17th November 2014

OUR REF: CTIL_115815_TEF_41292_NA

Dear Chair of Governors,

RE: PROPOSED UPGRADE TO TELECOMMUNICATIONS RADIO BASE STATION INSTALLATION AT CTIL_115815_TEF_41292_NA SW ON THE ADOPTED FOOTWAY ON SUMMER LANE, WOMBWELL, BARNLEY, SOUTH YORKSHIRE, S73 8HD - (NGR E 439301 / N 403081)

Telefónica UK Limited has entered into an agreement with Vodafone Limited pursuant to which the two companies plan to jointly operate and manage a single network grid across the UK. These arrangements will be overseen by Cornerstone Telecommunications Infrastructure Ltd (CTIL) which is a joint venture company owned by Vodafone Limited and Telefónica UK Limited.

This agreement allows both organisations to:

- pool their basic network infrastructure, while running two, independent, nationwide networks
- maximise opportunities to consolidate the number of base stations
- significantly reduce the environmental impact of network development

Telefónica are in the process of upgrading their existing telecommunications radio base installation in the Wombwell locality. The purpose of this letter is to consult with you and seek your views on the operators' proposal before any planning submission is made. We understand that you are not always able to provide site specific comments; however, Telefónica are committed to consultation with communities on their mobile telecommunications proposals and as such would encourage you to respond.

Following agreement with the two operators, the equipment will be managed by a single operator, in this instance Telefónica. This will have little impact from a planning standpoint; however, it forms an important part of the agreement between the companies. It will also provide enhanced capacity for both operators' customers in the future, which will be especially important following the launch of the operators 4G networks in 2013.

As part of Telefonica's continued network improvement program, there is a specific requirement for an upgrade to the existing radio base station at this location. This will enable the site to be 4G capable and improve the 2G/3G capacity within the single network grid to meet the growing demand for high speed data access due to the growth of the smartphone and tablet devices market.

Mobiles can only work with a network of base stations in place where people want to use their mobile phones or other wireless devices. Without base stations, the mobile phones and other devices we rely on simply won't work.

Our technical network requirement is as follows:

**CTIL_115815_TEF_41292_NA SW ON THE ADOPTED FOOTWAY ON SUMMER LANE,
WOMBWELL, BARNSELY, SOUTH YORKSHIRE, S73 8HD - (NGR E 439301 / N 403081)**

The upgrade to the existing site is required to improve the 2G/3G capacity in the cell area and to enable the site to deliver 4G capability to the single grid network. This is in accordance with Telefónica's and Vodafone's agreement to jointly operate and manage a single network grid across the country whilst running two independent nationwide networks. This also accords with the National Planning Policy Framework which supports the expansion of the electronic communications networks, including telecommunications and high speed broadband. Upgrading this site will allow additional 2G/3G capacity in to the network and enable a new 4G service reducing the need for an additional telecommunications base station in the area and thus avoiding the proliferation of masts.

The proposals relate to the replacement of the existing 12.5m high slim-line mock effect Telegraph Pole supporting 3 no. antennas with a replacement 15m slim-line streetworks column supporting 3no. antennas and the installation of 4no. additional equipment cabinets and ancillary development thereto on THE ADOPTED FOOTWAY ON SUMMER LANE, WOMBWELL, BARNSELY, SOUTH YORKSHIRE, S73 8HD - (NGR E 439301 / N 403081).

Utilising an existing established telecommunications radio base station site is considered to be more sequentially preferable than the installation of a new ground based installation for the operators elsewhere within the cell area, which would lead to the proliferation of masts. As such, alternative sites have not been considered.

All Telefónica installations are designed to be fully compliant with the public exposure guidelines established by the International Commission on Non-Ionizing Radiation Protection (ICNIRP). These guidelines have the support of UK Government, the European Union and they also have the formal backing of the World Health Organisation. A certificate of ICNIRP compliance will be included within the planning submission.

In order to give you time to send your comments or request further information, we commit to allow at least 14 days before an application is submitted to the Local Planning Authority. This 14 day period starts from the date at the top of this letter.

We enclose a copy of our Consultation Plan and welcome any suggestions.

We look forward to receiving your response within 14 days of the date of this letter.

Yours faithfully

Our Ref: CTIL_115815_TEF_41292_NA

RE: Pre application consultation

Dear Sir / Madam

RE: PROPOSED UPGRADE TO TELECOMMUNICATIONS RADIO BASE STATION INSTALLATION AT CTIL_115815_TEF_41292_NA SW ON THE ADOPTED FOOTWAY ON SUMMER LANE, WOMBWELL, BARNSELY, SOUTH YORKSHIRE, S73 8HD - (NGR E 439301 / N 403081)

Telefónica UK Limited has entered into an agreement with Vodafone Limited pursuant to which the two companies plan to jointly operate and manage a single network grid across the UK. These arrangements will be overseen by Cornerstone Telecommunications Infrastructure Ltd (CTIL) which is a joint venture company owned by Vodafone Limited and Telefónica UK Limited.

This agreement allows both organisations to:

- pool their basic network infrastructure, while running two, independent, nationwide networks
- maximise opportunities to consolidate the number of base stations
- significantly reduce the environmental impact of network development

Telefónica are in the process of upgrading their existing radio base station installation in the Summer Lane area. We aim to work with you to progress a proposal that is both acceptable to your authority and meets Vodafone's and Telefónica's technical network requirements. This approach accords with Vodafone's and Telefónica's Best Practice Commitments to ensure consultation with Local Planning Authorities and other appropriate key stakeholders.

Following agreement with the two operators, the equipment will be managed by a single operator, in this instance Telefónica. This will have little impact from a planning standpoint; however, it forms an important part of the agreement between the companies. It will also provide enhanced capacity for both operators' customers in the future, which will be especially important following the launch of the operators' 4G networks in 2013.

As part of the continued network improvement program, there is a specific requirement for an upgrade to the existing radio base station at this location. This will enable the site to be 4G capable and improve the 2G/3G capacity within the single network grid to meet the growing demand for high speed data access due to the growth of the smart ware market including the smartphone and tablet type devices.

Mobiles can only work with a network of base stations in place where people want to use their mobile phones or other wireless devices. Without base stations, the mobile phones and other devices we rely on simply won't work.

This letter therefore invites the Local Planning Authority, in accordance with planning policy guidance and Best Practice Commitments, to enter into pre-application discussions with regard to our preferred site option prior to a formal planning submission. Several steps in the site identification process have already been undertaken. The Local Planning Authority mast register and our records of other potential sites have been reviewed, the policies in the Development Plan have been taken into account and we have examined the inter-operator site sharing database.

Our technical network requirement is as follows:

CTIL_115815_TEF_41292_NA SW ON THE ADOPTED FOOTWAY ON SUMMER LANE, WOMBWELL, BARNSELY, SOUTH YORKSHIRE, S73 8HD - (NGR E 439301 / N 403081)

The upgrade to the existing site is required to improve the 2G/3G capacity in the cell area and to enable the site to deliver 4G capability for both networks. This is in accordance with Vodafone and Telefonica's agreement to jointly operate and manage a single network grid across the country whilst running two independent nationwide networks. This also accords with the National Planning Policy Framework which supports the expansion of the electronic communications networks, including telecommunications and high speed broadband. Upgrading this site will allow additional 2G/3G coverage and capacity in to the network and enable a new 4G service reducing the need for an additional mast in the area and thus avoiding the proliferation of masts.

The proposals relate to the replacement of the existing 12.5m high slim-line mock effect Telegraph Pole supporting 3 no. antennas with a replacement 15m slim-line streetworks column supporting 3no. antennas and the installation of 4no. additional equipment cabinets and ancillary development thereto on THE ADOPTED FOOTWAY ON SUMMER LANE, WOMBWELL, BARNSELY, SOUTH YORKSHIRE, S73 8HD - (NGR E 439301 / N 403081).

Utilising an existing established telecommunications radio base station site is considered to be more sequentially preferable than the installation of a new ground based installation for the operators elsewhere within the cell area, which would lead to the proliferation of masts. As such, alternative sites have not been considered.

We look forward to receiving your comments on the preferred option identified above. We would also like to take this opportunity to extend an invitation to meet with you to discuss the proposal, should you consider this to be beneficial.

All Telefonica installations are designed to be fully compliant with the public exposure guidelines established by the International Commission on Non-Ionizing Radiation Protection (ICNIRP). These guidelines have the support of UK Government, the European Union and they also have the formal

backing of the World Health Organisation. A certificate of ICNIRP compliance will be included within the planning submission.

We would be grateful if you could advise us of any pending telecommunications applications or recent planning decisions in this particular area so these can be evaluated.

Finally, we would be interested in any local stakeholders or groups that you consider would like to know more about the proposals. For your information we will be similarly consulting the local ward Councillors within the Wombwell Ward together with the local MP M Dugher and the Manager of the Kings Oak Primary Learning Centre.

We enclose a copy of our Consultation Plan and welcome any suggestions.

We look forward to receiving your response within 14 days of the date of this letter.

Yours faithfully

17th November 2014

OUR REF: CTIL_115815_TEF_41292_NA

Dear Mr Dugher,

RE: PROPOSED UPGRADE TO TELECOMMUNICATIONS RADIO BASE STATION INSTALLATION AT CTIL_115815_TEF_41292_NA SW ON THE ADOPTED FOOTWAY ON SUMMER LANE, WOMBWELL, BARNSLEY, SOUTH YORKSHIRE, S73 8HD - (NGR E 439301 / N 403081)

You may be aware that Telefonica UK Limited has entered into an agreement with Vodafone Limited pursuant to which the two companies plan to jointly operate and manage a single network grid across the UK. These arrangements will be overseen by Cornerstone Telecommunications Infrastructure Ltd (CTIL) which is a joint venture company owned by Vodafone Limited and Telefonica UK Limited.

This agreement allows both organisations to:

- pool their basic network infrastructure, while running two, independent, nationwide networks
- maximise opportunities to consolidate the number of base stations
- significantly reduce the environmental impact of network development

This letter is sent to you in the pre-planning application consultation phase of the development for a mobile phone base station site and is simply intended to keep you informed and advised of the proposed development in your area prior to any planning application being submitted. However, if you do wish to submit comments or have been contacted by your constituents in relation to this matter and wish to send us comments on their behalf, please feel free to do so via the following address:

Community Consultation & EMF Enquiries, Building 1330 – The Exchange, Arlington Business Park, Theale, Berkshire, RG7 4SA.

Email: cmf.enquiries@cornerstonemobile.net

What follows is a summary of the proposal and some further information that might be of use.

Summary of the proposal

Telefónica are in the process of upgrading their existing telecommunications radio base installation in the Summer Lane area. The upgrade to the existing site is required to improve the 2G/3G capacity in the cell area and to enable the site to deliver 4G capability for both networks. This is in accordance with Vodafone's and Telefonica's agreement to jointly operate and manage a single network grid across the country whilst running two independent nationwide networks. This also accords with the National Planning Policy Framework which supports the expansion of the electronic communications networks, including telecommunications and high speed broadband.

The proposals relate to the replacement of the existing 12.5m high slim-line mock effect Telegraph Pole supporting 3 no. antennas with a replacement 15m slim-line streetworks column supporting 3no.

antennas and the installation of 4no. additional equipment cabinets and ancillary development thereto on THE ADOPTED FOOTWAY ON SUMMER LANE, WOMBWELL, BARNSELY, SOUTH YORKSHIRE, S73 8HD - (NGR E 439301 / N 403081).

Utilising an existing established telecommunications radio base station site is considered to be more sequentially preferable than the installation of a new ground based installation for the operators elsewhere within the cell area, which would lead to the proliferation of masts. As such, alternative sites have not been considered.

In line with Best Practice principles we have shared these details with local councillors, planning officers and schools within a 250m radius of the site.

ICNIRP Compliance

All Telefónica installations are designed to be fully compliant with the public exposure guidelines established by the International Commission on Non-Ionizing Radiation Protection (ICNIRP). These guidelines have the support of UK Government, the European Union and they also have the formal backing of the World Health Organisation. A certificate of ICNIRP compliance will be included within the planning submission.

Radio technology and health

Useful information sources on this include:

Code of Best Practice on Mobile Phone Network Development www.mobilemastinfo.com

National Planning Policy Framework www.communities.gov.uk

World Health Organisation – Electromagnetic Fields www.who.int/peh-emf/en

International Commission on Non Ionising Radiation Protection www.icnirp.de

I trust all is clear from the enclosed but if you have further questions on this or any other matter concerning this Vodafone and/or Telefónica proposal, please do not hesitate to contact us through Community Consultation & EMF Enquiries within 14 days from the date of this letter.

We look forward to receiving any comments you may have on the proposal.

Yours sincerely

Jennie Hann BSc MRTPI MTPL
