Re: Root Identification  
Sample Origin: 2 Lambert Fold, Dodsworth, Barnsley,

The sample of roots taken from the above property and received by us on 06 February 2012, has been examined and identification appears to be as follows

| Reference | Depth | Species Identified       |   | Root Diameter | Starch       |
|-----------|-------|--------------------------|---|---------------|--------------|
| TP/BH1    | 0.75m | Monocotyledon spp.       | 1 | <1 mm         | None Visible |
| TP/BH1    | 0.75m | not a tree or shrub root | 2 | 1 mm          | None Visible |

**Comments:**

- 1 - Plus 2 others also identified as Monocotyledon spp.
- 2 - Three the same.

Monocotyledon spp. include palms, grasses and bamboo.

Signed MDM

Unless we are otherwise instructed in writing, the above sample material will normally be disposed of 3 years after the date of this report.

**Re:** Root Identification  
**Sample Origin:** 2 Lambert Fold, Barnsley, S75 3SX

The sample of roots taken from the above property and received by us on 18 February 2012, has been examined and identification appears to be as follows

| Reference | Depth    | Species Identified                                            |   | Root Diameter | Starch       |
|-----------|----------|---------------------------------------------------------------|---|---------------|--------------|
| TP/BH1A   | 1.2-1.6m | broadleaved species, too juvenile for positive identification | 1 | <1 mm         | Abundant     |
| TP/BH1A   | 1.2-1.6m | too decayed for identification                                | 2 | 1 mm          | None Visible |

**Comments:**

- 1 - Extremely juvenile; possibly *Quercus*/*Castanea* spp.
- 2 - Very rotted fragment of bark.

(*Quercus* spp. are oaks. *Castanea* spp. include sweet chestnut.)

**Signed** MDM

Unless we are otherwise instructed in writing, the above sample material will normally be disposed of 3 years after the date of this report.
