pedestrian and cyclist

environment for those travelling to/from the north of the site rather than travelling on the Wombwell bypass.

- As previously mentioned, the speed limit on the A633 Wombwell bypass will be reduced from 50mph to 30mph over a length of approximately 600m. This will reduce vehicle speeds on the approach to the proposed Toucan crossing and provide a safer environment for pedestrians crossing the bypass
- The length of the speed reduction is also proposed to include a school zone.

5. CAR SHARING

5.1 Some schools have successfully encouraged parents who drive to school to car share. This can be particularly useful when children are traveling longer distances to school.

5.2 Another option for sharing the ride is a minibus. Some schools have made their own minibuses available to parents for the school run. Using a private minibus firm, funded by parents, can be expensive but has proved feasible in some circumstances.

6. TARGETS

6.1 It should be considered that targets are set to evaluate the success of the Travel Plan after 6 months of the school opening. This will allow time to assess the travel modes of the pupils to the new school.

6.2 The actual targets can then be set when the travel needs and the various modes of travel have been assessed.

7. MONITORING

7.1 It is considered that surveys should be undertaken on an annual basis to establish the success of the initiatives recommended in this Travel Plan and that the targets set have been or are being reached. This can be in the form of a hands-up survey as an exercise undertaken by pupils.

7.2 It is also considered that additional surveys on the satisfaction of pupils to the initiatives and whether improvements can be made should be carried out, again on an annual basis.

8. ACTION CHECKLIST

8.1 The following are measures which should be considered in the preparation of a School Travel Plan.

8.2 Travel awareness:

- Advise new pupils and parents on school travel policies and arrangements
- Include a safer routes map, school travel policies and arrangements in the prospectus
- Include school journey details in arrival packs sent to new families
- Set up school journey notice board
- Look at travel choices and safer routes to school as part of class work

8.3 Local Safety

- Develop traffic management proposals for pedestrian safety in the school area

8.4 Walking and Cycling

- Hold regular walk to school events
- Offer practical pedestrian training
- Create car-free entrances

- Hold cars back until pedestrians and cyclists have left school in safety
- Review the visibility of the school uniform
- Review homework timetable to check on how much children carry home
- Provide adequate storage for school books, cycling gear and outdoor clothing
- Install secure cycle shelters
- Offer on-road cycle training
- Advise on cycling safety and arrange regular cycle maintenance checks
- Set up a cycle permit scheme
- Hold regular cycling events

8.5 Public Transport

- Provide public transport information at school
- Explore options for new services, better routes and low fare promotions
- Introduce a code of behaviour for school bus users

8.6 Sharing the ride

- Set up parents' car sharing scheme
- Set up a parent-run minibus

8.7 Personal Safety

- Offer sessions for children and parents on personal safety

9. SUMMARY

9.1 This Framework School Travel Plan sets out the suggested initiatives to be included in a more detailed Travel Plan to be submitted in support of a full planning application for the development of the new Darfield / Wombwell school site.

Run Analysis

Parameter	Values
File Run	J:\..\Picady\Wombwell Bypass - Site Access (2011 + Development).vpi
Date Run	16 March 2007
Time Run	15:26:33
Driving Side	Drive On The Left

Arm Names and Flow Scaling Factors

Arm	Arm Name	Flow Scaling Factor (%)
Arm A	A633 Wombwell Bypass (North West)	100
Arm B	Site Access	100
Arm C	A633 Wombwell Bypass (South East)	100

Stream Labelling Convention

Stream A-B contains traffic going from A to B etc.

Run Information

Parameter	Values
Run Title	Advanced Learning Centre, Wombwell / Darfield Site, Barnsley 2011 + Development
Location	Site Access / A633 Wombwell Bypass
Date	15 March 2007
Enumerator	richard.spencer [PC46]
Job Number	4071
Status	Preliminary
Client	Barnsley MBC
Description	Preliminary PICADY capacity, queuing and delay model of alternative priority junction site access.

Errors and Warnings

Parameter	Values
Warning	No Errors Or Warnings

Geometric Data

Geometric Parameters

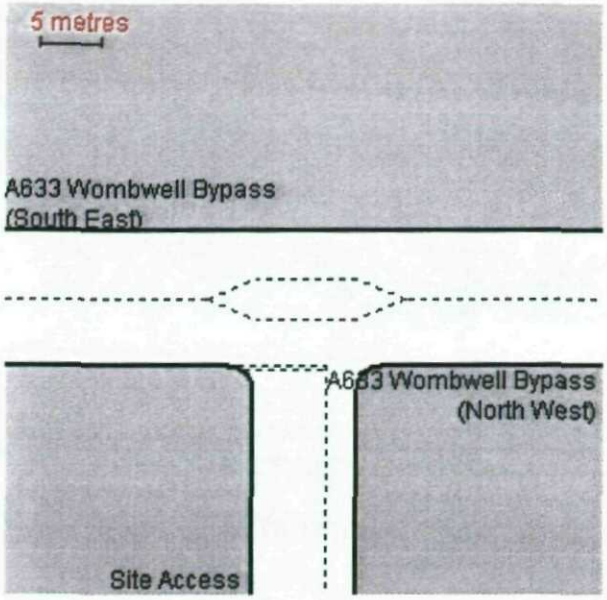

Parameter	Minor Arm B
Major Road Carriageway Width (m)	7.60
Major Road Kerbed Central Reserve Width (m)	0.00
Major Road Right Turning Lane Width (m)	3.50
Minor Road First Lane Width (m)	3.00
Minor Road Second Lane Width (m)	3.00
Minor Road Visibility To Right (m)	14
Minor Road Visibility To Left (m)	17
Major Road Right Turn Visibility (m)	250
Major Road Right Turn Blocks Traffic	Yes

Slope and Intercept Values

Stream	Intercept for Stream B-A	Slope for A-B	Slope for A-C	Slope for C-A	Slope for C-B
B-A	490.033	0.083	0.210	0.132	0.300
B-C	632.750	0.090	0.228	-	-
C-B	820.431	0.296	0.296	-	-

Note: Streams may be combined in which case capacity will be adjusted
These values do not allow for any site-specific corrections

Junction Diagram

Demand Data

Modelling Periods

Parameter	Period	Duration (min)	Segment Length (min)
First Modelling Period	07:45-09:15	90	15
Second Modelling Period	14:45-16:15	90	15

ODTAB Turning Counts

Demand Set: Advanced Learning Centre, Wombwell / Darfield Site, Barnsley 30/70
Modelling Period: 07:45-09:15

From/To	Arm A	Arm B	Arm C
Arm A	0.0	164.0	837.0
Arm B	88.0	0.0	38.0
Arm C	619.0	70.0	0.0

Demand Set: Advanced Learning Centre, Wombwell / Darfield Site, Barnsley - 30/70
Modelling Period: 14:45-16:15

From/To	Arm A	Arm B	Arm C
Arm A	0.0	63.0	722.0
Arm B	101.0	0.0	43.0
Arm C	599.0	27.0	0.0

Demand Set: Advanced Learning Centre, Wombwell / Darfield Site, Barnsley 70/30
Modelling Period: 07:45-09:15

From/To	Arm A	Arm B	Arm C
Arm A	0.0	70.0	722.0
Arm B	38.0	0.0	88.0
Arm C	619.0	164.0	0.0

Demand Set: Advanced Learning Centre, Wombwell / Darfield Site, Barnsley - 70/30
Modelling Period: 14:45-16:15

From/To	Arm A	Arm B	Arm C
Arm A	0.0	27.0	722.0
Arm B	43.0	0.0	101.0
Arm C	599.0	63.0	0.0

ODTAB Synthesised Flows

Demand Set: Advanced Learning Centre, Wombwell / Darfield Site, Barnsley 30/70
Modelling Period: 07:45-09:15

Arm	Rising Time	Rising Flow (veh/min)	Peak Time	Peak Flow (veh/min)	Falling Time	Falling Flow (veh/min)
Arm A	08:00	12.512	08:00	18.769	08:30	12.512
Arm B	08:00	1.575	08:00	2.363	08:30	1.575
Arm C	08:00	8.613	08:00	12.919	08:30	8.613

Heavy Vehicles Percentages

Demand Set: Advanced Learning Centre, Wombwell / Darfield Site, Barnsley 30/70
Modelling Period: 07:45-09:15

From/To	Arm A	Arm B	Arm C
Arm A	-	3.0	10.0
Arm B	3.0	-	3.0
Arm C	10.0	3.0	-

Demand Set: Advanced Learning Centre, Wombwell / Darfield Site, Barnsley - 30/70
Modelling Period: 14:45-16:15

From/To	Arm A	Arm B	Arm C
Arm A	-	3.0	10.0
Arm B	3.0	-	3.0
Arm C	10.0	3.0	-

Demand Set: Advanced Learning Centre, Wombwell / Darfield Site, Barnsley 70/30
Modelling Period: 07:45-09:15

From/To	Arm A	Arm B	Arm C
Arm A	-	3.0	10.0
Arm B	3.0	-	3.0
Arm C	10.0	3.0	-

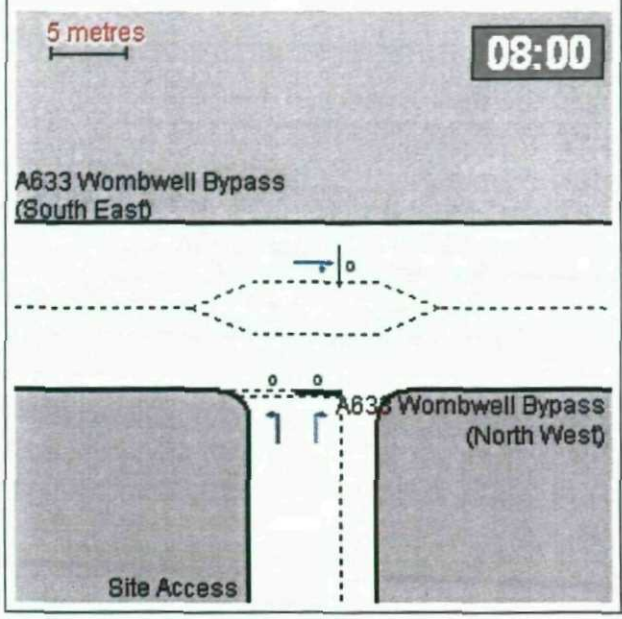

Demand Set: Advanced Learning Centre, Wombwell / Darfield Site, Barnsley - 70/30
Modelling Period: 14:45-16:15

From/To	Arm A	Arm B	Arm C
Arm A	-	3.0	10.0
Arm B	3.0	-	3.0
Arm C	10.0	3.0	-

Entry capacities marked with an '(X)' are dominated by a pedestrian crossing in that time segment.
In time segments marked with a '(B)', traffic leaving the junction may block back from a crossing so impairing normal operation of the junction.
Delays marked with '##' could not be calculated.

Overall Queues & Delays

Queueing Delay Information Over Whole Period

Demand Set: Advanced Learning Centre, Wombwell / Darfield Site, Barnsley 30/70
Modelling Period: 07:45-09:15

Stream	Total Demand (veh)	Total Demand (veh/h)	Queueing Delay (min)	Queueing Delay (min/veh)	Inclusive Delay (min)	Inclusive Delay (min/veh)
B-A	121.1	80.8	88.1	0.7	88.1	0.7
B-C	52.3	34.9	9.9	0.2	9.9	0.2

All	**2140.3**	**1426.9**	**55.3**	**0.0**	**55.3**	**0.0**

Delay is that occurring only within the time period.
Inclusive delay includes delay suffered by vehicles which are still queuing after the end of the time period.
These will only be significantly different if there is a large queue remaining at the end of the time period.

PICADY 5 Run Successful

PICADY

Run Analysis

Parameter	Values
File Run	J:\..\Picady\Wombwell Bypass - Site Access (2016 + Development).vpi
Date Run	16 March 2007
Time Run	15:22:15
Driving Side	Drive On The Left

Arm Names and Flow Scaling Factors

Arm	Arm Name	Flow Scaling Factor (%)
Arm A	A633 Wombwell Bypass (North West)	100
Arm B	Site Access	100
Arm C	A633 Wombwell Bypass (South East)	100

Stream Labelling Convention

Stream A-B contains traffic going from A to B etc.

Run Information

Parameter	Values
Run Title	Advanced Learning Centre, Wombwell / Darfield Site, Barnsley 2016 + Development
Location	Site Access / A633 Wombwell Bypass
Date	15 March 2007
Enumerator	richard.spencer [PC46]
Job Number	4071
Status	Preliminary
Client	Barnsley MBC
Description	Preliminary PICADY capacity, queuing and delay model of alternative priority junction site access.

Errors and Warnings

Parameter	Values
Warning	No Errors Or Warnings

Geometric Data

Geometric Parameters

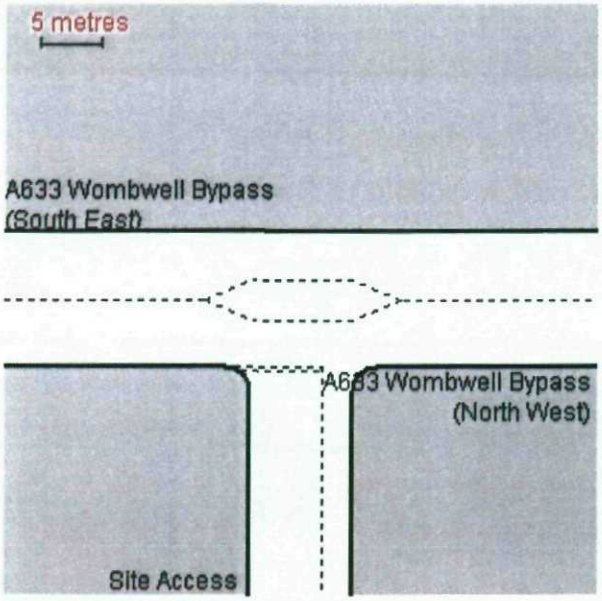

Parameter	Minor Arm B
Major Road Carriageway Width (m)	7.60
Major Road Kerbed Central Reserve Width (m)	0.00
Major Road Right Turning Lane Width (m)	3.50
Minor Road First Lane Width (m)	3.00
Minor Road Second Lane Width (m)	3.00
Minor Road Visibility To Right (m)	14
Minor Road Visibility To Left (m)	17
Major Road Right Turn Visibility (m)	250
Major Road Right Turn Blocks Traffic	Yes

Slope and Intercept Values

Stream	Intercept for Stream B-A	Slope for A-B	Slope for A-C	Slope for C-A	Slope for C-B
B-A	490.033	0.083	0.210	0.132	0.300
B-C	632.750	0.090	0.228	-	-
C-B	820.431	0.296	0.296	-	-

Note: Streams may be combined in which case capacity will be adjusted
These values do not allow for any site-specific corrections

Junction Diagram

Demand Data

Entry capacities marked with an '(X)' are dominated by a pedestrian crossing in that time segment.
In time segments marked with a '(B)', traffic leaving the junction may block back from a crossing so impairing normal operation of the junction.
Delays marked with '##' could not be calculated.

Overall Queues & Delays

Delay is that occurring only within the time period.
Inclusive delay includes delay suffered by vehicles which are still queuing after the end of the time period.
These will only be significantly different if there is a large queue remaining at the end of the time period.

PICADY 5 Run Successful
