Hiya Gary

With regards to our telephone conversation –

The site is registered for connection to the copper network.

The internal cables you are currently using to connect to the phone network are sufficient to give the resident the option to go for standard broadband or FTTC (fibre to the cabinet).

Regards

Rich

Hi richard. Could you cast your eyes on this please and give me a call. Ignore the part about asbestos. Just need to know where we stand regarding broadband. Thanks. 07786396322.

Hi Both

Further to last meeting, the planning condition relating to highspeed broadband is:

Upon commencement of development details of measures to facilitate the provision of high speed full fibre broadband for the dwellings/development hereby permitted, including a timescale for implementation, shall be submitted to and approved in writing by the Local Planning Authority. The development shall be carried out in accordance with the approved details

They define full fibre as:

Definition:

What is full-fibre? Full-fibre networks use fibre optic cables to connect the exchange directly to each premises. Full-fibre connections are capable of delivering speeds greater than 1 gigabit per second (Gbps; 1 Gbps is equal to 1000 Mbps). Full-fibre networks are more reliable than copper-based networks and cheaper to maintain and operate. Full-fibre networks are also important for supporting high capacity mobile broadband networks, particularly future 5G networks. Full-fibre networks, also referred to as fibre-to-the-premises (FTTP) or fibre-to-the-home (FTTH), consist of fibre optic cables running from the local exchange directly to each premises. Fibre optic cables transmit data using light and can carry more data with faster speeds and significantly less signal loss with distance compared to copper cables.

Basically, if BT are putting this in, that's great. If not, we have a bit of work to do to satisfy the condition. If you can let me know what they are planning to do in the first instance, that would be great.

PS, the asbestos guy said he rang you Carl. Has he got back in touch?

Thanks

Spencer
